

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

TO MY MOTHER

PREFACE

No archaeological investigation is begun or successfully terminated in Princeton University which has not been inspired and made possible by the wisdom and kindness of Professor Allan Marquand. From the day when the present work was commenced, through the years of compilation and writing, Professor Morey has done all in his power to make it of scholarly value, and in the last stage of preparation, the author's absence from the University has increased his obligation to his colleagues, for Professors Marquand and Morey have read all the proof and attended to every detail of the publication. For the aid here acknowledged and for that which no words can acknowledge, the author now voices his gratitude to these two friends. He also wishes to express his thanks to Professor Butler, whose intimate knowledge of the Christian Orient has been freely placed at his disposal, and to the other members of the Department of Art and Archaeology, who have helped him in many generous ways. The illustrations are nearly all from tracings whose originals are cited in the notes or Tables; where plates or figures have been reproduced directly from other publications, acknowledgment has been made in the List of Illustrations.

E. BALDWIN SMITH.

PART I

EARLY CHRISTIAN ICONOGRAPHY

I

INTRODUCTION

In the course of the following pages I have attempted to attain three results: in the first place to group, on a basis of iconography, the monuments of early Christian art into schools; then, as a result of this formation of distinct and consistent art centres, to prove the provenience of certain monuments whose origin has been vigorously disputed; and lastly, I have sought in the Second Part to establish a school of early Christian ivory carvers in Provence. In treating early Christian art I have understood the term "early Christian" to include the artistic efforts of Christianity from its inception down to the ninth century, when Byzantine art was formulated and generally adopted throughout the East. Thus I have endeavored to distinguish, wherever it was possible, the iconographic types of Egypt, Syria, Asia Minor, Italy, and Provence and, on the basis of these types, have built up the artistic centres which flourished on the shores of the Mediterranean during the first eight centuries of our era. With the exception of the Provençal, the schools have been constructed wholly from the iconography and the scenes used have been only those that occur on the monuments which I would attribute to Provence. ✓

Although many brilliant works have been written on the subject,¹ the art of the early Christian period is still so badly confused by many conflicting theories that any systematic study in the field must go contrary to some authorities. Ever since the predominance of Rome in the formation of Christian art was questioned by Strzygowski² the problem of the origin, spread, and development of this art has become increasingly diffi-

¹ See Dalton's *Byzantine Art and Archaeology* for a bibliography.

² Strzygowski, *Orient oder Rom*, 1901, Leipzig.

cult. While the position of Rome has been more and more weakly defended as new finds and excavations have shown that the great creative centres of Christian art were in the Orient, the question has become involved by the contradictory viewpoints from which the archaeologists have viewed the characteristics of these Eastern schools and by the confusing manner in which they have attributed the same or similar monuments to different schools. The principal reason for this confusion has been the lack of sufficient monuments of known origin from which to construct the schools. Other causes, however, lie not only in the gradual transformation through which Christian art went in passing from a Hellenistic to an Oriental phase, but also in the uniform and vaguely defined schools to which the scholars attribute the monuments, and in the unsystematic use of iconography.

The change that took place in Christian art as it discarded Hellenistic models and adopted Oriental forms has complicated the problem. At the time when Christianity was born, an Eastern cult in an Eastern land, the Mediterranean world was under classical domination. The only forms of expression which were available to the new faith were Hellenistic and, therefore, Christianity for the first four centuries of its existence followed Hellenistic models in its literature and art. In the fifth century a change took place in the Empire, the state crumbled under the barbarian invasions, the centre of gravity was shifted from Italy to the East, and the classical system which had until then unified the civilized world was shattered. Hellenism was dying, the dormant spirit of the Orient re-awakened. Great waves of national feeling swept over the Eastern provinces with the result that in literature and in art the old, native traditions began to assert themselves against the waning classicism. For about four centuries Hellenistic Christianity had accepted the canonical Gospels and by symbolism in art had sought to portray in classical forms the Biblical lessons. With the dissolution of classical restraint, however, the East turned to its apocryphal versions of the New Testament stories wherein were related more personal and narrative accounts of Jesus and the Virgin. These apocryphal gospels became a new source for artistic representation and the new scenes which were then created were expressed in indigenous Eastern methods. In Asia Minor, Syria, and Egypt the art took on the character of its Sassanian, Assyrian, and Nilotic prototypes. The figures tended to become stylistic, hieratic, and frontal; the substantial back-

grounds of Hellenistic design were eliminated; the composition began to set into hard and fast formulas; and the execution became linear and coloristic in treatment.

The Christian art of the Hellenistic period, with general classical and canonical models, was strikingly homogeneous throughout the Mediterranean and while the forms and the types of the new art, like the religion itself, were probably first established in the great Hellenistic cities of the East, they were at an early date adopted at Rome and became the traditional style of the West. With the assertion of Oriental tendencies in the fifth century art broke up into local schools throughout the Eastern provinces. No sharp line of demarcation, however, divides the Hellenistic from the Oriental and it was only gradually, and often only in part, that the change in Christian art took place. The centres of Hellenistic art, like Antioch, Alexandria, and Ephesus, were not invariably the centres of the indigenous arts of the countries. In Syria the artistic activity shifted to Palestine and in Egypt it passed from Alexandria to the monastic centres in the Thebaïd. Thus an endless confusion arises when one attempts to unravel the threads of early Christian art while it was passing through its period of readjustment.

The solution of the problem can only come when archaeologists agree on the characteristics, the boundaries, and the limitations of the different artistic centres. At present the monuments, after the Hellenistic period, are variously assigned to Constantinople, Asia Minor, Syria, Palestine, Upper Egypt, and the eclectic school of Ravenna. In many cases they are also attributed in a general way to broader divisions, Syro-Anatolian, Syro-Palestinian, Syro-Egyptian, and Palestinian-Coptic; and in the West, which the Orient soon invaded, minor places, as Milan and Monza, are cited as productive. From these possibilities each authority, after his own conception of their character and in many cases after his own intuition, has built up by attribution his own set of schools. Unless, therefore, the student treads carefully through this maze, the result can only be greater chaos.

The baffling nature of these Eastern schools is clearly realized when a single monument is studied from the various authorities. No more important example of early Christian art exists than the famous ivory chair at Ravenna, which is supposed to have been the cathedra of the Archbishop Maximianus. It has been attributed to nearly every artistic centre. About

fifty years ago it was claimed by Labarte³ that the chair was commenced at Constantinople and finished at Ravenna by Greek artists. Its origin in Ravenna has been supported by Stuhlfauth,⁴ while Venturi,⁵ without denying its Byzantine origin, preferred to consider it a work analogous to the mosaics of Santa Maria Maggiore at Rome. Of recent years Strzygowski,⁶ who has perhaps written most on the subject, attributed it to Antioch. Its Alexandrian origin, however, supported by Ainaloff,⁷ Diehl,⁸ Leclercq,⁹ and Graeven¹⁰ has been most widely accepted. Dalton leaves the choice open between Alexandria and Antioch.¹¹

While it is evident that the establishment of these schools by attribution is a difficult and baffling problem, the lack of uniformity in the results is partly due to the unsystematic use that has been made of the means of attribution. These are mainly style and iconography. Of the two I am inclined to believe that style, except in the Palestinian and Coptic schools, is the less reliable. This is certainly true when the monuments preserve to any marked degree a trace of the rather uniform Hellenistic tradition. The iconography, however, which was dependent on indigenous customs, local liturgies, distinctive ceremonies, and special apocryphal gospels, tended to formalize into types and become peculiar to the separate artistic centres. Even when these resultant types and the use of particular scenes in specific localities were transmitted from one centre to another at the hands of itinerant artists, a study of the local customs, liturgies, apocryphal gospels, and monuments as a whole will often locate the centre from which the type emanated and will help to disclose the lines of inter-development along which the schools progressed. Too often, however, the iconography, as well as the style, has been used by writers in a small and partial way. An attribution is made on a few iconographic types and stylistic features; the attribution is then used independently as an established fact for further attributions. Since many of the schools preserved certain features in common and since there was inevitably an interchange

of iconographic types, this method makes possible an unlimited addition of monuments to almost any artistic centre and assures no uniformity in the "centre" when "established." In all cases the ultimate soundness of attributions must depend on comparison with those monuments which are known to have come from particular regions.

The nuclei about which the schools are to be constructed are often very meagre. For Asia Minor or the proto-Byzantine "school" we have the Sidamara type of sarcophagi,¹² the Rossano Gospels,¹³ the Sinope fragment of Matthew,¹⁴ and possibly the mosaics of the Church of the Holy Apostles at Constantinople as they are described by writers of the tenth and twelfth centuries.¹⁵ Save for the fact that the Byzantine types appear to have been derived from the scenes of the Rossano Gospels, the Gospels themselves were only attributions until the Sinope fragment was discovered. The Rabula Gospels,¹⁶ certain miniatures of the Etschmiadzin Gospels,¹⁷ the Syrian Gospels of the sixth century from Mardin in the Bibliothèque Nationale at Paris, and the decoration of the Syrian churches give the basis of the Syrian school wherein the transitional, semi-Hellenistic tradition is represented by the Rabula Gospels and the Oriental tradition by the Etschmiadzin miniatures. The style and types of the Palestinian school are exemplified by the Monza phials¹⁸ from the Holy Land, and by what is known of the mosaics of the Churches of the Nativity and the Ascension.¹⁹ For Upper Egypt we have the frescoes of Antinoë,²⁰ Bawit,²¹

el Bagawat,²² the miniatures of the World Chronicle,²³ the covers of the Freer Gospels,²⁴ the decorative stuffs and minor objects from Akmim,²⁵ and excavations at other sites.²⁶ For Alexandria the catacomb frescoes,²⁷ the numerous pieces of wood and ivory carving in the Cairo, Berlin, and Paris Museums, and the compositions in the miniatures of the Cosmas Indicopleustes²⁸ are characteristic. In the West at Ravenna are the sarcophagi and mosaics,²⁹ at Rome the catacomb frescoes,³⁰ the mosaics,³¹ and sarcophagi,³² and for Provence we have only the sarcophagi.

The schools (or rather groups, for in many cases I have not attempted to locate certain types) which I have constructed from these monuments are the Hellenistic, the Oriental-Hellenistic, the Syrian, the Alexandrian-Coptic, the Palestinian-Coptic, the Provençal, and the proto-Byzantine. The work at Ravenna, which is not uniform, was found to be eclectic and I have only sought to show the origin of some of the iconographic types occurring there. The classification, with the exception of the Provençal group, has been made up largely on the basis of iconography and, in order that I should not use this means in a partial or limited way, I have taken the scenes occurring on those monuments which I would attribute to Provence and, by grouping together all the examples of these scenes according to the types, I have attempted to let them fall naturally into whatever groups they would. In this way I thought if there was trustworthy evidence in the iconography, as I believed there was, the schools would preserve a marked consistency. For this purpose I have used the classified tables in the back of the book, in which the more complicated scenes, showing many and varied types, come out more clearly. The dates assigned to the monuments are for the most part those which have been generally

accepted by the authorities. In other cases I have endeavored to fix the period of execution on the basis of the evidence available. While sometimes it has been necessary to accept theoretical attributions, I have in the main been able to evade the danger of building up my schools from one attribution to another and from forcing the attributions on only a few stylistic and iconographic analogies.

The definition, by the method above described, of the schools of early Christian art has isolated the iconography of a group of ivories which I have assigned to Provence. The style as well as the iconography of this group shows such a peculiar mixture of the Hellenistic art of Rome and the Oriental types of the East that they do not fit into any of the schools already recognized. By comparing the iconography and style of these ivories with the sarcophagi of Provence, which manifest the same eclectic blending of Hellenistic traditions and Oriental types as occurs on the ivories, I have been able to point out such analogies as prove the existence of a school of ivory carvers in Provence.

II

THE VIRGIN IN THE TEMPLE

Monuments:

- | | |
|--|-------------------|
| (1) Relief in crypt of St. Maximin, V Century | } Provençal Group |
| (2) Ivory book covers, Milan cathedral, c. 500 | |
| (3) Werden casket, S. Kensington, VI Century | |

The representations of the Virgin in the Temple are peculiar in the sixth century to that group of ivories whose origin in southern Gaul will become evident in the course of the discussion of this and succeeding scenes. I shall hereafter refer to it as the Provençal group. That the scene on the Milan book cover¹ represents the Virgin in the Temple (Fig. 1) is not open to doubt, although it has been interpreted as the Holy Women at the Sepulchre, after the account in John. Such an interpretation is impossible when the costume of the Virgin is considered. Instead of being wrapped in a long mantle and heavily veiled, in token of grief, as are all the Holy Women in the scenes of the Visit to the Sepulchre,

¹ Garr., *op. cit.*, VI, pl. 455.

the Virgin is depicted as a young girl elegantly clad in a long gown, bound at the waist by a girdle and handsomely enriched with heavy embroidery around the neck and down the front of the skirt. Her hair, instead of being bound in mature manner, is arranged in a most youthful and modish

FIG. 1. MILAN: CATHEDRAL, IVORY BOOK COVERS. THE VIRGIN IN THE TEMPLE.

fashion. Never in the sixth century or later would one of the mourning women, sadly visiting at dawn at the tomb of the Savior, have been represented as a young, handsomely clad maiden, as is the female figure on the Milan ivory.

Furthermore, this interpretation is confirmed by the scene on the Werden casket² in the South Kensington Museum (Fig. 2), which in all scenes that also occur on the Milan covers almost duplicates their iconography. Although the representation and arrangement of the figures of the Virgin and the angel, as well as the odd little temple, are identical on the two ivories, there is introduced on the Werden casket a priest reading by the steps of the temple. Aside from this difference, the two scenes are so much alike as to necessitate the same interpretation. The scene on the Werden casket must be taken as a representation of the Virgin in the Temple, not only because of the introduction of the priest, but also because the range of its scenes covers only the early life of the Virgin; hence the scene on the Milan ivory must depict the same subject.

Interpreted thus, the episode appears to be derived from the account in

² Garr., *op. cit.*, VI, pl. 447/1.

the apocryphal gospel of Pseudo-Matthew. While the canonical Gospels do not treat the early life of the Virgin, both the Protevangelium of James³ and the Gospel of Pseudo-Matthew⁴ relate that from the age of three Mary was employed in the temple in the service of the Lord. Whereas the Protevangelium gives the main facts of her presentation in the temple and of her subsequent life there, the Gospel of Pseudo-Matthew, in its detailed narration not only of the presentation, but also of the devout life which Mary

FIG. 2. S. KENSINGTON: VICTORIA AND ALBERT MUSEUM, IVORY CASKET. THE VIRGIN IN THE TEMPLE.

led in the temple, reflects more clearly the full significance attached to this episode by the Eastern church and later by the church of Gaul. It is also the only account that explains the presence of the angel in the composition. Moreover, in its dependence on this gospel I do not feel that the scene represents the Presentation in the Temple, as Leclercq says,⁵ so much as the Virgin's actual service in the temple. Neither of the apocryphal gospels mentions an angel as having led the child to the temple. Yet on both the ivories the Virgin is represented looking at an angel who directs her gaze to a star hanging above the temple. With this variation from the text it does not seem justifiable to explain the absence of her parents on the ground of lack of space, as Leclercq does in considering this scene an Entry into the Temple. In my opinion the scene depicts the Virgin during her service in the temple, after the account of Pseudo-Matthew, where we read: "At the age of three years she walked with a step so sure, she spoke so perfectly, and put so much ardor into praising

³ Michel, *Évangiles apocryphes*, I, p. 17. ⁴ Michel, *op. cit.*, p. 73.

⁵ Leclercq in Cabrol's *Dictionnaire d'archéologie chrétienne et de liturgie*, s. v. "Apocryphes," col. 2557.

God, that one would not have taken her for a child, but for a grown person."⁶ We also read that "she did not cease to pray until the moment when the angel of the Lord appeared to her; she received nourishment from his hand; and she learned better and better how to praise God."⁷ Further on, the account relates: "Often angels were seen with her and she obeyed them with the greatest affection."⁸

This scene of the Service of the Virgin in the Temple, which does not appear on the monuments of the East, may be associated directly with Provence. When the crypt of the church of St. Maximin was unearthed there was brought to light an inscribed slab (Fig. 153) of the fifth century. On this slab⁹ occurs a representation of the Virgin in the Temple which is labelled by an inscription reading:

MARIAVIRGO
MINESTERDE
TEMPVLOGEROSALE

While the representation on this relief, in which the Virgin stands in the attitude of an orant, does not recall the scene on the ivories, it shows that the subject, which must have been drawn from apocryphal sources, was known and used in the art of Provence. It was not used, as far as we know, by the early Christian artists of any other locality. The dependence of the scene of the two ivories on the Gospel of Pseudo-Matthew, which was a Western rendering of an Oriental gospel, sustains the connection with the West. A feast¹⁰ of the Virgin existed in Provence as early as the sixth century. In Syria, whence Provence drew so many elements of its Christian culture, a particular liturgy¹¹ had been conceived in memory of the life which Mary spent in the temple preparing herself to be the mother of the Saviour; in Provence itself her cult was evidently popular enough to create a special scene commemorative of her preparation in the temple.

The Annunciation at the Spring, when an angel of the Lord first appeared unto Mary, has always been a rare scene in Christian art. So far as the existing examples of the scene throw any light on the question, it seems to have been peculiar, during the early Christian period, to the ivories which we assign to Provence, although it may have been introduced from the East, since we find it used in the ninth century in Byzantine manuscripts. Though it is true that the scene, as Dalton says,¹ "is not favored by later Byzantine artists," there are, none the less, several examples after the ninth century.² It appears in a Greek Gospel of the eleventh century (gr. 74) in the Bibliothèque Nationale, Paris³ (Fig. 3), in the

FIG. 3. PARIS: BIBL. NAT., MS. GR. 74. THE ANNUNCIATION AT THE SPRING.

Homilies of the Monk Jacobus in the Bibliothèque Nationale, Paris,⁴ among the mosaics of Daphni,⁵ and the mosaics of the church of Kahrié Djami at Constantinople.⁶

The scene in its whole history does not vary materially from the earliest examples. On the Milan (Fig. 4) and Werden (Fig. 5) ivories the Virgin kneels at the fountain to fill her pitcher as the angel accosts her from be-

hind; the Virgin, startled by the heavenly messenger, pauses in the act and turns her head in the direction whence the voice comes. Likewise, on the two ivories the fountain is represented as a spring gushing from a crevice in the rock.⁷ The terra cotta medallion in the treasury of the

FIG. 4. MILAN: CATHEDRAL, IVORY BOOK COVERS. THE ANNUNCIATION AT THE SPRING.

FIG. 5. S. KENSINGTON: VICTORIA AND ALBERT MUSEUM, IVORY CASKET. THE ANNUNCIATION AT THE SPRING.

Royal Basilica at Monza shows a scene of the same order as that on the ivories,⁸ at the right is represented a tree from whose roots flows the spring and kneeling before the spring with a vase in her hand is the Virgin, who turns her head in surprise to the angel. The date of this medallion, however, has been put as late as the eighth century, and the character of the work indicates a Palestinian origin.

As to the Provençal origin of the two examples on the ivories, the scene itself offers no evidence. It would seem that the rendering, as in the case of so many of the other scenes, was drawn rather from the Gospel of

⁷ Stuhlfauth, *Die altchristliche Elfenbeinplastik*, p. 70, says that an Annunciation at the Spring occurs on a sarcophagus of Syracuse (Garr., *op. cit.*, V, pl. 365/1). The scene to which he refers is essentially different from any other examples of the Annunciation, for it shows a woman kneeling to draw water from a spring which rushes forth from the side of a mountain on whose summit is the head of a bearded man, while behind the woman stands a man stretching forth his hand in a gesture of command. Garrucci (*op. cit.*, p. 95) calls the scene Moses Striking Water from the Mountain and such it seems to be; as he says, it was not customary during the fourth century to personify God by a human head, whereas it was traditional to personify mountains and rivers in this manner. The personification, therefore, is to be understood as Mt. Horeb and the gesture of the man, as also the posture of the woman, are to be explained accordingly.

⁸ Leclercq, in Cabrol's *Dictionnaire d'archéologie chrétienne et de liturgie*, s. v. "Annonciation dans l'art," col. 2262, fig. 765.

Pseudo-Matthew than from the Protevangelium of James, which are the only two texts mentioning this annunciation. While the Protevangelium only speaks of a *voice* having accosted her,⁹ the Gospel of Pseudo-Matthew says that "the angel of the Lord" *appeared* to the Virgin while she was at the fountain filling her pitcher.¹⁰ This dependence in Provence on the apocryphal Gospel of Pseudo-Matthew will become evident as we proceed.

IV

THE NATIVITY

The representations of the Nativity are usually classified into two large divisions: The Western type which, after the Gospel narratives, depicts the event in a shed sheltering a manger, and the Eastern type which follows the apocryphal accounts and represents the Birth either in the open or in a cave. Although this rough classification may aid in distinguishing the monuments of the East from those of the West, a more accurate and practical division may be made by considering other features in the manner of representing the scene of the Nativity during the early Christian period. The main divisions of this reclassification are the Hellenistic type, the Oriental-Hellenistic, the Alexandrian-Coptic, the Palestinian-Coptic, and the Byzantine type. The Hellenistic type is actually an Adoration type because, in addition to the Nativity proper, the scene includes an Adoration either of the ox and the ass, of the shepherds, or of the Magi. This Hellenistic type of the Adoration is characteristic of the monuments of the West, although with certain variations it occurs on several later Eastern monuments (and one early one) which are classified under the head of the Oriental-Hellenistic type. Another reason for calling this Western method the Adoration type is that the artists of the Hellenistic period of Christian art, especially in the West, were primarily concerned with symbolizing the universal worship which was accorded the Saviour by Jews, Gentiles, and the natural world. The Adoration type may be divided into five groups, each characterized by special features of iconography.¹

⁹ Michel, *op. cit.*, p. 23.

¹⁰ Michel, *op. cit.*, p. 87.

¹ Schmid, *Die Darstellung der Geburt Christi*, Stuttgart, 1890; in this treatise the author has carefully gathered together a large number of examples and in the case of the Western scenes has successfully grouped them according to the variations in type.

HELLENISTIC OR "ADORATION" TYPE.

Group I. *Adoration of Ox and Ass alone.*

In this first group only the ox and the ass do homage to the new born Babe. The earliest example is in a fresco in the catacomb of S. Sebastiano (Fig. 6) and dates from the fourth century.² That the scene is rather a symbolic than a literal representation of the Birth is shown by

FIG. 6. ROME: S. SEBASTIANO, FRESKO. THE ADORATION OF THE OX AND ASS.

FIG. 7. MILAN: SARCOFAGUS. THE ADORATION OF THE OX AND ASS.

the introduction of the nimbed bust of Christ above the crib, where the animals worship the young Child, and by the absence of the Virgin and Joseph, or other distinguishing features which would mark it as an actual event. The other example of this group is in the tympanum of the end of a sarcophagus cover at Milan.³ In this scene (Fig. 7) the Christ Child is depicted lying in His crib with the ox and the ass kneeling in adoration at His head and feet.

Group II. *Introduction of the Shepherds.*

Again in this symbolic manner, before there seems to have been any attempt to localize the scene in a manger, we have three sarcophagi of Rome⁴ on which (Fig. 8) the Adoration of the Shepherds is joined to that of the animals. The fact that the Christ Child in two of these examples is on an altar and in the other lies on the ground, while no other figures save the two shepherds and the animals are present, shows that it

To him I am indebted for the sub-groups of the Adoration type. Other works to be consulted on the Nativity are: Heisenberg, *Grabeskirche und Apostelkirche*, II, p. 234 sq.; Noack, *Die Darstellung der Geburt Christi in der bildenden Kunst*, Darmstadt, 1894; Dalton, *Byzantine Art and Archaeology*, p. 653.

² See Table I, no. 1.

³ Table I, no. 2.

⁴ Table I, Group 2.

was the idea of worship rather than of birth which the artists were seeking to convey.

Group III. *Introduction of the Shed.*

In this group the same features are preserved as in the preceding groups without the addition of any new figures to the composition; the

FIG. 8. ROME: SARCOPHAGUS. THE ADORATION OF THE ANIMALS AND SHEPHERDS.

FIG. 9. ROME: SARCOPHAGUS. THE ADORATION IN A MANGER-SHED.

only difference is that the Child in His crib is placed under the traditional Western shed (Fig. 9). On the three⁶ sarcophagi of this group, as on all the remaining sarcophagus representations, the Babe is represented in a manger which assumes the form of what Schmid⁶ calls the "Roman crib," a child's basket higher at one end than at the other.

Group IV. *Introduction of the Virgin.*

The seated Virgin is added to the scene. Save for this addition of the figure of Mary, who is represented sitting apart from the manger where

FIG. 10. MANTUA: SARCOPHAGUS. THE ADORATION, WITH THE VIRGIN.

the Child lies (Fig. 10), the sarcophagi of the fourth group show the same scene as those of the third.⁷

⁵ Table I, Group 3.

⁶ Schmid, *op. cit.*, p. 83.

⁷ Table I, Group 4.

Group V. *Introduction of the Magi.*

On the sarcophagi⁸ of this group the Adoration of the Magi is added to the Adorations of the Ox and Ass, and of the Shepherds, already present in the type. On all these examples, with only one exception,⁹ the Adoration of the Ox and the Ass as well as that of the Shepherds is preserved in the composition (Fig. 11), although the shepherds are reduced to one. These sarcophagi are anterior in date to the middle of the fourth

FIG. 11. ROME: SARCOPHAGUS. THE ADORATION, WITH THE MAGI.

century,¹⁰ for in their peculiar combination of the Adoration of the Magi with the Birth they reflect the usage of the church in Rome, which up to the middle of the fourth century celebrated the Nativity along with Epiphany on January 6. About 350 A.D. two distinct and separate feasts were established.¹¹

Group VI. *The Provençal Type.*

This division of the Western Adoration type of the Nativity is repre-

FIG. 12. MILAN: CATHEDRAL, IVORY BOOK COVERS. THE NATIVITY, ADORATION TYPE.

sented by that group of ivories which I have assigned to an early Christian school of southern France, consisting of the Milan book covers¹² (Fig.

⁸ Table I, Group 5.⁹ Table I, no. 19.¹⁰ See *Adoration of the Magi*, Group II, page 42.¹¹ Schmid, *op. cit.*, p. 53.¹² Table I, no. 21.

12), the Werden casket¹³ in the South Kensington Museum (Fig. 13), the ivory fragment in the Nevers Museum (Fig. 164),¹⁴ and possibly a pyxis at Rouen.¹⁵ The same type occurs on a book cover in the Bodleian Library at Oxford¹⁶ (Fig. 169), which is frequently grouped with the Milan covers as a work of early Christian art, but which is really a Caro-

FIG. 13. S KENSINGTON: VICTORIA AND ALBERT MUSEUM, IVORY CASKET. THE NATIVITY, ADORATION TYPE.

lingian ivory dating shortly before or after 800.¹⁷ In nearly all the scenes that the Bodleian cover has in common with the Milan covers, the Carolingian work continues their curious iconography.

The scene on the Milan ivory shows Mary and Joseph sitting in a shed on either side of a manger, where the ox and the ass adore the Christ Child. While the distinguishing feature of the Milan, Werden, and Bodleian ivories which separates the scene from the other Western representations is the presence of Joseph with a curiously shaped carpenter's saw in his hand, it is the form of the crib which binds all the ivories together into a group. On the sarcophagi a marked type of crib was represented which conformed to the regular Roman cradle; here, on the ivories, is a simple and yet distinct manger built up of stones or brick, much like that of the Alexandrian-Coptic group (IX), but distinguished by being covered with hay or some soft material, the folds of which radiate from the Child as He lies upon it. The scene on the Milan cover is so closely paralleled on the Werden casket and the Bodleian cover that the three are undoubtedly bound together thereby, but on the Nevers fragment (Fig. 164) there is left of the type only the same form of manger with its radiat-

¹³ Table I, no. 22.

¹⁴ Table I, no. 20.

¹⁵ Table I, no. 24; this scene is less Provençal in type than it is Oriental-Hellenistic. In all probability the pyxis was executed in Egypt.

¹⁷ See *Bodleian Ivory*, p. 248.

ing cover, and the ox and the ass. The fact, however, that the scene on the Nevers ivory (which is a fragment of a five part diptych carved sometime before the Milan and Werden ivories) has been broken in two, accounts for the absence of Joseph and the Virgin, who must have been represented in the missing half of the panel.¹⁸

Not only are there no other traditional figures which might have completed the scene, but such an assumption as to the missing half of the panel is sustained by the representation on the Carolingian book cover in the Bodleian Library. This later ivory copied its iconography from an ivory fragment in the Berlin Museum, which in its turn was a part of the same or a similar early Christian diptych as the Nevers fragment (see p. 237) and it depicts the same type of the Adoration of the Ox and the Ass with Joseph and the Virgin crowded into the corners of the composition.

The Adoration Type and Pseudo-Matthew

The most likely textual sources for the Adoration type are the accounts of Matthew and Luke, and for the West in the fifth century the apocryphal Latin Gospel of Pseudo-Matthew. Regarding the Birth, the account of Matthew (i, 25) is too colorless to suggest a type. Furthermore, it fails to mention either the Adoration of the Ox and the Ass or the Adoration of the Shepherds, but in the second chapter tells of the coming of the Wise Men out of the East and says that "when they were come into the *house* they saw the young Child with Mary his mother, and fell down, and worshipped him." St. Luke (ii, 1-7) is more explicit and, after telling of the journey to Bethlehem and the birth of the Babe, says that Mary "laid him in a *manger*." Although he omits the Adoration of the Ox and the Ass and fails to mention the coming of the Wise Men, he dwells (ii, 8) on the summoning of the shepherds and writes that they "found Mary, and Joseph, and the babe lying in a *manger*." The Gospel of Pseudo-Matthew is the most interesting of these texts, for it is the only account, either canonical or apocryphal, which includes the Adoration of the beasts. It is, as is pointed out in the Introduction to Part II, a Latin adaptation from Jewish-Christian and Gnostic sources, written at some time in the fifth century.¹⁹ It agrees at

¹⁸ See *Nevers Ivory*, p. 241.

¹⁹ Michel, *op. cit.*, p. XXI.

the outset with the purely Oriental apocryphal books and relates that the time for the delivery came while Mary and Joseph were on the way to Bethlehem and Mary went "into a cavern."²⁰ Although the writer makes no mention of the shepherds going to worship at the crib of the Saviour, he gives a careful account of the Adoration of the Magi and inserts a description of the Adoration of the Ox and the Ass. We read that "On the third day after the birth of our Lord Jesus Christ, the most Blessed Mary went forth *out of the cave*, and entering a *stable*, placed the Child in the manger, and the ox and the ass adored Him." "And Joseph and Mary lived in this place with the Child for three days."²¹ The Western scenes, however, of the Adoration type already had in the account of Luke a good source for the shed and a source in Matthew and Luke for a combination scene with the Adoration either of the Shepherds or of the Magi.

That the scenes of this Western type are rather Adorations than Nativities is consistent with the slight consideration which the early theologians gave to the actual birth and also with the highly symbolic character of Christian art in the West during the first four centuries. The relatively slight importance of the Nativity prior to 350 A. D. and the fact that it was seldom, if ever, separated in the Christian mind from some form of an Adoration is shown by the fact that it was celebrated in Rome on January 6 at the same time with the Adoration of the Magi and the Adoration of the Shepherds. Augustine and other of the Fathers, some of whom already recognized the twenty-fifth of December as the Natal Day, looked upon it not as a feast day and a sacrament, but simply as a day to be remembered.²² Therefore, considering the minor importance of the Nativity, the absence of the Nativity in the frescoes of the catacombs, save the late and manifestly symbolic scene in S. Sebastiano, and the fact that the scene depicted on all the sarcophagi has joined with it some form of an Adoration, it is to be supposed that these Western scenes typify either the Adoration of the Gentiles, who are symbolized by the Magi at the feet of Christ, or of the Jews, whom the shepherds represent, or the Adoration of the animal kingdom as denoted by the ox and ass.

Whether or not it is admitted that all the scenes were conceived with only the idea of extolling to the faithful the divine kingship of the Saviour

²⁰ Michel, *op. cit.*, p. 99.

²¹ Michel, *op. cit.*, p. 105.

²² Schmid, *op. cit.*, p. 53.

by revealing to them the universal worship and homage which was immediately accorded Him even at the moment of His birth, it is clear that the ox and the ass existed in art not as accessories of the manger but as a form of adoration. Although the two beasts were not mentioned in any of the Gospels before the fifth century, their symbolic presence at the Nativity had already been referred to by theologians. In the West, Prudentius,²³ St. Ambrose,²⁴ and Peter of Ravenna²⁵ speak of them as adoring their Master, and in the East the same significance is given them by Ephraem, Gregory of Nazianzus, and Gregory of Nyssa.²⁶ Hence in the fifth century when the Gospel of Pseudo-Matthew was being translated for Latin readers from its Eastern sources, the presence of the ox and the ass as symbols of adoration in the Nativity was a commonplace of Christian imagery.²⁷ Then, as so frequently happens, the established art influenced the literature of the period. Western Nativities regularly included the stable-shed, while Eastern tradition (see p. 22) insisted that the Child was born in a cave. Hence the Latin compiler of Pseudo-Matthew took pains to reconcile his Eastern sources with Western artistic usage by having Mary go forth from the cave and place the Child in the manger of a stable, where the "ox and the ass adored Him." This last interpolation, the only account we have of the Adoration of the Ox and Ass, is a similar enrichment of the narrative with a view to reconciling it with current images of the Nativity.

This description in Pseudo-Matthew of the Adoration of the Ox and the Ass, rather than of a Nativity, is in turn the most likely source for the

²³ Leclercq in Cabrol's *Dictionnaire d'archéologie chrétienne et de liturgie*, s. v. "Ane," col. 2049, cites the following hymn of Prudentius:

"Aeterne rex, cunabula,
Populisque per saeculum sacra,
Mutis et ipsis credita,
Adorat haec brutum pecus." (*Cathemerinon* XI, 78, P. L. LIX, col. 896.)

²⁴ Leclercq, *op. cit.*, col. 2053, cites the following passage from St. Ambrose wherein is brought out the symbolic meaning of the ox and the ass:

"Noli hoc aestimare quod cernis, sed quod redimeris agnosce. Quia in pannis est, vides, quia in caelis est non vides. Infantis audis vagitus, non audis bovis dominum agnoscentis mugitus. Agnovit enim bos possessorem suum, et asinus praesepe Domini sui." (In Lucam, II, 7, P. L. XV, col. 1648 sq.)

²⁵ Kehrer, *Die Heiligen drei Könige in Literatur und Kunst*, 1908, I, p. 21.

²⁶ Kehrer, *op. cit.*, I, p. 21.

²⁷ Leclercq, *op. cit.*, col. 2053, says: "Ainsi, dans le courant du iv^e siècle, on pouvait reconnaître encore, au moins quand on avait entendu saint Ambroise, que l'âne et le bœuf de la crèche n'étaient autre chose que des symboles."

Provençal type of the Nevers, Milan, Werden, and Bodleian ivories. This type is Western in that the event is represented under cover rather than in the open or in a cave as is the case with the Eastern scenes. Yet the type is different from any of those on the Western sarcophagi. It is a more definite attempt than any on the sarcophagi (on which we find only the most rudimentary kind of a shed covering the Child alone) to render a scene in a stable, for across the whole back of the composition, in the best examples (Milan, Nevers), extends a brick wall. Also, unlike the sarcophagi scenes in which either the shepherds or the Magi are usually figured and Joseph is absent, it omits the shepherds but represents both Joseph and Mary seated beside the crib where the beasts worship the Babe. As a translation into pictorial form of the account in the Latin Pseudo-Matthew these variations from the customary Western types are explained by the description which says that Mary, "entering a stable, placed the Child in the manger, and the ox and the ass adored Him. . . . And Joseph and Mary lived in this place with the Child for three days." We may have then, in this scene, that dependence on the Pseudo-Matthew text which is apparent in other scenes on the ivories of this group.

Two peculiarities of the use of the scene in Provence lie in the ultra-symbolical way in which it was conceived, and in a persistent tendency

FIG. 14. ARLES: ST. TROPHIME, SARCOPHAGUS. ADORATION OF THE MAGI AND ANIMALS.

to connect it with the Adoration of the Magi. On a sarcophagus cover of Provençal style at Milan,²⁸ which has already been cited in the first group, there is an undoubtedly symbolical representation of the Adoration of the Ox and the Ass (Fig. 7). On a sarcophagus of S. Trophime at Arles²⁹ (Fig. 14) there occurs an Epiphany scene in which Jesus, a child of

²⁸ See page 14.

²⁹ Le Blant, *Les sarcophages chrétiens de la ville d'Arles*, pl. XXVI; Garr., *op. cit.*, V, pl. 317/4. No. 19 (Table I), which omits the Shepherds and combines the adorations of the Magi and the Ox and Ass, is a Provençal sarcophagus (St. Maximin).

two years, sitting in His mother's lap, receives the gifts of the three Magi while at His feet lie the two animals looking up at Him with devotion. This last scene is a frank combination of the two Adorations in a symbolical sense, without any connection whatever with the Nativity. The same combination of the Adoration of the animals with that of the Magi was in the minds of the ivory carvers of this school of southern France, as is shown by the way in which they associate the two scenes. For example, the Adoration of the Ox and the Ass on one of the Milan book covers occupies the top panel, which is also the place assigned to the Adoration of the Magi on the other cover, in defiance of chronological sequence. The Werden and Nevers ivories combine the two scenes in one panel, and on the Bodleian book cover one occurs below the other.

EAST.

In the East the Oriental-Hellenistic, the Alexandrian-Coptic, the Palestinian-Coptic, and the Byzantine types stand out in clear distinction. They are all distinguished from the Western Adoration type by the absence of the shed. All the apocryphal gospels of the Orient, as the Prot-evangelium of James,⁸⁰ the History of Joseph,⁸¹ the History of the Blessed Virgin Mary,⁸² and the book of Pseudo-Matthew which was derived from Eastern sources,⁸³ agree in stating that Mary gave birth in a cave on the way to Bethlehem. These apocryphal gospels were the sources followed by the artists of the East. Their Nativities therefore are depicted either in a cave or, as is more often the case, in the open, because a scene in a cave was too difficult a problem for their limited artistic expression. There are, however, two very small groups of Eastern monuments which, save as they represent the scene in the open, do not conform to any of the Oriental types.

Group VII. *The Oriental-Hellenistic Group.*

This group is a continuation of the Adoration type on Eastern monuments. It differs, however, from the Hellenistic type in that the Western shed is omitted and the event is figured in the open. It appears on two encolpia, one in the Museum at Constantinople⁸⁴ (Fig. 15) and the other in the Museum of Reggio,⁸⁵ both ascribed to Palestine by Diehl,

⁸⁰ Michel, *op. cit.*, p. 39.

⁸¹ Michel, *op. cit.*, p. 201.

⁸³ See p. 189.

⁸⁴ Table I, no. 26.

⁸⁵ Table I, no. 25.

Dalton and Strzygowski. While on both of these encolpia the scene takes place in the open after the Eastern manner, the Virgin and Joseph are omitted, and on the Reggio encolpium there is figured only the Adoration

FIG. 15. CONSTANTINOPLE: IMP. OTTOMAN MUSEUM, ENCOLPIUM. NATIVITY AND FLIGHT INTO EGYPT.

of the animals with the Adoration of the Shepherds. Another gold encolpium, from Cyprus, was recently published by Strzygowski in *Oriens Christianus* (V, 1915, p. 96 sq.); it adds to the above scene the seated figure of Joseph and a saddled and bridled ass, reminiscent of the Journey to Bethlehem,—the Virgin is still absent (Table I, Errata, no. 27 a). These Eastern examples show that the Adoration type is "Western" only in that nearly all its examples occur on Western monuments. As in the case of so many other scenes, the Western type was simply a Hellenistic type common throughout the Mediterranean basin and surviving later chiefly in the West. It is then not in the least surprising to find it occasionally, with its special meaning of worship, on later monuments of the East as well. That it was prevalent earlier in the East is shown by its appearance in its simplest form on a marble relief found in Naxos (Table I, Err. no. 24 a) which cannot be later than the early fourth century.

Group VIII.

This group appears to depict a transitional type and is represented, so far as existing monuments go, only by the Syrian Gospels of Rabula.⁸⁶ Unlike the Eastern representations, Mary is seated, instead of lying on a mattress, while Joseph is placed behind the crib; in the background is the façade of a building (Fig. 16). In the scene are no adoring animals, shepherds, or Magi. That it may represent the Syrian type of the Nativity can not be assumed from such scanty evidence.

Group IX. *The Alexandrian-Coptic Type.*

As a type it is characterized by the introduction of the midwife Salome

⁸⁶ Table I, no. 28.

into what would otherwise be a general Oriental type. In this group the Christ Child, wrapped like a mummy, lies on a stone or brick crib where the ox and the ass adore Him; on one side of the foreground sits Joseph, on the other the Virgin reclines on a mattress, and either in front of the crib

FIG. 16. FLORENCE: LAURENTIANA,
GOSPELS OF RABULA. THE NATIVITY.

or before the Virgin kneels Salome extending her withered arm in supplication to Mary.

Three sets of proofs connect the Salome type of the Nativity with the Coptic art of Egypt. They are: the Coptic character of the style and ornament of most of the monuments on which the type occurs, the Coptic origin of Salome in apocryphal literature, and the moral and religious concepts of the Copts which required the introduction of the doubting Salome into the scene to prove the absolute spiritual nature of Christ.

The reason for calling this type the Alexandrian-Coptic is the fact that it first occurs on the chair of Maximianus³⁷ (Fig. 17) and then continues to appear on a number of unquestionable Coptic monuments which in other scenes as well are allied in iconography with the Maximianus chair. The chair is certainly Egyptian by its iconography; practically all its scenes are closely related to Coptic types. Its style, however, while affording some parallels with Coptic work, is so generally Hellenistic as to justify the attribution by Diehl and Leclercq to Alexandria; the extensive evidence

³⁷ Table I, no. 29.

in favor of their attribution is assembled in my article on the subject in the *American Journal of Archaeology* (1917, pp. 22-37). The close rela-

FIG. 17. ROME: STROGANOFF COLLECTION,
PANEL FROM CHAIR OF MAXIMIANUS. THE
NATIVITY.

tions of its scenes to Coptic types simply reflect the natural derivation of the art of Upper Egypt from ateliers of Alexandria. The Coptic monuments on which this type with the doubting Salome occurs are: a fragment of the Murano book covers in Manchester³⁸ (Fig. 45), an ivory fragment in the British Museum³⁹ (Fig. 18), a pyxis in Vienna⁴⁰ (Fig. 19), one in the Berlin Museum⁴¹ (Fig. 20), and one in Werden.⁴² In a fresco of Bawit,⁴³ dating from the sixth or seventh century, there is also a Nativity with Salome, as the inscription shows, which omits the Christ Child and Joseph, a point whose significance will be discussed later. In the eighth century on a Coptic ivory of Bologna⁴⁴ the scene appears as a transition to the

³⁸ Table I, no. 31.

Byzantine type representing Salome about to wash the child. In a curious eclectic rendering Salome occurs in the scene of the Nativity on one of the ciborium columns of San Marco.⁴⁵ Instead of lying on a mattress as she does in all the Coptic examples of the Nativity, the Virgin is here

FIG. 18. BRITISH MUSEUM: IVORY.
THE NATIVITY.

FIG. 19. VIENNA: K. K. MÜNZKABINETT, IVORY PYXIS.
THE NATIVITY.

seated as on the Western sarcophagi. The first reason, then, for connecting this type with Egypt is its appearance in the Bawit fresco and the fact that all the above mentioned ivories with the exception of the Maximianus chair are readily admitted as Coptic monuments from their style and ornament.⁴⁶

Second, with reference to the Coptic origin of the Salome motif,

FIG. 20. BERLIN: MUSEUM, IVORY PYXIS
FROM MINDEN. THE NATIVITY.

Reveillout⁴⁷ has found some Coptic apocryphal fragments belonging to the Gospel of the Twelve Apostles which prove that this detail originated in Egypt. In the Protevangelium of James and the Gospel of Pseudo-Matthew, which goes back to Oriental sources, Salome is only briefly mentioned in connection with the Nativity. On the other hand, in the Gospel of the Twelve Apostles her importance in Coptic eyes is brought out in the detailed account which is given of her whole life from the

⁴⁵ Table I, no. 37.

⁴⁶ Dalton, *Byzantine Art and Archaeology*, pp. 209-211; Strzygowski, *Hellenistische und Koptische Kunst*, pp. 85-88.

⁴⁷ Reveillout, *Journal Asiatique*, X^e sér. V. 1, 1905, "La sage-femme Salomé," p. 409 sq.

time when she first sold herself for money, through her participation in the Nativity, to her conversion by Simeon. In the Protevangelium, again, the midwife whom Joseph finds brings with her the doubting Salome; in the Pseudo-Matthew this midwife is called Zelemi. Inasmuch as Salome and the midwife in the Coptic Gospels are one and the same person, Reveillout⁴⁸ holds that Salome in the Protevangelium has no reason to be there save for the purpose of reconciling two diverse texts. One of these texts he supposes to be Coptic, in which Salome was the midwife, and the other a Syrian text in which the midwife was called Zelemi. Since the earliest manuscript of the Protevangelium dates only from the ninth century⁴⁹ and manifests a blending of the Gnostic (?) Apocryphum Josephi and the Apocryphum Zachariae,⁵⁰ it is quite possible that its text was interpolated to conciliate the divers Coptic and Syrian versions of the Nativity.

Furthermore, the Nativity in the fresco which Clédat⁵¹ unearthed in the ancient Coptic monastery of Apa Apollo at Bawit (Fig. 21) bears out the Coptic origin of Salome. The unusual character of this scene

FIG. 21. BAWIT: FRESCO. THE NATIVITY.

lies in the absence of Joseph and the Christ Child from the composition and the striking importance given to Salome, who stands before the Virgin as she reclines upon a mattress. Reveillout,⁵² commenting on the Bawit frescoes, shows that the whole series dealing with the early life of the Virgin represents an unique tradition drawn from the Coptic Gospel of the Twelve Apostles. When one considers the minute and detailed emphasis laid upon the story of Salome in the Coptic gospel in connection with the extraordinary significance given her in the Bawit Nativity, it seems clear

⁴⁸ Reveillout, *op. cit.*, p. 441.

⁴⁹ Michel, *op. cit.*, p. III.

⁵⁰ Michel, *op. cit.*, p. VIII.

⁵¹ Clédat, *Comptes Rendus*, 1904, p. 517.

⁵² Reveillout, *op. cit.*, p. 428.

that the doubting Salome is an addition to the scene which we owe to Egypt.

Lastly, the motif of Salome is perfectly consistent with the moral and religious ideals of the Copts. The Coptic mind required the presence of the doubting midwife in the scene by reason of its fundamentally carnal character.⁵³ The introduction of Salome in the Nativity simply expressed the doubt which until it was dispelled prevented the Copts from accepting the divinity of the Saviour. In other words, to the degree that they were themselves material, they naturally demanded that their divinity be wholly spiritual, partaking of no polluting material attributes. For this reason they were Monophysites, combating the orthodox view of the Trinity and upholding the purely spiritual nature of Christ. The doubting Salome afforded a very obvious, however vulgar, means of demonstrating the immaculate birth of the Saviour, especially important to them in their struggle against the orthodox view of Christ's double nature.

It is interesting to note that this incredulous midwife occurs spasmodically in Carolingian and Ottonian art. In the Sacramentarium of Drogo,⁵⁴ which was executed in the ninth century and bears some very close analogies to Oriental art and especially that of Alexandria, Salome is depicted leaning over the Virgin as she reclines on her mattress. In the same manner the midwife is shown on a tenth century ivory of German workmanship in the Spitzer collection⁵⁵ and on two other German ivories⁵⁶ of the tenth or eleventh centuries. This Coptic type also penetrated into Rome where we find the doubting Salome in the eighth century in a mosaic of the chapel of John VII⁵⁷ and in a fresco⁵⁸ in the cemetery of S. Valentino. With these few exceptions, the Coptic midwife rarely appears in the later art either of East or West.⁵⁹

⁵³ Gayet, *L'art Copte*, p. 33 sq. One has only to read the history of the Coptic Fathers from the account of the self-infliction of Origen, through the sensual temptations of St. Anthony, to the confessions of Schnoudi to realize, as Gayet says, that restraint, purity, and love did not exist in them.

⁵⁹ Dalton, *op. cit.*, p. 654, says, "The episode of the incredulous midwife Salome . . . has been commonly thought not to occur much before 800 A. D." He cites for this statement Schmid (*Die Darstellung der Geburt Christi*, p. 125) who really says that

Group X. *Palestinian-Coptic Type.*

This is the type which seems to have originated in Palestine and passed into Egypt.⁶⁰ It is characterized by the representation of the birth in the open where Mary, with Joseph seated beside her, lies in Eastern fashion on a mattress. The best examples of this type appear on a Monza phial⁶¹ (Fig. 22) and the covers of the Etschmiadzin Gospels.⁶² The first shows the type as it appeared in Palestine; the second is an Egyptian work, being

FIG. 22. MONZA: METAL AMPULLA, DETAIL.
THE NATIVITY.

a later product of the same school that produced the Maximianus chair, and showing in its iconography that imitation of Syro-Palestinian types which is so frequent in the Christian art of Egypt (p. 179). The type was probably derived from the mosaic of the Nativity which adorned the famous Church of the Nativity at Bethlehem.⁶³ There existed intimate relations between the minor arts and the great works of monumental style. The large historical compositions of the scenes of the New Testament in the great church of the Holy Land were very soon universally known through Christendom.⁶⁴ These illustrious prototypes were willingly imitated and no doubt constituted a tradition for a certain number of scenes.

Small mobile objects, as manuscripts, stuffs, ivories, censers,⁶⁵ and

Salome does not appear in Eastern or Western art after the year 800. This is untrue of the West, but so far as I have been able to trace it, the actual doubting Salome does not occur in the East after that date.

⁶⁵ Table, nos. 42-49.

especially the Palestinian ampullae of which those at Monza⁶⁶ are examples, may well have spread throughout the Mediterranean the iconographical types fixed by this monumental art. At any rate the Palestinian type of the Nativity passed into Egypt where it occurs on a Coptic painted panel (Fig 23) now in the Golenisheff Collection⁶⁷ at Petrograd and on a Coptic textile⁶⁸ in the Sancta Sanctorum at Rome. While a few later examples⁶⁹

FIG. 23. PETROGRAD: GOLENISHEFF COLLECTION, PANEL. THE NATIVITY.

exist of this type, for practical purposes of distinction we may say that the Palestinian-Coptic type fell into disuse at the end of the eighth century.

The Byzantine type is characterized at the outset by the presence of two midwives as a customary part of the composition.⁷⁰ By the beginning of the ninth century Byzantine art had commenced to formulate its iconography along lines of supposedly historical fact. Seeking as it did to give some precise and comprehensive details to the rather pale events of the life of Christ as they were related in the canonical Gospels, the artists more and more depended upon the apocryphal books

⁶⁶ Diehl, *op. cit.*, p. 301.

⁶⁷ Table, no. 40.

⁶⁸ Table, no. 41.

⁶⁹ Table, nos. 51, 52, 53.

⁷⁰ This apocryphal corruption in the East of the canonical account, which in Luke specifically stated that Mary herself enveloped the Child, aroused a great controversy during the earlier centuries when Eastern ideas were being taken up in the West. Pope Gelasius rejected all apocryphal writing which gave any place to the testimony of the two midwives and proved so inconvenient for the theologians to justify. The popular demand was too strong for the Church and by the eighth century there was introduced into the West as well as in the East the two midwives washing the young Saviour. The Church, when it realized that Zelemi and Salome were in the scene to stay, explained

and especially upon the Protevangelium of James. While in the literature of the East, outside the apocryphal gospels, the two midwives are first mentioned only in the tenth century by Simeon Metaphrastes,⁷¹ from the eighth century on there are very few cases either in Byzantine or Italo-Byzantine art in which the two women do not appear in the Nativity as assistants washing the Child.⁷² It is to be noted, however, that an abbreviated Byzantine type is found in the eighth or ninth century.

Group XI. *A Byzantine Sub-type.*

While the Byzantine type is generally to be characterized by the presence of the two midwives, this small group represents a rare sub-type⁷³ where the midwives are omitted and the new feature of angels hovering over the crib is introduced (Fig. 24).

Group XII. *Byzantine Type.*

The actual Byzantine type is represented by this group, which, besides the distinctive feature of the midwives, also shows the adoring angels

FIG. 24. BERLIN: KUPFERSTICHKABINETT,
GREEK LECTIONARY. THE NATIVITY.

who manifestly represent the Adoration of the Heavenly Hosts for the Son of God. While this type does not begin to appear universally on Byzantine monuments until the ninth century, its inception may go back to earlier proto-Byzantine or Syrian models. The description⁷⁴ of the lost mosaics

their presence on the ground that they existed as witnesses of the event and the function which they performed originally referred to the sanctification by water which God decreed that His Son should undergo that man might see the sacramental necessity of baptism.

⁷¹ Heisenberg, *op. cit.*, II, p. 226.

⁷² Table I, Group 12.

⁷³ Table, nos. 54, 55, 56.

⁷⁴ Heisenberg, *op. cit.*, II, p. 223. The Church of the Holy Apostles was built and decorated by Justinian (*op. cit.*, page 2), and by the end of the ninth century had lost all its old beauty and was in ruins. Under the Emperor Basil I (867-886) it was re-

of the Church of the Holy Apostles at Constantinople says that the event was pictured in a cave, that the Virgin was depicted reclining on a mattress, that at least one midwife was represented "washing the Child," and that the Adorations of the beasts, the shepherds, and the angels were included in the scene. To this description Heisenberg, who attempts to restore the mosaics and date them in the sixth century, would add the figure of Joseph and another midwife. But these mosaics are now dated by the majority of scholars in the ninth century. With few exceptions

FIG. 25. PARIS: BIBL. NAT., MS. GR. 74.
THE NATIVITY.

from the eighth century on in the East the Adoration of the angels is combined with the Adoration of the animals,⁷⁵ with the Adoration of (or in some cases more properly the Annunciation to) the Shepherds,⁷⁶ and often with the Adoration of the Magi.⁷⁷ Mary on all the examples of this group reclines on a mattress, and the Nativity itself, though for a time figured as having taken place in the open,⁷⁸ soon came to be depicted in a cave. A fair sample of the Byzantine type, exceptional nevertheless in omitting the angels, is afforded by Figure 25.

decorated. Of the edifice thus restored and of the mosaics which adorned its walls there exist two descriptions: one, the poem of Constantine the Rhodian of the tenth century; the other, more complete, is the work of Nicholas Mesarites, which was composed between 1199 and 1203 (*op. cit.*, p. 8) before the church was finally destroyed to make place for the mosque of Mahomet II. Although the mosaics in this church are usually attributed to the ninth century (Dalton, *Byzantine Art and Archaeology*, p. 392; Diehl, *Manuel*, p. 448-451; Millet, *L'art byzantin*, in Michel, *Histoire de l'art chrétien*, I, p. 190), Heisenberg assigns them to the sixth century largely on the ground of their similarity to the miniatures of the proto-Byzantine Gospels of Rossano (Heisenberg, *op. cit.*, pp. 140-170). Whether of the sixth or ninth century, although the latter date is by far the more convincing, the scenes in the mosaics of this famous church would have been influential in the final establishment of Byzantine iconography which did not become traditional until the ninth century.

The Appearance of the Star to the Three Magi was primarily Syrian in conception and origin. The event, as a separate scene in early Christian art, occurs only on the monuments of communities which were closely connected with Syria. The largest number of examples come from Provence, which in many ways, as will be shown in a subsequent chapter (see p. 192 *sq.*), was a Syrian colony closely connected with the Syrian church.

Although the star appears to the Magi on the sarcophagi of Rome it is always in the representations of the actual Adoration and never as a separate scene. As a distinct scene, usually combined with another and separate scene of the Nativity or Adoration, it is rare, and as far as my knowledge goes is limited, in early Mediaeval art, to the examples cited above. While its importance in the Adoration was recognized in the West, it had no liturgical significance and does not appear to have received the symbolical interpretation that it had in the East. Prudentius simply de-

¹² Kehrer, *op. cit.*, fig. 24.

¹⁴ Kehrer, *op. cit.*, fig. 26.

scribes the star and says that it effaced all others and shone so bright that Lucifer himself dare not struggle against it.¹⁵ It was in Syria that the importance of this heavenly guide was symbolically developed and introduced into the liturgy of the church. The star was the text of exegesis and sermons and in the Syrian church on the night of January 6, besides the Birth of the Saviour and His Adoration by the Shepherds, the Appearance of the Star was also celebrated.¹⁶ Basilius, Bishop of Caesarea in Cappadocia, has left a sermon on its appearance¹⁷ and St. Ephraem gave the first full interpretation of this "Herald on high, a Herald of Divinity."¹⁸ Moreover, he mentions an angel in connection with the star, and while there remain no early monuments from Syria where the Appearance of the Star is figured as a separate scene, on one of the Palestinian phials¹⁹ at Monza an angel points out to the Magi a large star which hangs over the head of the Virgin.

The rendering in Provence is distinctive. On two sarcophagi of Arles (Fig. 26) the Magi, dressed in Phrygian caps, short chitons, chlamydes,

FIG. 26. ARLES: SARCOPHAGUS. THE MAGI
GAZING AT THE STAR.

and anaxyrides, are represented gazing with gestures of surprise at a brilliant star above their heads. The characteristic feature is the odd notched chiton which they wear. The scene on the Milan sarcophagus in the church of San Celso, while similar in motif, is entirely different in composition and in this particular detail of the Magi's costume. The three Magi, all in a line, are looking, not over their heads at the star as

¹⁹ Garr., *op. cit.*, VI, pl. 433/9.

on the Provençal sarcophagi, but toward the right; their chitons instead of being notched around the bottom, so that they appear to hang in three triangular pieces as on the Gallic monuments, are cut with a straight edge and girded about the waist. This feature of the notched chiton was common, if not peculiar, to the costume of Orientals on the monuments of Provence. On a sarcophagus of Saint-Gilles²⁰ in the scene of the three Hebrews before the bust of Nebuchadnezzar the young men, instead of looking at the bust, are concerned with a star above their heads; they use the same gestures and attitudes as the Magi on the Arles sarcophagi and they also wear the notched chitons.

The scene on the Milan book covers (Fig. 27) and on the Werden casket (Fig. 28), which is always to be associated with the covers, is

FIG. 27. MILAN: CATHEDRAL, IVORY BOOK COVERS. THE MAGI GAZING AT THE STAR.

nearly identical, even to the gestures and notched chitons of the Magi, with the representations of the sarcophagi of Provence. The similarity in fact is so marked as undoubtedly to connect the ivories with southern Gaul. While the intimate religious bond between Provence and Syria relates the scene on the sarcophagi and ivories to the Syrian feast on January 6, the text of Pseudo-Matthew,²¹ which we have seen influencing the rendering of other scenes on the Milan and Werden ivories, offers a source for the actual representation. In the apocryphal account we read that "when the Magi were going on their way, there appeared

²⁰ Le Blant, *Les sarcophages chrétiens de la Gaule*, pl. XXXVI/2.

²¹ Michel, *Évangiles apocryphes*, Paris, 1911, p. 111.

to them the star, which was, as it were, a guide to them, going before them until it came to where the Child was. And when the Magi saw the star, they rejoiced with great joy."

The only other example of the scene in the early Christian period is on the ambo of Salonica whose artistic connections with Syria have been

FIG. 28. S. KENSINGTON: VICTORIA AND ALBERT MUSEUM, IVORY CASKET. THE MAGI GAZING AT THE STAR.

pointed out by Bayet²² and are shown by my own classification of the Adoration of the Magi.²³ The presence of this scene on the ambo, while its composition is quite distinct from that of the Provençal sarcophagi and ivories, confirms the Syrian inspiration of the work. In the eighth century the scene occurs on an ivory from Egypt at Bologna in a form resembling the Provençal type. The same scene appears after the ninth century in several Ottonian manuscripts (see Fig. 47) and in Italy among the frescoes of S. Urbano alla Caffarella and in panels of the bronze doors of the cathedrals at Pisa and Monreale.

VI

THE ADORATION OF THE MAGI

The Epiphany is as complicated in art as it is involved in liturgy. With few exceptions the distinctive feature which separates the scenes of the West from those of the East during the first eight centuries of Christian art is the aspect of the Magi, who are beardless on the monuments of the West and on those of the East are either all bearded or are differenti-

²² Duchesne and Bayet, *op. cit.*, p. 249 sq.

²³ See *Adoration of the Magi*, p. 55.

ated in age by the first Magus having a heavy beard, the second Magus having a light beard, and the last being beardless. Also the frontal Madonna in the scene is an Oriental characteristic never seen on the monuments of the West save as it was introduced directly from the East. The main types¹ of the Adoration in art are the Hellenistic, the Hellenistic-Oriental, the Alexandrian-Coptic, the Palestinian-Coptic, and the Byzantine. Before discussing the classification of the scenes of the Adoration of the Magi, it is necessary to mention the highly symbolic composition in the fourth century arch mosaics of Santa Maria Maggiore,² which defies all classification. It is called by Richter "The Coming of the Orient to Christ" (Fig. 29).

FIG. 29. ROME: S. MARIA MAGGIORE, MOSAIC. ADORATION OF THE MAGI.

Christ is figured as a youth dressed in a long white tunic with purple clavi and seated on a large, jewelled, quadrangular throne with a gemmed suppedaneum. The miraculous star is poised above His head and four angels stand behind His throne. To the right of the central group is a small throne on which is seated a woman enveloped in sombre purple, who has been variously interpreted as a Sibyl, an attendant, and as the personification of Ecclesia ex Circumcisione. The seated Byzantine figure at the left, apparently a Madonna, is an interpolation of the eighteenth century.³

³ Richter and Taylor, *op. cit.*, p. 331.

In all probability one of the Magi has been destroyed for now only two Magi to the right of the throne advance with gifts.

WEST. THE HELLENISTIC TYPE.

The general characteristics of the Hellenistic type are: the *beardless* Magi advancing in a line, the young Jesus of two years sitting in His mother's lap, the Virgin at first represented sitting in a three-quarters attitude and later in profile, and the absence of Joseph or any figures to give the scene the appearance of an actual event. This Hellenistic type may be subdivided as it presents different variations into several groups: an early group where the Virgin sits in a Hellenistic three-quarters attitude, a rare "Epiphany type" where the Magi worship the young Jesus in His manger, a later group where the Virgin is represented in profile, and the Provençal type where the Magi usually wear the peculiar notched chiton referred to in the discussion of the preceding scene.

The reasons for calling this type Hellenistic are: the early appearance of the scene in Christian art, the Hellenistic character of the Virgin's attitude, and the derivation of the Magi from the representations of the Mithraic cult so numerous in late Hellenistic art throughout the Mediterranean world. In the first place this type began as early as the second century when Christian art had only Hellenistic models to which to turn. Second, the easy posture of the Virgin, who on all the monuments of the first group sits in a three-quarters pose, belongs rather to the art of the catacombs than to that of the sarcophagi. The relation of the Christian Magi in the scene of the Adoration to the Hellenistic representations of Oriental priests has been shown by a first century relief from the Villa Borghese published by Biénkowsky.⁴ The costumes of the two priests on this relief, including the Phrygian caps, the short chitons, the chlamydes and the anaxyrides, are identical with the garments which are worn by the Magi on the sarcophagi; furthermore, the priests bear gifts to a goddess, the one at the right extending a large wreath on veiled hands while the other priest at the right presents a vase in the same manner. This form of presenting gifts on veiled hands is usually followed on the sarcophagi and even the wreath and the vase are frequently figured among the gifts.

⁴ See Von Sybel, *Röm. Mitt.*, 1912, p. 311 sq., fig. 1.

Besides this first century prototype for the Magi and their gifts, another instance of the influence of classical art upon the Christian scene is afforded by a sarcophagus relief at Rome from the Villa Doria Panfili.⁵ Here in a scene of the Adoration the Virgin with the young Jesus on her knees lies in classical fashion on a couch. Although unique among the representations of the Adoration, this example shows the tendency of the artists even of the fourth century to turn to Hellenistic models.

Another Hellenistic feature of this type is its general symbolic character. The absence of Joseph or any other figures to mark the scene as an actual event emphasizes the symbolism which depicts the Magi as the first converts from paganism.⁶ During the first five centuries Christian art, besides being Hellenistic in character, was not primarily narrative, but symbolic. To sum up, the Hellenistic character of this first type is shown by its dependence on Hellenistic models, its symbolic rather than narrative conception, and its early inception when Christian art was purely classic in its forms.

This Hellenistic type was not peculiar to Rome and the West but was generally known throughout the Mediterranean basin. While all the Western examples of the Adoration prior to the eighth century belong to this type, all the examples of the Hellenistic type are not Occidental. As far as its Oriental and Hellenistic prototypes go, it might well have originated in any one of the large cities of the East or even in Rome itself; but it is more likely that the type came from Alexandria, the great centre of Hellenistic art and the most important centre of Hellenistic Christianity.

The fact that the Feast of the Epiphany first originated in Alexandria sustains the probable Alexandrian origin of the Hellenistic type. In Alexandria, early in the second century, the Feast of the Epiphany was celebrated on the eleventh of Tybi or the sixth of January in the Gregorian calendar;⁷ from that centre it spread in the East over Syria, Asia Minor, north to Constantinople and in the West to Gaul and Spain.⁸

The first patristic reference to the triple gift of gold, myrrh, and frankincense comes in the second century from Origen⁹ of Alexandria. St. Irenaeus,¹⁰ bishop of Lyon from 170, developed the complicated

⁵ Table II, no. 2.

⁷ Kehrer, *op. cit.*, I, p. 24.

⁸ Kehrer, *op. cit.*, I, 24, 25.

⁹ Kehrer, *op. cit.*, I, p. 13, note 7.

¹⁰ Kehrer, *op. cit.*, I, p. 12.

theological significance in these gifts. In the gold, incense, and myrrh Irenaeus saw the symbols of Christ as King, God, and mortal. While Clement¹¹ of Alexandria propounded that the gold itself was the incorruptible Logos, proof against the corruption of rust, the symbolism of Irenaeus was widely accepted and in the West was restated by Sedulius¹² and Prudentius.¹³ And yet, while the Gospel of Matthew and practically all the theologians of both the East and the West state that the triple gift of the Magi was gold, myrrh, and incense, the gifts in the scenes of the Adoration on the Western sarcophagi show a wide range of objects.¹⁴ In fourteen sarcophagus representations the first Magus carries a wreath resting on a cloth.¹⁵ A Hellenistic prototype of this wreath has already been seen in the wreath offered by the priest on the first century relief from the Villa Borghese. Some such image seems to have been in the mind of Clement of Alexandria,¹⁶ who, in developing his symbolism of the Logos, frequently refers to the "golden wreath" which the Magi presented to the Christ Child. It is significant that the literary parallel for this persistent and peculiar detail of the Hellenistic Epiphanies is found in a Christian writer of Alexandria.

Group I. *The Virgin seated in a three-quarters posture.*

This group¹⁷ includes both catacomb and sarcophagus representations and the consistent characteristics are the beardless Magi, the Virgin seated in a three-quarters attitude, and the Child of two years in His mother's lap. While on a majority of the examples the Magi are three in number and advance with their gifts in a line, among the catacomb representations there are three scenes where the number of Magi is only two, one scene where they are four, and two examples where they do not advance in a line but are arranged symmetrically. It is to be noted, however, that in the second century fresco of the Greek Chapel¹⁸ the scene commences in the form which later becomes universal. This form is illustrated by

¹¹ Kehrér, *op. cit.*, I, p. 13.

¹² Kehrér, *op. cit.*, pp. 33-34.

¹³ Wilpert, *op. cit.*, p. 176; Prudentius, *Cathemerinon*, XII, 19 in Migne, *P.L.*, LIX, 905.

¹⁴ Many of the gifts of the Magi can not be recognized and may well be taken to represent any one of the triple gifts, which have no marked distinguishing features. In most cases the gifts represented appear to have been a matter of choice with the artists. On three sarcophagi (Table II, nos. 15, 20, 29) one of the Magi carries a dish containing two doves which suggests that the idea of purification was implied.

¹⁵ Table II, nos. 19, 20, 21, 24-30, 33, 37, 42, 43.

the early fourth century fresco in the cemetery of Callixtus shown in Fig. 30. In the two frescoes in the catacomb of SS. Pietro e Marcellino¹⁹ where there are only two Magi, the number was reduced, as Wilpert²⁰ says, be-

FIG. 30. ROME: CATACOMB OF CALLIXTUS. ADORATION OF THE MAGI.

FIG. 31. ROME: CATACOMB OF SS. PIETRO E MARCELLINO. ADORATION OF THE MAGI.

cause of the lack of space and from the desire to balance the panel with a scene on the other side of the cubiculum. In the case of the fresco (Fig. 31) in SS. Pietro e Marcellino,²¹ where the two Magi are arranged one on either side of the Virgin, and in Domitilla,²² where the four Magi are placed two on either side of the Mother and Child, the reason was a frank desire to obtain symmetry. Moreover, during the earlier centuries there was no absolute obligation to represent the number of Magi as three. While the Christian Fathers agreed in stating that the Magi brought a triple offering and it was assumed that each Magus brought one gift, it was not until the sixth century that the three Magi were named in the Syrian "*Spelunca Thesaurorum*."²³ Therefore, it is not surprising to find in Rome during the third century and the early part of the fourth century some freedom, caused by the exigencies of space and the desire for symmetry, in the number of the Magi represented.

Group II. *The "Epiphany Type"*²⁴ (Fig. 32).

This group, which is composed of six sarcophagus representations of the Adoration, is characterized by the beardless Magi advancing in a line with their gifts to the young Jesus who lies in His crib under a manger

¹⁹ Table II, nos. 5, 6.

²⁰ Wilpert, *op. cit.*, p. 179.

²¹ Table II, no. 4.

²² Table II, no. 7.

²³ Kehr, *op. cit.*, I, p. 65; Bezold, *Spelunca Thesaurorum*, Leipzig, 1883, p. 57.

²⁴ Kehr, *op. cit.*, II, p. 21 sq.; while isolating this "Epiphany type" Kehr also attempts to establish another combination type which he calls the "Christmas type." This last, as he describes it, shows the Adoration of the Magi combined with a contiguous scene of the Nativity which would, therefore, date the monuments on which it occurs after 354, for after that date the Nativity, formerly celebrated by the Roman

roof.²⁵ Kehrer's reason for calling this group the "Epiphany type" is that it depicts the Adoration as happening at the time of the Birth and because at the feast of the Epiphany on January 6 the Adoration and the Nativity were celebrated together. The date of this group, however, would be anterior to the middle of the fourth century or not much later, for the well known Calendar of 354 gives the Nativity as a separate feast

FIG. 32. ANCONA: SARCOPHAGUS. ADO-
RATION OF THE MAGI.

FIG. 33. ROME: SARCOPHAGUS. ADO-
RATION OF THE MAGI.

on December 25, showing that by that time the two festivals had ceased to be synchronous in Roman usage. It is also to be noted that on this early group of sarcophagi the Virgin sits in a three-quarters attitude.

Group III. *The Virgin in profile.*²⁶

This group, which is largely composed of representations on sarcophagi of Rome (Fig. 33), offers no features differing from the scene on the sarcophagi of the first group save the fact that the Virgin is no longer represented in the Hellenistic three-quarters posture but in profile. Theoretically the monuments of this group should be later than those of the first group, reflecting as they do the later tendency toward a frontal or a profile rendering of the figure.

Group IV. *Odd examples of the Hellenistic Type in the West which are connected with Eastern art centres.*²⁷

That the Hellenistic type was not peculiar to the West, but was used throughout the Mediterranean basin, is shown by at least two examples of this group. A fifth century panel of the carved wooden doors of Santa

church along with Epiphany on Jan. 6, was made a separate feast on December 25. While I have kept the Epiphany type in my classification, I have not isolated the "Christmas" type because on the three sarcophagi (Table II, nos. 25, 26, 31), on which Kehrer says that it appears, the scene that he calls a Nativity I have shown to be an Adoration of the Shepherds (see *Nativity*, p. 14) and not an actual representation of the Birth.

²⁵ Table II, Group 2.

²⁶ Table II, Group 3.

²⁷ Table II, Group 4.

Sabina²⁸ at Rome, the style of which is undoubtedly that of some one of the great Hellenistic centres in the East, represents (Fig. 34) the three Magi, beardless, advancing in a line toward the Virgin, who is seated in a three-quarters position on a high podium, holding the two year old Child in her

FIG. 34. ROME: S. SABINA, PANEL OF DOORS.
ADORATION OF THE MAGI.

lap. On the sarcophagus²⁹ of the Armenian Exarch Isaac (d. 643 A. D.), formerly in S. Vitale and now in the Royal Museum at Ravenna, occurs this same Hellenistic type. This sarcophagus, as is shown in the discussion of the scene of the Raising of Lazarus which occurs on it,³⁰ may be connected with the East through an Oriental relief recently found in Phrygia. The two amulets in the Vatican which are as late as the sixth century, as the use of the nimbi on the Virgin and Child would show, can not be located, although their style is that of the amulets coming from Palestine and Egypt.³¹

Group V-A. *Provençal Type.*

The main feature of the Adoration on the ivories assigned to Provence is the curious notched chiton (already noticed as a Provençal characteristic in the Appearance of the Star³²) which the Magi wear. The same chitons are used in the Adoration on a Provençal sarcophagus at Saint-Gilles.³³ On the Milan book covers³⁴ (Fig. 35), in addition to such details as the beardless Magi advancing in a line toward the young Child of two years seated in His mother's lap, the scene is represented in a house which appears as a brick wall extending across the back of the composition. It

²⁸ Table II, no. 38.

³¹ Table II, nos. 39, 40.

³² See p. 34. Comparison of Fig. 34 with Fig. 26 will show how the "notched" chiton worn by the Magi on the doors of S. Sabina differs from the Provençal garment.

³³ Table II, no. 43.

³⁴ Table II, no. 46.

is not only the representation of the scene in a house but also the manner of representing it that connects the scene on the other ivories of the group with the rendering on the Milan covers. The scene on the Werden casket (Fig. 36) is similar to the Adoration of the Milan ivory³⁵ in that the Virgin, heavily veiled, is seated in a three-quarters position on a cathedra; in her lap is seated the young Jesus clothed in a long tunic; and from left to right the three Magi, beardless and wearing the odd notched chiton, ad-

FIG. 35. MILAN: CATHEDRAL, IVORY BOOK COVERS. ADORATION OF THE MAGI.

FIG. 36. S. KENSINGTON: VICTORIA AND ALBERT MUSEUM, IVORY CASKET. ADORATION OF THE MAGI.

vance in a line with their gifts. The representation on the Nevers fragment (Fig. 164) is almost identical with that on the Milan ivory, even to the brick structure in the background.³⁶

Group V-B. *Continuation of the Hellenistic Types into Carolingian Art.*

The Provençal rendering, where the Magi, all beardless and wearing notched chitons, advance in a line with their gifts for the Christ Child of two years, who sits in His mother's lap, was transmitted about 800 directly into Carolingian art. It appears, even with the brick building in the background which characterizes the representation on the Milan and Nevers ivories, in the Bodleian book cover at Oxford³⁷ (see Fig. 169.) In the same century the type occurs not only in the Sacramentarium of Drogo³⁸ (Fig. 37), and a silver casket in the Sancta Sanctorum,³⁹ but also on four ivories.⁴⁰ The main difference in these scenes from that on the Bodleian book cover is the introduction of the plain nimbus for the Virgin and the cruciform nimbus for the Saviour. The Adoration on a Lombard relief in the Berlin Museum (Fig. 38), where the Hellenistic feature

³⁵ Table II, no. 47. See also p. 226, note 14.

³⁹ Table II, no. 53.

of the beardless Magi is preserved, differs from the other examples of the group in that the Child lies in His crib, and Joseph is figured in the composition. This Lombard scene is, therefore, more directly a continua-

FIG. 37. PARIS: BIBL. NAT., SACRAMENTARY OF DROGO. THE MAGI.

tion of the so-called Epiphany type, seen in Group II and illustrated in Fig. 32.

THE HELLENISTIC TYPE AND PSEUDO-MATTHEW

The possible texts which would in any way influence or confirm the use of this Hellenistic type are rare. Apparently, as an artistic type, it

FIG. 38. BERLIN: MUSEUM, LOMBARD RELIEF. ADORATION OF THE MAGI.

grew up in direct contradiction of an early tradition that the Birth and the Adoration were synchronous. On all the monuments of the Hellenistic type, save for the small Epiphany group, the young Jesus is represented as a child of two years. The fact that in Rome prior to the middle of the fourth century the Nativity was celebrated as a part of the Adoration and that all the Eastern writers speak of the Magi finding the Child in a cavern would show that the more prevalent tradition among the

theologians was that Jesus was just born when the Magi came to worship Him.⁴¹

Nevertheless, there must have existed also the tradition that the Adoration took place two years after the Birth, for the symbolic character of the Hellenistic type does not explain the Child sitting in His mother's lap. The Gospel of Matthew (ii, 11), which is the only canonical book that relates the Adoration, vaguely suggests, in saying that Herod killed all the babes of two years and that when the Magi "were come into the house, they saw the young Child with Mary His mother," that Jesus was two years old when the Wise Men came to offer Him their gifts.

The translator of Pseudo-Matthew, however, when he was turning his apocryphal sources into Latin evidently sought to reconcile his text with the prevalent custom of representing Jesus as a child of two. We read,⁴² "Two years having passed, some Magi came from the Orient to Jerusalem," and, "entering into the house, they found the Child Jesus resting on His mother's breast." At the time when the book was translated the West had separated the Birth from the Adoration by establishing the new feast on December 25, and the Hellenistic type had become the regular Western type. Thus, as in the case of the Adoration of the Ox and the Ass, the Pseudo-Matthew, when it was translated, was brought into accord with an iconographic tradition already established in the West.

EAST.

The main distinction between the Adoration scenes of the East and those of the West is, as said before, the aspect of the Magi. The Magi in the West are beardless, while on the Eastern monuments they are either all bearded or, as is more often the case, are differentiated in age and importance, the first Magus being heavily bearded, the second lightly bearded, and the last beardless. This attempt to give individuality and separate distinction to each of the Wise Men was characteristic of the Oriental attitude toward all the events of the life of Christ. The whole

⁴¹ Justin Martyr tells of the Magi finding the Child in a cavern (Kehrer, *op. cit.*, I, p. 12); John Chrysostom dwells on the humility which permitted the Son of God to be exposed to the gaze of shepherds and Magi in a cavern (Kehrer, p. 17); the Syrian Balaëus (p. 17) repeats the tradition, which is carried on by Petrus Chrysologus (p. 81), and is restated in the *Spelunca Thesaurorum* and in the Ethiopic *Vita Adami* (Kehrer, p. 18).

⁴² Michel, *op. cit.*, p. 109.

tendency of Christian art from the fifth century on in the East was to make the impersonal, symbolical art of the earlier centuries more historical and narrative in character. It is for this reason that we may call the differentiation of the Magi an Oriental feature.

That the Eastern types, with the exception of the Byzantine, disregard the account in the Protevangelium of James and of the Eastern theologians which says that the Magi came to worship on the night of the Nativity, and depict Jesus as a child of two in His mother's arms, indicates that they are derivations and indigenous adaptations of the Hellenistic type.

The types of the Adoration of the Magi which stand out on the monuments of the East are the Oriental Hellenistic type, the Alexandrian-Coptic type, the Palestinian-Coptic type, and the Byzantine type. As characterized by their most distinguishing features: the Oriental Hellenistic type is the same as the regular Hellenistic type save that the Magi are differentiated in age; the Alexandrian-Coptic is characterized by the Virgin in a three-quarters position and the introduction of an angel who points out the Child to the Magi, who are again differentiated; the Palestinian-Coptic is the same as the Alexandrian save that the Virgin is always represented in strict frontality; and of the Byzantine types, one is a continuation of the Alexandrian-Coptic, while the second is an original rendering derived from the liturgy. This differs from all the others in showing the Child new born *in His crib*, and in uniting with the Adoration of the Wise Men the Adoration of the Shepherds and the Angels.

Group VI-A. *The Oriental Hellenistic Type.*

This is the direct continuation in the East of the Hellenistic type; neither the angel nor Joseph occurs in the composition and the three Magi advance in a line to present their gifts to the young Jesus of two years in the lap of the Virgin, who sits either in profile or in a three-quarters pose. The only difference is the Eastern characteristic of the bearded Magi. The type appears on the encolpium in the Ottoman Museum at Constantinople⁴³ (Fig. 39), in very similar form on the Strzygowski encolpium mentioned before⁴⁴ (p. 23), an ivory pyxis at Florence,⁴⁵ a sarcophagus⁴⁶ at Ravenna, and an ivory at Rouen.⁴⁷

⁴³ Table II, no. 56.

⁴⁴ Table II, no. 57, and Errata.

⁴⁵ Table II, no. 58.

⁴⁶ Table II, no. 60.

⁴⁷ Table II, no. 59.

Group VI-B. *The Oriental-Hellenistic Type in the West.*

This group represents the continuation of the Oriental-Hellenistic type in the West. With the exception of the eighth century Lombard relief⁴⁸ at Zara, where the first two Magi are bearded and the last is beardless,

FIG. 39. CONSTANTINOPLE: IMP. OTTOMAN MUSEUM, ENCOLPIUM. ADORATION OF THE MAGI (SEE FIG. 15).

all the examples listed are Carolingian and Ottonian ivories⁴⁹ and show all three Magi bearded. The introduction of this type into the Western art of the ninth and tenth centuries may very likely have come either through Ravenna or from the numerous small objects which were brought back to the West by pilgrims from Palestine.

Group VII-A. *The Alexandrian-Coptic Type.*

The chief characteristic which differentiates this type from the Hellenistic type is the introduction of the angel who, standing between the Virgin and the first Magus, points out the Child to the advancing Wise Men. The Virgin on all the examples of this type sits in a three-quarters position, or at least her head is turned in that pose which was characteristic of the Hellenistic portraits of Alexandria. The Magi are represented advancing in a line and on the early Alexandrian examples are always differentiated one from another by their beards while on the later Coptic examples they are sometimes beardless.

The reason for calling the type Alexandrian-Coptic is its appearance on the Maximianus chair, whose Alexandrian origin has already been pointed out (p. 24), and on several later monuments of unquestionably Coptic origin.

The first example of the type is a fourth century relief,⁵⁰ found in Carthage. Although the relief is badly mutilated, it still shows great beauty of workmanship. The Virgin and Child sit in a most natural and

⁴⁸ Table II, no. 62.

⁴⁹ Table II, nos. 63-66.

⁵⁰ Table II, no. 67.

easy three-quarters position and before the fine classic seat on which the Virgin sits stands a winged angel pointing out to the three Magi (who unluckily are badly damaged) the young Jesus seated in His mother's lap. Behind the Mother and Child are traces of two male figures in whom Delattre recognizes the two prophets⁵¹ who foretold that a virgin would bring forth a child to the world. If Delattre is right, this introduction of the prophets reminds one of Alexandrian exegetics which persistently sought for parallels to the New Testament in the characters and incidents of the Old. The fine execution, the classical poise and draperies of the figures, and the bold, high relief show that the monument must have been the product of the best Hellenistic workmanship in the fourth century.⁵²

To this same century belongs a relief with the Adoration of the Magi at Kahrié Djami⁵³ at Constantinople which displays essentially the same Hellenistic workmanship and the same composition save for the fact that the two prophets are omitted and the figure of Joseph introduced in their place.

After these fourth century examples, the type occurs first on the Maximianus chair.⁵⁴ The panel with the three Magi is lost but on the part that remains the Virgin appears in the same three-quarters position, the angel, standing between the Madonna and the first Magus, points out the Child to the Magi, and behind the Virgin's cathedra is Joseph (Fig. 40). On the ivory book covers of the Etschmiadzin Gospels⁵⁵ the composition is strikingly similar to that on the Maximianus chair. The high backed armchair of wicker in which the Virgin is seated is identical with her seat on the Maximianus chair; on both ivories the winged angel stands in the same position between the first Magus and the Madonna, and Joseph appears on both monuments. According to the description of Trombelli⁵⁶ the Magi who are now gone from the ivory chair were prostrate on their knees. The tunics and anaxyrides of the Magi on the Etschmiadzin cover are identical with the costumes worn by the Egyptians in the Joseph

⁵¹ Delattre, *Musées de l'Algérie*, III, p. 1.

⁵² Strzygowski, *Denkschriften der Kaiserlichen Akademie der Wissenschaften*, (*Philos.-Hist. Klasse*), Vienna, 1906, p. 125, 141, describes a fragmentary Adoration in the Alexandrian "World-Chronicle" (c. 400), of which only traces of the Virgin and Child remain.

scenes⁵⁷ of the Maximianus chair, with the costumes of the gift bearing Orientals on the Barberini⁵⁸ diptych of Alexandria, and also with those worn by a figure on the Coptic pyxis of St. Menas⁵⁹ in the British Museum.

In further evidence of Egyptian origin the Adoration occurs on two Coptic textiles (Fig. 41) and on a Coptic medallion⁶⁰ with the same essential feature of the angel. In passing, however, from Lower Egypt to the more indigenous art of Upper Egypt, the type lost all its Hellenistic style. Also on the textile examples the Magi are beardless and instead of ad-

⁶⁰ Table II, nos. 71, 72, 73.

vancing in a line they are scattered about in the composition. This casual arrangement of the Magi is due either to a primitive horror vacui of the crude Coptic art or to the fact that all the compositions are within circles which do not afford space for representing the Magi in a line.

Group VII-B. *The Byzantine continuation of the Alexandrian-Coptic Type.*

This type, which was fundamentally Hellenistic in character, was not popular, and from the sixth century it encountered the competition of Oriental types which in time supplanted it. It appears in the eighth century

FIG. 41. STRASSBURG: FORRER COLLECTION,
TEXTILE MEDALLION FROM AKMIM, EGYPT.
ADORATION OF THE MAGI.

in Italy in a mosaic of the chapel of John VII⁶¹ in old St. Peter's, a portion of which is now in the sacristy of Santa Maria in Cosmedin⁶² and on a Lombard relief.⁶³ It also occurs in the ninth century in the Byzantine manuscript No. 510 in the Bibliothèque Nationale at Paris⁶⁴ (Fig. 42) and in another Greek manuscript of the tenth century.⁶⁵ In the eleventh century the type appears at Rome in the frescoes of Sant' Urbano⁶⁶ and again at Athens in the mosaics of Daphni.⁶⁷

THE PALESTINIAN-COPTIC TYPE

The dominating features of this Palestinian-Coptic type are its monumental character and its tendency to stylized, symmetrical compositions. The Virgin, instead of being represented either in profile or in three-

⁶¹ Table II, no. 75.

⁶² Table II, no. 76.

⁶³ Table II, no. 77.

⁶⁴ Table II, no. 78.

⁶⁵ Table II, no. 79.

⁶⁶ Table II, no. 81.

⁶⁷ Table II, no. 82.

quarters, is always depicted in strict frontality. The tendency for stylized and symmetrical compositions appears in the fact that either the Adoration of the Magi is balanced by the Adoration of the Shepherds on the other side of the Madonna or that the Magi are arranged two on one side of the Virgin and the other Magus and an angel are placed on the other side to provide the needed symmetry. Invariably the Magi are differentiated in age by their varying beards and one or more angels

FIG. 42. PARIS: BIBL. NAT. MS. GR. 510.
ADORATION OF THE MAGI.

are figured in the scene. When the Adoration of the Shepherds is joined with the Worship of the Wise Men there are two angels present, one summoning the Magi and the other calling the shepherds to the scene.

The Oriental Christians, while they multiplied details in their endeavor to give to all the scenes of the Bible as much historical reality as possible, were not realistic in their artistic methods and always tended to stylize their forms of expression. As the ancient Egyptians and the Assyrians formalized their art, so the Oriental Christians, when their indigenous tendencies began to assert themselves against the older Hellenistic traditions, always tended to represent their figures in their broadest aspect and to give their compositions a symmetrical, monumental character.

The frontal Madonna, so hieratic in character, which is the distinguishing feature of the Palestinian-Coptic type, is purely an Oriental creation. The representation of the frontal Madonna with a nimbus, whether she appears solely as the Theotokos, in the scene of the Flight into Egypt, or in the Adoration of the Magi, is to be considered as a mark either of Eastern origin or of direct Eastern influence.

Group VIII-A. *The Palestinian Group of the Palestinian-Coptic Type.*

The type originated in Palestine. This is shown by its appearance on numerous monuments which may be definitely connected with the Holy Land, by its monumental character which recalls the mosaics of the Church of the Nativity at Bethlehem, and by its adherence to the Syrian liturgy.

In the first place the type appears on three of the metal phials of Monza which, as their inscriptions show, were executed in Palestine toward the end of the sixth century and were brought back to the West by devout pilgrims who had visited the Holy Land. The scene on two⁶⁸ of the phials shows the strictly frontal Virgin nimbed and seated on a bolster while she holds the two year old Jesus, who has a cruciform nimbus, directly

FIG. 43. MONZA: METAL AMPULLA. ADORATION OF THE MAGI AND SHEPHERDS.

in front of her; over her head is figured a large star at which two winged and nimbed angels point, the angel at the left summoning the Magi and the one at the right calling the shepherds from their flocks; the three Magi at the left of the throne are dressed in the traditional Oriental costume, carry their gifts on dishes, and are differentiated one from the other by their beards; at the right of the throne the three shepherds give the balance to the composition. On the third⁶⁹ phial, while the scene preserves the same details and general arrangement, there is a more

⁶⁸ Table II, nos. 83, 84.

⁶⁹ Table II, no. 85.

stylized composition; the shepherds instead of being freely grouped at the right of the throne are depicted standing in a row which rigidly balances the row of three Magi on the opposite side (Fig. 43).

Another example of the symmetrical composition with the frontal Madonna occurs on a full page miniature of the Etschmiadzin Gospels⁷⁰ (Fig. 44) which Strzygowski⁷¹ dates in the first half of the sixth century and attributes to Syria.

A further connection of the Palestinian-Coptic type with Palestine

FIG. 44. ETSCHMIADZIN: GOSPELS. ADORATION OF THE MAGI.

is to be found in the hieratic and monumental character of the composition which appears to reflect the larger design of a mosaic. In a polemic against the Iconoclasts issuing from the Synod of 836 at Jerusalem⁷² it is stated that the Nativity church at Bethlehem was decorated by mosaics representing the Birth of Christ, a Panagia with the Christ Child in her bosom, and the Adoration of the Magi. This Adoration on the western façade is said to have been spared in the sixth century by the soldiers of Chosroes because the Magi wore Persian caps.⁷³ It is then possible, as Dalton says,⁷⁴ that this type as it appears on certain of the smaller objects of Christian art of

⁷⁰ Table II, no. 86.

⁷³ Dalton, *Byz. Art and Arch.*, p. 384.

⁷⁴ Dalton, *op. cit.*, 182.

the fifth and sixth centuries was copied from the mosaics of the Church of the Nativity at Bethlehem, an assumption borne out by the monumental aspect of the composition pointed out above.

Furthermore, the adherence of this type to the Syrian liturgy confirms

FIG. 45. MANCHESTER: JOHN RYLANDS LIBRARY, PANEL FROM IVORY BOOK COVERS OF MURANO. EPIPHANY AND NATIVITY.

its Palestinian origin. The evident importance of the star and the summoning of the shepherds on these Palestinian monuments is paralleled by the importance given to the appearance of the star by the Syrian writers and by the fact that in the Syrian liturgy⁷⁵ the feast of the Adoration of the Shepherds was celebrated at the same time as Epiphany, on January 6. In the fourth century both Ephraem Syrus⁷⁶ and Balaëus⁷⁷ (373-431) write of the appearance of a new star in the heavens at the time of the Nativity and associate with it an angel. By the end of the fifth century the Syrian legend in the "Spelunca Thesaurorum"⁷⁸ develops even more fully the appearance of the new star and the summoning of the Magi by an angel. Passing directly from Palestine to other Mediterranean lands where the Syrian influence was very strong, the type occurs in the sixth century on the ambo of Salonica⁷⁹ and in the mosaics of Sant' Apol-

of the change⁹⁰ from the traditional caps. There is no doubt that this new feature was introduced into the West from the Orient, for in the Menologium of Basil II in the Vatican,⁹¹ which dates about 976, the

FIG. 47. TRIER: STADTBIBLIOTHEK. CODEX EGBERTI. ADORATION OF THE MAGI.

crowns are given to the Magi (Fig. 48). Furthermore, the earliest reference to the crowns appears to be in the Nestorian Liturgy⁹² which is at least older than the middle of the seventh century. In this account the three kings, the King of Persia, the King of India, and the King of China, are described as having come to worship bearing crowns.

Group X. *The Liturgical Byzantine Type.*

This Byzantine type is a combination of the Adoration with the Nativity and the Adoration of the Shepherds. As early as the year 300⁹³ the East celebrated the triple feast of the Birth, the Adoration, and the Baptism on January 6. Moreover the Eastern theologians, as Justin Martyr, Gregory of Nazianzus, John Chrysostom, and Balaeus Syrus,⁹⁴ all considered the Adoration of the Magi as synchronous with the Birth of the Saviour in the cave. When the Western Christmas feast on December 25 was adopted in the East⁹⁵ it was influenced by older traditions;

⁹⁰ Dalton in his *Byzantine Art and Archaeology*, p. 654, says that "crowns first appear in the West in the twelfth century" and that they appear earlier in the East in the Homilies of Gregory of Nazianzus (Paris, Bibl. Nat., gr. 510), and the Vatican Menologium. Both statements may be questioned: the crowns certainly appear in the West as early as the end of the tenth century, and the curious round caps on the Magi in the Gregory Codex can not be taken for crowns.

⁹¹ Table II, no. 79.

⁹⁴ Kehr, *op. cit.*, I, p. 30.

⁹⁵ See page 46, note 41.

at Constantinople the Adoration, according to the Byzantine Liturgy,⁹⁶ was celebrated on December 25, not only with the Nativity but also with the Adoration of the Shepherds, the Conception, the Presentation in the Temple, the Massacre of the Innocents, and the Flight into Egypt. By the eleventh century, when Byzantine iconography was fully

FIG. 48. ROME: VATICAN, MENOLOGIUM OF BASIL II. ADORATION OF THE MAGI.

developed and in the process of final stylization under liturgical influence, the Byzantine scene of the Adoration of the Magi had been permanently modified by this combination feast and had commenced to unite others of the events celebrated at that feast with the composition of the Epiphany (see Fig. 25). Hence these examples⁹⁷ of the Byzantine type represent not only the Adoration of the Magi, but also the Birth of the Saviour, the Adoration of the Shepherds, the washing of the Child by the midwives, which symbolizes the Baptism, and the Adoration of the Angels. Thus the young Jesus in these scenes instead of being seated in His mother's lap, lies in a crib with the ox and the ass adoring Him while the Virgin reclines on a mattress. From the eleventh century on, Byzantine art quite faithfully adheres to this type and the same method of representation is followed in Italo-Byzantine monuments of the same period.

VII

THE MASSACRE OF THE INNOCENTS

The Massacre of the Innocents, the earliest event in the long history of martyrdom which marked the struggle of Christianity against the forces

⁹⁶ Kehrer, *op. cit.*, I, p. 27.

⁹⁷ Table II, nos. 106-110.

of paganism, though frequently referred to in the literature¹ of both the East and the West, was seldom represented on the monuments of the early Christian period. The scene never occurs in the catacombs or on the sarcophagi of Rome. It was in the East that such tragedies of the Gospel history were first felt and depicted in a realistic way.

While there is no Western type of the Massacre, there is a single example among the mosaics of Santa Maria Maggiore which, as a purely symbolic rendering of the scene, may be treated under the head of a Hellenistic type. In the East there is the Syro-Egyptian type which may be designated as the sword type in which the soldiers of Herod slay the children at the point of the sword. Finally, there is the Provençal type which may be characterized in contrast with the Syrian form as the smashing type where the soldiers, instead of using swords, smash the children to the ground. Outside of these three types there are no others, for it was the sword type which became the traditional method of representing the scene throughout the whole history of Christian art.

Group I. *The Hellenistic or Symbolic Type* (Fig. 49).

The scene in the fourth century arch mosaics of Santa Maria Maggiore,² from its unemotional character, falls in that class which in other

FIG. 49 ROME: S. MARIA MAGGIORE, MOSAIC.
THE MASSACRE OF THE INNOCENTS.

scenes we have called Hellenistic. In the left spandril of the arch Herod, enthroned upon a solium, is represented as a Roman general and his soldiers as Roman legionaries. The mothers, their hair unbound and hanging

¹ *The Protevangelium of James*, (Michel, *Évangiles apocryphes*, p. 45), *Pseudo-Matthew* (*op. cit.*, p. 111), *History of Joseph the Carpenter* (*op. cit.*, p. 202), *Gospel of Nicodemus* (*The Apocryphal Gospels, Acts, and Revelations*, Edinburgh, 1890, p. 135), and Matt. ii, 16.

² Table III, no. 1. Richter and Taylor, *The Golden Age of Classic Christian Art*, p. 354; Ainaloff, see abstract in Richter and Taylor, pp. 415-419.

dishevelled down upon their shoulders in token of grief, clasp their doomed infants in their arms and stretch out their hands to Herod in dignified and restrained gestures of supplication. Dignity is the key note of the composition. It is in striking contrast with the barbaric cruelty of the Eastern representations. The whole conception is softened by the spiritual significance presented in the restrained grief of the mothers and in the apparent desire of the infants to be the first Christian martyrs. The composition of this scene, in its spiritual serenity and theological significance, was the product, as Richter says, of that current conception of Christian heroism and faith which, sustained by the hope of rewards in the life hereafter, calmly and gladly faced all earthly trials. In other words, it is the reflection of the classical restraint of the Hellenistic period of Christian art when symbolism, rather than realism, governed the rendering of a scene.

Group II. *The Syro-Egyptian or the Sword Type.*

As the previous scene was the product of the heroic period of Christianity, this Syrian type, where the children are killed at the point of the sword, is in its unqualified realism the product of the coarser cult of a declining Empire. The realistic type is seen in the Rabula Gospels³ written in 586 A. D. at Zagba (Fig. 50). The tribune, clothed in a mili-

FIG. 50. FLORENCE: LAURENTIANA, GOSPELS OF RABULA. THE MASSACRE OF THE INNOCENTS.

tary costume consisting of a short chiton and a pallium caught over his left arm, leans forward on the solium in the same attitude⁴ as in the mosaic of Santa Maria Maggiore. The soldier executing his order holds in his hand a child whom he is about to pierce with his sword. In frantic and unrestrained grief the mother, seeking to ward off the blow with her right arm, rushes forward and grasps the soldier with her left hand.

³ Table III, no. 2.

⁴ For the attitude of the tribune in art see Grüneisen, *Sainte-Marie-Antique*, p. 319.

This form became also the type used in Coptic art. In a fresco of the subterranean church of Deir Abou Heinys at Antinoë⁵ (Fig. 51), dating from the end of the sixth or the beginning of the seventh century, is a representation of the Massacre which appears to have been derived quite directly from the scene in the Rabula Gospels. Herod, seated on

FIG. 51. ANTINOË: FRESCO. THE MASSACRE OF THE INNOCENTS.

a raised dais, is flanked at either side, as in the Gospels, by two soldiers who support a large shield behind the tribunal seat. One of the soldiers has the head of an ass. The actual execution of the children is the same as in the Rabula example. The scene of the Antinoë fresco appears in essentially the same form in a fresco at Bawit,⁶ and the sword type is also used on a Coptic bronze censer,⁷ on a Coptic pyxis in the Louvre⁸ and on a lost panel of the Maximianus chair which is known to us from Trombelli's description.⁹ These six examples, the miniature, the two frescoes, the two ivories, and the censer, include all the representations that I know of the Massacre of the Innocents occurring in the East prior to the ninth century. The Byzantine examples¹⁰ from the ninth century on do not differ essentially from this Syro-Egyptian sword type.

Group III. *The Provençal or Smashing Type.*

The scene on the Berlin fragment¹¹ (Fig. 52), which is the earliest example of the group of ivories which we ascribe to Provence, depicts a soldier, at the command of Herod, about to smash to the ground a child whom he swings above his head by the leg; another child already smashed

⁵ Table III, no. 3.

to death lies before the suppedaneum, on which Herod rests his feet, and behind the soldier stands a grief stricken mother with her hair hanging loose about her shoulders and with her arms raised above her head. Herod here is bearded, and seated in a chair with a back, in contrast to the Ori-

FIG. 52. BERLIN: MUSEUM, IVORY. THE MASSACRE OF THE INNOCENTS.

ental bench; no soldiers flank the tribunal seat. It is in the actual execution, however, that the scene differs so radically from previous representations; not satisfied with the massacre by the sword, the soldier is about to hurl the child against the ground. Cruel and unrestrained as are the Syrian and Coptic examples when compared to the scene on the arch

FIG. 53. MILAN: CATHEDRAL, IVORY BOOK COVERS. THE MASSACRE OF THE INNOCENTS.

of Santa Maria Maggiore, these Eastern representations become mild when contrasted with the barbarism of the smashing type of the Massacre.

A somewhat later rendering of the same type occurs on the Milan book covers¹² (Fig. 53) where the tribune, as in the Eastern examples,

¹² Table III, no. 10.

is flanked on either side by soldiers bearing circular shields, and his short tunic and chlamys caught over the right shoulder resemble the costume of the official in the Rabula Gospels. Like the rendering on the Berlin fragment, the tribune sits in a chair and the soldier swinging a child in the air is nearly identical on the two ivories. On the Milan covers, however, the scene is made more pretentious by increasing the number of the soldiers to five.

Far from being peculiar to these two early Christian ivories, the smashing type may be traced by successive steps in Gaul into Carolingian art. It appears¹³ in a sixth century miniature of the Codex Purpureus

FIG. 54. MUNICH: COD. PURP. (CIM. 2).
MASSACRE OF THE INNOCENTS.

(Cim. 2) at Munich¹⁴ (Fig. 54). About 800 we find a rather crude copy of the scene of the Berlin ivory on the Carolingian cover (see Fig. 169) in the Bodleian Library at Oxford,¹⁵ the iconography of which was largely based on the diptych of which the Berlin fragment was a part. Finally,

¹³ Table III, no. 11.

¹⁴ Grüneisen, *Sainte-Marie-Antique*, p. 350; Beissel, *Gesch. der Evangelienbücher*, p. 84.

¹⁵ Table III, no. 12. Goldschmidt's recent monograph on Early Mediaeval ivories (*Elfenbeinskulpturen aus der Zeit der karol. und sächs. Kaiser*, Berlin, 1916, Pl. XXVII, 67 b) records another plaque (fragment) in the Staatsbibliothek in Munich which is, like

toward the end of the ninth century, or in the tenth century, the same type of the Massacre is figured on two Carolingian ivories, one in the Victoria and Albert Museum¹⁶ and the other in the Bibliothèque Nationale (Suppl. Latin, no. 642, 9393) at Paris¹⁷ (Fig. 55).

As a rule the grounds for connecting certain iconographical types with definite geographical centres are slight and unsatisfactory. In regard to the smashing type of the Massacre of the Innocents, however, we have

FIG. 55. PARIS: BIBL. NAT., IVORY BOOK COVER. MASSACRE OF THE INNOCENTS.

not only a long line of examples ranging in certain sequence from the early Christian period to the Carolingian but we also have a still earlier example, or a prototype, indigenous to Provence.

When the ancient crypt of St. Maximin near Marseilles was unearthed there were discovered four sarcophagi of the first part of the fifth century¹⁸ and the fragments of a much earlier one. These sarcophagi were held by Abbé Faillon¹⁹ and Le Blant to be those to which were transferred the remains of the Magdalene, Sidion, Marcella, and St. Maximin, who, according to tradition,²⁰ came to Provence after the Saviour's death to preach

the Bodleian cover, an adaptation of the early Christian five-part diptych of which the Berlin fragment was a portion. It repeats the scenes and iconography of the Berlin fragment; reading from top to bottom the scenes are the Massacre of the Innocents, the Baptism, and the Miracle of Cana.

¹⁶ Table III, no. 13.

¹⁷ Table III, no. 14.

¹⁸ Le Blant, *Les sarcophages chrétiens de la Gaule*, p. 147.

¹⁹ Faillon, *Monuments inédits de l'apostolat de Sainte Marie-Madeleine en Provence*, I, pp. 339-341.

²⁰ An ancient legend, going back to uncertain sources and frequently repeated in verse and prose, recounts that the Jews, after the Passion of the Saviour, abandoned on a rudderless ship Mary Magdalene, Martha her sister, Lazarus their brother, Sidion the man born blind, Marcella the handmaid, and Maximin one of the seventy-two disciples. The ship, taking its course without human guidance, grounded on the shores of Provence,

the Gospel throughout this region. On the cover of one²¹ (Fig. 56), the sarcophagus which Faillon²² calls the "Sarcophagus of the Holy Innocents," occurs the smashing type of the Massacre of the Innocents. The scene on this sarcophagus, as is to be expected at so early a date, is much simpler than any of the examples I have described. The tribune, *beardless*

FIG. 56. ST. MAXIMIN: SARCOPHAGUS. THE MASSACRE OF THE INNOCENTS.

and clothed in tunic and chlamys, is seated upon a sella curulis instead of a chair; no soldiers flank the tribunal seat; and at his command one soldier swings a child by the leg while another holds in his arms a child that he has just snatched from the mother who stands with hands clasped and her hair hanging loose about her shoulders.

The sarcophagus of the crypt of St. Maximin may be dated in the early part of the fifth century, and is a local product, as is shown by the heads on the corners of the cover, which are identical with the heads on the sarcophagi of Arles²³ where during the fourth, fifth, and sixth centuries there was an active school of sarcophagi carvers who spread their works through the whole region.²⁴ We find, then, that the earliest example of the peculiar scene which connects into a group the early Christian and Carolingian monuments cited above, occurs on a sarcophagus made in Provence.

The provenience of the smashing type of the Massacre may be further defined by the close connection of the church of St. Maximin, where our sarcophagus was found, with the Abbey of St. Victor at Marseilles,

where the little band landed, and began to preach the Gospel and to found churches throughout the region. Finally, four of their number, the Magdalene, Marcella, Sidion, and St. Maximin, were buried in the little church of St. Maximin which is situated about thirty miles from Marseilles.

²¹ Le Blant, *op. cit.*, pl. LVI/1.

²² Faillon, *op. cit.*, p. 734.

²³ Le Blant, *Les sarcophages chrétiens de la ville d'Arles*, pls. XIX, XX.

²⁴ Le Blant, *Sarcophages chrétiens de la Gaule*, p. v.

of which it was a dependency. The Holy Innocents were worshipped at Marseilles long before a feast day for them was set aside by the Gallican church. Although the feast must have been instituted during the fifth century, it is not to be found in the Latin calendars and liturgical books before the sixth century.²⁵ Nevertheless, from the early part of the fifth century their worship existed at Marseilles, where their relics, brought from the Orient by St. Cassianus, had been placed by the monks of St. Victor in the celebrated crypt of their abbey.²⁶ Although Cassianus retained in his church at Marseilles the greater part of the relics which he had brought with him from Syria, he distributed portions of them throughout Provence²⁷ and there thus grew up among the ancient churches of the region the custom of burying along with the remains of their Saints some relic of the Holy Innocents.²⁸ St. Cassianus, returning from the Orient, founded the church of Saint Victor shortly after the year 414, a date to which our sarcophagus, from its style, might easily be ascribed. Furthermore, the little church at St. Maximin was a dependency of the famous church at Marseilles. All this suggests that the sarcophagus owes the peculiar scene of the Massacre to the fact that it was to be used to contain a portion of the relics of the first martyrs, presented to the church of St. Maximin by Cassianus, which were buried along with the traditional remains of the first apostles of Provence when their bodies were transferred to the new sarcophagi in the early part of the fifth century.

The influence of the scene of the Massacre in the crypt of St. Maximin upon the subsequent art of Provence and later on Carolingian art is explained by the renown which this crypt, where the bones of the Blessed Magdalene were supposed to rest, enjoyed during the Middle Ages. The discussion of the preceding scenes has already indicated that the Berlin fragment and the Milan book covers were themselves executed in Provence. In the case of the Bodleian book cover, the Munich miniature and the two ninth or tenth century ivories, which as Carolingian work are to be assigned to northern rather than to southern France, all apparently derive their rendering of the Massacre of the Innocents from the "Sarcophagus of the Holy Innocents" at St. Maximin.

²⁵ Duchesne, *Origines du culte chrétien*, p. 257.

²⁶ Le Blant, *op. cit.*, p. 156.

²⁷ Faillon, *op. cit.*, p. 741.

²⁸ Faillon, *op. cit.*, p. 738.

Several mediaeval manuscripts²⁹ of the tenth to the fifteenth century which are copies of an earlier Life of Mary Magdalene give evidence of traditional reverence for the crypt. In a Life of Mary Magdalene in Magdalen College at Oxford, purporting to be a copy of her life written in the ninth century by Rabanus Maurus, is a passage which reads:³⁰ "This place has since [that is, since the deposition there of the remains of Maximin and St. Mary Magdalene] become so sacred that no king or prince, or any one else, however endowed with power or wealth, can enter into the church here in order to ask for a blessing, except he shall have first put down his arms and set aside all angry passions, so that, at length, he may enter with all humility and devotion." It is related that in 935 Count William and his son Odo made a pilgrimage there³¹ and that in 1254 St. Louis and the Sire de Joinville visited the famous crypt.³²

It was in Provence, then, where the relics of the Holy Innocents were first worshipped and where their remains, jealously guarded in the various churches, were revered through the whole region, that this striking manner of representing the Massacre was created. It was probably in the church of St. Victor at Marseilles, to which the relics of the Innocents were brought by Cassianus in 414 and whence the cult in Provence emanated, that the type originated. Finally, it is in the famous crypt of St. Maximin, a dependency of St. Victor, that we find the earliest example of the smashing type of the scene, and so far as the evidence shows, it was from this centre that the curious bit of iconography spread, at the hands of devout pilgrims, through Gaul, and thus found its way into the Munich manuscript and the Carolingian ivories.

VIII

CHRIST AMONG THE DOCTORS

The first appearance of Christ in public, when He confounded the doctors in the temple, was not a popular scene during the early Christian period and until Byzantine times no type, in any appreciable sense, appeared. The Byzantine type, when developed, followed the canonical account in Luke which relates that Christ as a child of twelve years, having

²⁹ These manuscripts are discussed by Taylor, *The Coming of the Saints*, pp. 93, 123.

³⁰ Taylor, *op. cit.*, p. 121.

³¹ Faillon, *op. cit.*, I, p. 805.

³² *The Memories of the Lord of Joinville*, trans. by Ethel Wedgwood, 1906, p. 341.

lost His way, was found by His parents disputing with the doctors in the temple. As a type it always represents the Christ Child seated upon a throne in the temple where the Virgin, usually followed by Joseph, finds Him among the doctors. Besides this formal and developed Byzantine type there also exists a unique apocryphal rendering of the scene. On the ivory book covers of Milan¹ the type is derived from the Gospel of Pseudo-Matthew and depicts an earlier episode when Christ, as a very young child, having been sent to learn His letters of a certain master Levi, confounded the master by His learning.

The Byzantine Type.

While the scene of Christ among the Doctors is absent from monuments of assured Eastern origin during the first eight centuries, its presence in the ninth century on purely Byzantine works leads one to suppose that it was constituted, like other Byzantine types, about the sixth century in the East. Sporadic earlier examples of the scene occur in the West, as on a sarcophagus of Perugia,² ascribed by De Rossi to the fourth century, and another in Sant' Ambrogio at Milan.³ On the Perugian sarcophagus Christ is seated on a raised throne and holds in His left hand a volume, while He extends His right hand in a gesture of speech; between the columns to the right of Jesus is the Virgin, followed by Joseph, and in the seven other niches are eight doctors.

The regular Byzantine form with Christ seated on a raised throne with three doctors on either side, and with the Virgin and Joseph entering the temple from left or right, occurs in the ninth century in the Homilies of Gregory of Nazianzus⁴ and in the eleventh century in the Greek manuscript 74 of the Bibliothèque Nationale at Paris⁵ (Fig. 57). After the ninth century when this rendering entered the Ottonian and Italo-Byzantine art of the West, certain minor changes took place in the composition. In the tenth century in the Codex Egberti⁶ there are only four doctors depicted; in the eleventh century the frescoes of S. Angelo in Formis⁷

reduced the doctors to two, and the Virgin and Joseph, instead of entering from the side, look down on opposite sides from behind the throne where Christ is seated; in the twelfth century on the doors of Benevento⁸ Joseph is omitted from the composition.

The Provençal Type.

The Milan ivory (Fig. 58) depicts Jesus, small of stature and raised above the other figures on a high seat, disputing with a doctor who stands before Him; behind the master are two pupils carrying books and listening to the words of Jesus. This scene represents one of the early incidents related in the Gospel of Pseudo-Matthew, when Jesus was sent to learn

FIG. 57. PARIS: BIBL. NAT., MS. GR. 74.
CHRIST AMONG THE DOCTORS.

His letters from a Jewish doctor. While the only canonical account of Christ among the doctors is the story of the twelve-year-old Child in Luke, the Gospel of Pseudo-Matthew gives the event a different and more amplified treatment, telling at some length of three different occasions when Jesus, before He was twelve, astonished the doctors with His learning. First, when He was scarcely five, having dumbfounded a certain Zachyas with His wisdom, He was confided by His parents, at the advice of this doctor, to a certain master Levi, of whom He might learn His letters; Jesus, under Levi, on refusing to name the first letter was struck by the master, whereupon He stupefied him by His knowledge of the letters and speaking with a tone of command to the children of Israel who were present, He silenced them all by the wonder of His words.⁹ "There came a second time," the account goes on to relate, that Joseph and Mary were sought by the people to send Jesus to learn His letters at school.¹⁰ This time, when Jesus was punished by the master for His refusal to answer, the master died. Then, for a third time, the Jews demanded that He

⁸ Venturi, *Storia*, III, fig. 643.

⁹ Michel, *op. cit.*, ch. XXX, pp. 133-139.

¹⁰ Michel, *op. cit.*, p. 151.

be taken to another master and with fear His parents complied.¹¹ "Now when Jesus had entered the school, guided by the Holy Spirit, He took the book from the hands of the master, who taught the law, and in the presence of all the people who saw and heard Him, He began to read, not that which was written in the book, but He spoke in the spirit of the Living God." Thus He taught them with so much force and grandeur that when

FIG. 58. MILAN: CATHEDRAL, IVORY BOOK COVERS. CHRIST AMONG THE DOCTORS.

Mary and Joseph came for Him the master said unto them, "You have given me not a disciple, but a master." It is obviously one of these occasions that the artist of the Milan ivory has sought to depict, for the small stature of Jesus, the gestures of Jesus and the master which show they are in a discussion, the switches against the base of Jesus's seat, and the two smaller figures carrying books, make it impossible to interpret the scene as other than young Jesus before the Jewish master.¹²

IX

THE BAPTISM

The representations of the Baptism on the monuments of the early Christian period do not group themselves into obvious local divisions. At

¹¹ Michel, *op. cit.*, p. 153.

¹² A curious ivory in the British Museum (Dalton, *Catalogue of the Early Christian Antiquities in the British Museum*, no. 293, p. 51), whose spurious appearance is marked, shows the young Jesus of small stature standing, with a book in His hand, on the drum of a column from which He is expounding the law to the master at His right, who raises his hand in astonishment, and to a pupil at the left, who stands with a book in his hand looking at the preaching child. Besides the unique composition of the scenes on this

the same time that they show a marked uniformity of type on all monuments, they also present unique features of composition in nearly every specific example. This general similarity and specific individuality of the various scenes is due in part to the fact that the Baptism, which was usually represented in its symbolical significance by scenes from both Testaments,¹ was uncommon during the first few centuries of Christianity. Like all the Hellenistic scenes, it was essentially symbolic but unlike some of them its significance was universally the same. Therefore in the East, where so many of the New Testament scenes were treated more in the light of historical events than as symbols, its representation tended to preserve the traditional composition. None the less, the broad division between the Eastern and Western scenes is fairly manifest. Such features as the hand of God, with or without rays emanating from it, the personification of the Jordan, ministering angels, nimbi on the Saviour and John the Baptist, and the bearded Christ do not occur in the Western representations. In the Western scenes Christ is never immersed in the Jordan above His knees, while in the East He is usually represented in the waters up to His waist. The types, however, do not stand out clearly and are not always consistent. This Western, or Hellenistic, type is characterized by such details as the childlike figure of Christ immersed only to His knees and by the manner in which the waters of the Jordan appear to fall like a cataract. The other features of the type are principally negative ones. The Provençal group, within the Hellenistic type, is exceptional, for it is both obvious and distinct from the other forms of the scene. The distinguishing feature, unique to the group, is the pedom, or shepherd's crook, which John the Baptist carries. The Alexandrian-Coptic type is characterized by the personification of the Jordan and the ministering angels, while the Palestinian-Coptic is essentially the same save for the absence of the fleeing Jordan. The two Syrian examples of the scene are similar enough to form a group but they can not be said to present an apparent type.

ivory and the poor character of the work, the representation of a bearded angel in the Baptism convinces me that at best the work could not have been done in the early Christian period.

¹ Fleury, *L'Évangile* I, p. 102: the Baptism was often symbolized by the Passage of the Red Sea, by Moses Striking Water from the Rock, by Christ and the Samaritan Woman at the Well, etc.

Group I. *The Hellenistic Type.*

Since the Baptism was so frequently represented by Old Testament scenes, there remain only a few catacomb examples of the actual Baptism.² These in themselves were not sufficient to have played any important part in the subsequent development of the scene on Western sarcophagi. One feature of these catacomb representations is interesting (Fig. 59). The dove in the frescoes prior to the fourth century, instead of descending directly upon the head of Jesus while He stands in the Jordan, appears to

FIG. 59. ROME: CEMETERY OF LUCINA. THE BAPTISM.

be flying toward the scene.³ This manner of depicting the scene corresponds more faithfully with the Gospel accounts than do the examples after the third century. None of the Evangelists say that the Holy Spirit descended upon Christ while He was in the water, and Matthew (iii, 16), Mark (i, 10), and Luke (iii, 21) write that when Jesus had been baptized He went straightway out of the water and then the Spirit of God descended upon Him like a dove. In the fourth century, however, the sculptors of the sarcophagi brought the two incidents, of the Baptism and the descent of the dove, into one scene.

On the sarcophagi Christ is always beardless, small like a child, and never immersed in the waters of the Jordan more than to His knees. John the Baptist is dressed in exomis or perizoma in the catacomb frescoes; in

² Table IV, nos. 1-5. The following are some of the best discussions of the Baptism: Strzygowski, *Iconographie der Taufe Christi*; Heisenberg, *Grabeskirche und Apostelkirche*, pp. 236-239; C. Jacoby, *Ein bisher unbeachteter apokrypher Bericht über die Taufe Jesu*; C. F. Rogers, *Baptism and Christian Iconography*; and Leclercq in Cabrol's *Dictionnaire d'archéologie chrétienne et de liturgie*, s. v. "Baptême."

³ In the Lucina fresco it is to be noted that Christ is stepping out of the water.

the sarcophagi he generally wears a pallium instead of the shepherd's garment. The method of representing the Jordan as an apparent waterfall descending like a cataract behind the figure of Christ is characteristic of the Western scenes⁴ (Fig. 60). Although this feature does not occur on all the sarcophagus representations of the Baptism, it is peculiar to the greater part of them and is in marked contrast to the Eastern manner of

FIG. 60. ROME: SARCOPHAGUS. THE BAPTISM.

depicting the Jordan as a river in which the Saviour stands waist deep. The Hellenistic scenes are all very simple and never include such details as the assisting angels and the personification of the fleeing Jordan seen on Eastern monuments.

The main features of the Hellenistic manner of representing the Baptism are the childlike Christ and the frequent piling up of the waters of Jordan like a waterfall. The artistic tradition that Christ should be depicted as a child in contrast to the figure of the Baptist was universal inasmuch as even the Eastern scenes not infrequently show the Saviour as very small of stature. The dates of Christ's birth and crucifixion, implied by the Gospels, make Him more than twenty years at the time of the Baptism. This and the statement of St. Luke that there was only six months difference between the ages of John and Jesus are inconsistent with the

⁴ Table IV, nos. 7-13.

apparent difference in their ages on the monuments. A possible explanation, suggested by Leclercq,⁵ is that the artists were perhaps following a more authentic tradition than had the Evangelists in the Gospels. A more plausible suggestion, however, is Le Blant's explanation of the small stature of the Saviour by the Christian concept of the Baptism as a birth into life immaterial—whence the name "infans" given to the baptized.⁶

A more distinct and characteristic detail of this Hellenistic type is the representation of the Jordan as a waterfall. This feature, while it appears only on Western monuments and principally on those of Gaul, offers, perhaps, some evidence of the general Hellenistic character of the type and even of its connection with Alexandria. In the "Chronicon Paschale"

FIG. 61. SOISSONS: SARCOPHAGUS. THE BAPTISM.

of Alexandria⁷ we read that when Jesus was baptized in the Jordan, "the Jordan turned back." "The Lord said unto John, 'say to the Jordan, stop, the Lord has come among us,' and so the waters stopped." This Alexandrian description of the event seems to be exactly the phenomenon that the sculptors were seeking to represent on the sarcophagi. By what ap-

⁵ Leclercq, *op. cit.*, col. 356.

⁶ Le Blant, *Étude sur les sarcophages chrétiens de la ville d'Arles*, 1878, p. 27.

⁷ Leclercq, *op. cit.*, col. 348; *Chronicon Paschale*, Bonner Corp., p. 420 sq; the *Encyclopaedia Britannica*, s. v. "Chronicum" says that the manuscript was compiled between 610-614 A. D.

pears to be a waterfall they sought to show the waters of the Jordan piled back upon their source in order to leave a shallow space in the river bed where the first sacrament might be performed. On one sarcophagus the river instead of resembling a cataract or waterfall, as it usually does, rises behind Jesus like a huge wave⁸ (Fig. 61). There could have been no direct relation between the text and the representations of the Baptism on the sarcophagi inasmuch as the "Chronicon" was written as late as the beginning of the seventh century. It is supposed, however, to have been compiled from earlier sources and may, therefore, preserve, in the case of the Jordan turned back upon its source, an older Hellenistic tradition which was also current among the sarcophagi carvers.

Group II. *The Provençal Type.*

The Provençal type, which is listed as a sub-group of the Hellenistic type, is distinct and uniform. The monuments which show this type are three ivories whose Provençal provenience has become evident in the discussion of the preceding scenes: the Berlin fragment, the Milan book cover (Fig. 62), and the Werden casket in the Victoria and Albert Museum.

FIG. 62. MILAN: CATHEDRAL, IVORY BOOK COVERS. THE BAPTISM.

A fourth is the Carolingian book cover in the Bodleian Library at Oxford which appears to have been in part copied from the diptych of which the Berlin fragment is a portion (see also a Carolingian ivory at Munich, note 15, p. 64). All these ivories show Jesus with long hair, beardless and small, and, with the exception of the Berlin fragment (Fig. 163), they show Him immersed in the water to His knees.⁹ The fact

⁸ Table IV, no. 8.

⁹ Table IV, nos. 19-22.

that Jesus on the Berlin ivory wears a plain nimbus and on the Werden casket wears a cruciform nimbus has little or nothing to do with the iconography, as there is every reason to believe that the nimbi were added long after the ivories had been carved. This assumption is borne out by the manner in which the waves of the Jordan on the Berlin fragment cut across the nimbus, which is only a double incised line on the background. John the Baptist on these four ivories is bearded, wears the exomis instead of the pallium, and carries in his hand a pedum, or shepherd's crook, which is the most distinguishing feature of the group. In the same manner all the monuments represent the Jordan like a cataract falling behind the figure of Jesus on whose head descends the Spirit of God in the form of a dove. The Werden casket (Fig. 63), which in so many of its scenes duplicates the iconography on the Milan covers and is even considered by some

FIG. 63. S. KENSINGTON: VICTORIA AND ALBERT MUSEUM, IVORY CASKET. THE BAPTISM.

authorities to have been done by the same hand, adds a curious detail in the form of a personification of the Jordan seated at the left of the scene. With his arms full of water plants, the river god sits upon the top of a little mountain and from an overturned urn at his side the waters of the Jordan flow down to Christ.

The pedum, which is the feature distinguishing the group from all others, does not appear in any of the representations on the sarcophagi. In fact, the only other example of this shepherd's crook that John carries occurs in the fifth century mosaic in the Arian baptistery (Santa Maria in Cosmedin) at Ravenna.¹⁰ All the other details of the composition of the Provençal type occur on Gallic sarcophagi and in many cases are peculiar to the West. The beardless and childlike Christ, which was the regular

¹⁰ Table IV, no. 30.

Hellenistic type in the Western representations, appears on two sarcophagi of Arles, one of Soissons, and on another at Mas d'Aire.¹¹ The Jordan depicted like a cataract occurs on all four of these monuments. In other words, the characteristic elements of the scene on the ivories, with the exception of the pedum, were customary parts of the composition on the sarcophagi of Gaul. While the analogies with the Provençal monuments only show that the connection of the type with Provence is possible, the important fact that is established by the scene of the Baptism on the ivories is the close relation of the group. In the case of the Bodleian cover (see Fig. 169), a Carolingian work of about 800 that was carved somewhere in the north of France, it is interesting to be able to show so intimate a connection on the part of a monument of this period with the early art of Provence.

EAST.

The features which appear to be peculiar to the Oriental representations of the Baptism are the bearded Christ, the fleeing Jordan of the Egyptian variant, and the assisting angels. Minor characteristics which

FIG. 64. FLORENCE: LAURENTIANA, GOSPELS OF RABULA. THE BAPTISM (THE HAND OF GOD, OMITTED IN THE CUT, APPEARS IN THE ORIGINAL).

are not so distinctive are the immersion of Christ to His waist, the nimbi on Jesus, John, and the angels, and the hand of God with the rays of light issuing from it.

¹¹ Table IV, nos. 10, 13, 8, 9.

Group III. *The Syrian Group.*

The only two examples, miniatures in the Rabula (Fig. 64) and the Etschmiadzin Gospels (Fig. 65), which form this group, while they

FIG. 65. ETSCHMIADZIN: GOSPELS. THE BAPTISM.

possess many features in common, are not sufficiently alike and distinct enough from other representations to form a type.¹² On both manuscripts Christ, who is immersed to the waist, is small, has dark hair, and though beardless in the Etschmiadzin Gospels is bearded in the Rabula Gospels. Both scenes show John the Baptist bearded and wearing a pallium and depict the hand of God above the dove to complete the Trinity.

Group IV. *The Alexandrian-Coptic Type.*

The distinguishing features of this group are the personification of the Jordan as a fleeing river god and the appearance of one or more angels as attendants at the Baptism. The type, if such we may call it, occurs on the Maximianus chair¹³ (Fig. 66), an ivory in the British Museum¹⁴ (Fig. 67), and in one of the Bawit frescoes in Egypt¹⁵ (Fig. 68). The fact that the iconography of the Baptism, as of so many other scenes, on the Maximianus chair is also represented on the Egyptian ivory in the British Museum and in Egyptian frescoes, tends to confirm not only the Alexandrian origin of the Maximianus chair but also the existence of an Alexandrian-Coptic type of the Baptism.

¹² Table IV, nos. 23, 24.

¹³ Table IV, no. 25.

¹⁴ Table IV, no. 26.

¹⁵ Table IV, no. 27.

To this Alexandrian-Coptic type must be added the scene on the gold medallion from Cyprus in Strzygowski's collection.¹⁶ While its general workmanship, as well as the consistent use of the nimbus on Christ, the Baptist, and the angels, recalls the Palestinian-Coptic type of the scene, the

FIG. 66. MILAN: MUSEO ARCHEOLOGICO, IVORY PANEL OF CHAIR OF MAXIMIANUS. THE BAPTISM.

FIG. 67. BRITISH MUSEUM: IVORY PANEL. THE BAPTISM.

essential features of the medallion classify the scene with the Egyptian ivory in the British Museum. In both scenes, besides the dove descending on the head of Christ, occurs the uncommon feature of the hand of God with rays of light emanating from it. On the Cyprus medallion, although three personifications appear, one of them represents the fleeing Jordan

¹⁶ Table IV, no. 32, and Errata. This medallion was first classified from a description in which the hand of God and personification of the fleeing Jordan were not noted. Upon verification with a photograph, it was found that these features did appear and that the medallion was to be classified in the Alexandrian-Coptic instead of in the Palestinian-Coptic group.

which is the distinguishing feature of the Alexandrian-Coptic type of the Baptism.

In Egypt the Hellenistic type was gradually altered, as it became indigenous to Egypt, by the growing Oriental influences both traditional to the land of the Pharaohs and introduced into the country from Syria and Palestine. This tendency of the type to become more Oriental in character appears in comparing the scene on the Maximianus chair with the Bawit fresco; on the chair the figure of Christ is small and beardless after the Hellenistic representations; but in the fresco the bearded Christ recalls the figure of the Rabula Gospels.

Although it may be presumed that the personification of the fleeing

FIG. 68. BAWIT: FRESCO. THE BAPTISM.

Jordan as it is represented in the scene of the Baptism on the Maximianus chair originated in Alexandria, there is no definite connection of the type, irrespective of the monuments on which it occurs, with that city. While the "Chronicon Paschale," compiled in the early seventh century in Alexandria, personifies the Jordan and describes the river as having fled at the words of the Almighty,¹⁷ a similar story is related by several Syrian writers and Theophany sermons.¹⁸

Besides the personification of the river, the regular appearance of one or more angels as attendants at the Baptism is another marked feature of the type. The presence of these angels Leclercq considers to be a characteristic detail of Oriental, and particularly of Alexandrian ivories.¹⁹

¹⁷ Jacoby, *op. cit.*, p. 17.

¹⁸ Jacoby, *op. cit.*, pp. 42, 43, 44, 45.

¹⁹ Leclercq, *op. cit.*, col. 368.

Group V. *A Ravenna Group.*

The two scenes of the Baptism on the fifth century mosaics of San Giovanni in Fonte²⁰ and the Arian Baptistery (Santa Maria in Cosmedin)²¹ (Fig. 69) at Ravenna show a strange mixture of Eastern and Western features. The restorations of the mosaics of San Giovanni have greatly altered the iconography. It is probable, however, that the scene of the Baptism in

FIG. 69. RAVENNA: ARIAN BAPTISTERY. THE BAPTISM.

Santa Maria in Cosmedin is a copy of the earlier scene in San Giovanni in Fonte. Such being the case, we may with Strzygowski ascribe to the restoration of the earlier mosaic the patera in the hand of the Baptist, the substitution of the cross for the pedum, and the placing of the nimbus on John's head. These two scenes do not classify very satisfactorily. In the first place the fact that Jesus is immersed in the Jordan to His waist is more characteristic of Eastern representations and the presence of the personification of the Jordan in both scenes points to Alexandria. The figure of Jordan, however, is here used only as a symbol of locality, and is not represented as fleeing.

Group VI. *The Palestinian-Coptic Type.*

The characteristics of this group, with the exception that the personification of the Jordan does not figure in the compositions, are not very different from the Alexandrian-Coptic type. Aside from the absence of the river god the only really distinguishing feature of the group is the consistent use of the nimbus on all the figures. In the other groups there have been a very few scattered examples where the nimbus was used, but

²⁰ Table IV, no. 29.

²¹ Table IV, no. 30.

in this type all the figures, including the angels, receive the nimbus. The Palestinian monuments on which this type occurs are a Monza phial²² (Fig. 70), an ampulla in the Kaiser-Friedrich Museum,²³ and an eighth

FIG. 70. MONZA: AMPULLA. THE BAPTISM.

century (?) panel in the Sancta Sanctorum.²⁴ In the sixth century the type appears in Egypt on a panel of the Golenisheff Collection²⁵ (Fig. 71), on a medallion from Akmim,²⁶ and there is possibly an example on an ivory in the British Museum²⁷ of the seventh century (? see p. 71, note 12). In the eighth century the type occurs in Italy in the frescoes of St. Pontianus at Rome²⁸ and San Gennaro at Naples.²⁹ Save for the addition of the attendant angel and the use of the nimbi, the scene on the Golenisheff panel recalls the representation of the Rabula Gospels in that it is the only example in the group to show Jesus with a beard. The ivory in the British Museum presents a suspiciously curious scene in which the attendant angel is heavily bearded.

²² Table IV, no. 31.

²³ This example, which was listed after the table in the Appendix had been set up, is of Palestinian-Coptic type (see *Ämtliche Berichte aus den Königlichen Kunsts.*, XXXV, no. 2, Nov. 1913, fig. 21, p. 40). Christ is small, beardless, with long hair, wears a nimbus, and is immersed to His waist in the Jordan. John the Baptist is bearded and nimbed, and wears a pallium. A dove descends upon the head of Christ, while two nimbed angels at the left of the composition complete the scene. In the same collection (*op. cit.*, fig. 22) is another scene of the Baptism on a piece of beaten bronze from Pergamon. Although much cruder and simpler than the rendering on the ampulla, this is also Palestinian-Coptic. Save for the absence of all nimbi and the presence of only one angel, it is essentially the same as the scene on the ampulla.

²⁴ Table IV, no. 36.

²⁵ Table IV, no. 33.

²⁶ Table IV, no. 34.

²⁷ Table IV, no. 35.

²⁸ Table IV, no. 38.

²⁹ Table IV, no. 39.

Group VII. *The Byzantine Group.*

Unlike so many other scenes in Byzantine iconography, the Baptism does not present a type that in its origin is clear and distinct from the

FIG. 71. PETROGRAD: GOLENISHEFF COLLECTION, PANEL. THE BAPTISM.

other types. A carved column-drum of the sixth century in the Museum of Constantinople may present what was the proto-Byzantine type.⁸⁰ It shows a bearded (?) Christ, the personification of the Jordan, and two angels assisting at the sacrament. Save for the bearded Christ, which is doubtful, it is the same as the Alexandrian-Coptic type. It is not unlikely that the Byzantine method of representing the Baptism may have had some such origin, for Constantinople in the sixth century was a clearing house for all the artistic ideas of the Orient. The personification of the Jordan as well as the number of the angels does not seem to have conformed to any rule.⁸¹ In the Menologium of Basil II (976-1025) there is no personification and only two angels,⁸² while in the eleventh century Ms. 74 at Paris (Bibl. Nat.) there are five angels and a small figure of the Jordan.⁸³

⁸⁰ Table IV, no. 28.

⁸¹ Dakon, *Byzantine Art and Archaeology*, pp. 654-655, says that two angels were usually represented until the eleventh century and that there were three or more thereafter.

X

THE MIRACLE OF CANA

The various methods of representing the Miracle of Cana in Christian art divide into four general types, the Hellenistic, the Alexandrian-Coptic, the Palestinian-Coptic, and the Byzantine. ¹The Hellenistic type is purely symbolic and the disciples are reduced to only one, while Christ, like a magician, is represented touching with His wand the jars of water which vary in number from one to seven. ²The Alexandrian-Coptic is transitional between the earlier symbolical type and the more indigenous and narrative type of the East; it retains the symbolic character of the Hellenistic type by preserving in the scene the one disciple and by continuing to represent Christ with His wand as a kind of magician; yet to give a slightly more narrative cast to the scene it introduces the figure of one servant who pours the water into the jars. ³The Palestinian-Coptic type introduces the Virgin into the scene and appears to fix the number of jars, in accordance with John ii, 6, as six. ⁴The Byzantine is the fully developed and historical type in which two servants pour the water into six jars, the Virgin is always present, and the additional feature of the *wedding feast* is added to the composition.

THE HELLENISTIC TYPE

In its purely symbolic character the Hellenistic type of the Miracle of Cana is in no wise different from other Hellenistic scenes. While recounted only in the Gospel of John (ii, 1-10), which differs so noticeably from the Synoptic Gospels by the marked symbolic interpretation that it puts upon the miracles, and was one of the leading factors in moulding the entire cycle of early Christian symbolism, the episode was considered by theologians as the first authentic miracle of the Saviour. During the third and the fourth centuries it appears to have gained great theological importance, and became, in combination with the miracle of the loaves and the fishes, a symbol of the Eucharistic Transubstantiation.

The groups of this Hellenistic type which are here constituted are primarily based on the number of jars represented in the various scenes. While the number¹ of jars was a subject of mystical contemplation and

¹ De Mély, *Vases de Cana*, in *Mon. Piot*, X, 1903, p. 156.

intricate symbolism during the Middle Ages, there is no evidence that it played an important part in the symbolism during the early centuries of Christian art. Nevertheless it offers an easy means of classifying the variations of the Hellenistic type.

Groups I-VI.

In these groups the only variation in the representation is the number of jars, varying from one to seven, which Christ touches with His wand. There is only one example, a sarcophagus of Numidia (Fig. 72), on which the jars are reduced to one.² Two jars occur on two sarcophagi of Arles, a sarcophagus of Toulouse, and on two sarcophagi of Rome

FIG. 72. ALGIERS: SARCOPHAGUS
FROM NUMIDIA. THE MIRACLE OF
CANA.

which differ from the others in the detail that Christ does not carry a wand.³ The group with three jars is by far the largest; it includes two sarcophagi of Arles, one of Gerona, one of Marseilles, one of Saragossa, and eight of Rome⁴ (Fig. 73). On three sarcophagi of Rome the number of jars is increased to four.⁵ Five jars appear on six sarcophagi of Rome, and on one of Saragossa; as a rare exception to the rule, one of the Roman representations omits the disciple who usually accompanies the Saviour.⁶ The variation with six jars occurs first in a third century

² Table V, no. 1.

fresco in the catacomb of SS. Pietro e Marcellino and later, in the fourth century, in another fresco in the same catacomb; it also appears on

FIG. 73. ROME: SARCOPHAGUS.
THE MIRACLE OF CANA.

a sarcophagus in Madrid and on two of Rome where again the disciple is omitted. Included in this group is a copper cover from Alexandria and the silver casket of Milan which has sometimes been ascribed to the same centre.⁷

Group VII. *Seven Jars.*

The number seven is peculiar to the representations on the "Roman glass"⁸ (Fig. 74). It is true that the scenes on these pieces of glass are more symbolic in appearance, for the disciple is always omitted and the solitary Christ, as a kind of thaumaturgist, is depicted touching with His wand the seven stone jars. In addition to these glass examples the seven jars appear on the doors of Santa Sabina at Rome⁹ which are probably of Eastern execution.

⁷ Table V, nos. 31-32, Group VI. All the writers on the silver casket in the church of San Nazzaro at Milan have seen evidence in it of late Hellenistic workmanship. For my own part, I feel that it exhibits, especially in the scene of the Adoration of the Magi (?), a freedom of composition and a disregard of tradition incompatible with early Christian workmanship. H. Graeven, *Zeitschrift für christliche Kunst*, 1899, taf. I; A. Riegl, *Die spätromische Kunstindustrie*, p. 106; Dalton, *Byzantine Art and Archaeology*, p. 563.

⁸ Table V, nos. 39-44.

⁹ Table V, no. 38.

EAST

The scene of the Miracle of Cana does not appear to have been as popular in the East as it was in the West. As a rule the scenes of de-

FIG. 74. ROME: VATICAN, BOTTOM OF GLASS CUP. RESURRECTION OF LAZARUS AND MIRACLE OF CANA.

veloped theological allegory and of Hellenistic origin prevailed in the West as the Occidental type while in the Orient they were often supplanted by scenes more personally connected with the lives of the Saviour and the Virgin. This tendency of the East to give actual color to all the events of the New Testament disguised the symbolism of the older Hellenistic scenes. For example, in the Miracle of Cana the realistic expansion began by the addition to the Hellenistic type of one servant pouring the water; then the Virgin was introduced into the composition; and finally in the Byzantine type the scene was made completely historical by the introduction of the wedding feast.

Group VIII-A. *The Alexandrian-Coptic or Transitional Type where one servant is added to the Hellenistic Type.*

The Alexandrian-Coptic type marks a transition from the Hellenistic type of symbolic character to the more historic and indigenous types of Palestine and Byzantium. If Alexandria was the centre from which the old symbolic type originally spread, it is to be expected that any subsequent types originating there would preserve much of the earlier form.

FIG. 75. RAVENNA: IVORY PANEL OF CHAIR OF MAXIMIANUS. THE MIRACLE OF CANA.

The introduction of the one servant, on the other hand, shows the modification of the Hellenistic type in the direction of Oriental realism.

This transitional type occurs on a sarcophagus at Civit  Castellana¹⁰ and on a silver vase formerly in the Bianchini collection at Rome¹¹ whose marked beauty of execution and Hellenistic figures afford some evidence of the Alexandrian origin which is indicated by its iconography. The type also occurs on the ivory chair of Maximianus at Ravenna.¹² On this ivory (Fig. 75), Christ wears a nimbus and bears the regular Coptic cross instead of the wand. Six jars are represented, into which a servant is pouring the water, while behind him stands a disciple with his hand raised in surprise at the miracle. This scene on the Maximianus chair is repeated on a Coptic medallion in the Gans collection at Berlin,¹³ from Egypt (Fig. 76).

¹⁰ Table V, no. 45.

¹² Table V, no. 47.

¹¹ Table V, no. 46.

¹³ Table V, no. 48.

Group VIII-B. *Continuation of the Transitional Type in Italy.*

There is nothing in the Western versions of this type which necessitates an Egyptian origin. It could as well have sprung up in a dozen places where Oriental influence was beginning to transform the Hellenistic models. What it always does presuppose, however, is the presence of

FIG. 76. BERLIN: ANTIQUARIUM, GOLD MEDALLION FROM EGYPT. THE MIRACLE OF CANA.

Eastern influences. Therefore, it is not at all surprising to find it in the Baptistery of Bishop Soter at Naples¹⁴ (Fig. 77) which manifests unquestionable Oriental inspiration,¹⁵ and in the mosaics of Sant' Apollinare Nuovo at Ravenna.¹⁶ The affinities of the Baptistery of Naples are all with Syria; it is interesting, therefore, to note that in its scene of the Miracle of Cana, which is combined with the Samaritan Woman at the Well, there are represented two servants who are, as we shall see, characteristic of the Palestinian-Coptic type.

Group VIII-C. *The Provençal, Carolingian, and Ottonian use of the Alexandrian-Coptic Type.*

In Provence the Transitional or Alexandrian-Coptic type occurs in the fifth century on the ivory fragment in the Berlin Museum¹⁷ (see Fig. 163). In this scene Christ, accompanied by a single disciple, stands between four jars into which a servant is pouring the water. Without attaching undue importance to the observation, it is to be noted (in con-

¹⁶ Table V, no. 50.

¹⁷ Table V, no. 51. The commentary on the miracle by Maximus of Turin (first half of fifth century, *Hom.* 23) shows that the servant was an important feature of his mental image of the scene (cf. Zahn, *Amtl. Ber.*, XXXV, p. 100).

sideration of the fact that, from stylistic reasons, I have suggested that Roman workmen, emigrating from Rome to Provence, carved the Berlin ivory¹⁸) that four jars are found only on two sarcophagi of Rome.¹⁹

FIG. 77. NAPLES: BAPTISTERY, MOSAIC. THE MIRACLE OF CANA (AFTER GARRUCCI; A SECOND SERVANT APPEARS IN THE ORIGINAL MOSAIC).

About 500 the same type, with a few changes, appears on the ivory book covers in Milan cathedral²⁰ (Fig. 78). Christ, accompanied by eight spectators instead of one, is here represented touching with His wand three jars into which a servant is pouring the water. In a way this rendering is even more transitional in character than the regular type seen on the previous ivory; for the figure of Christ with a wand is in the Hellenistic

FIG. 78 MILAN: CATHEDRAL, IVORY BOOK COVERS. THE MIRACLE OF CANA.

manner seen principally on the sarcophagi of the West, the single servant is an Eastern feature added to make the scene less symbolic, and the eight disciples are the effort of the particular artist of the Milan covers to make his composition more narrative. While there is nothing in these compositions to connect the ivories with Provence, it is noteworthy that the num-

¹⁸ See *Berlin Ivory*, p. 246 sq. ¹⁹ Table V, group 4.

²⁰ Table V, no. 52.

ber of jars, three on the Milan covers and usually six on the more literal Eastern monuments, is never more than three in the scenes of the Miracle of Cana on the sarcophagi of Gaul.²¹

As in the case of so many Egyptian types, the Alexandrian-Coptic type was transmitted to Carolingian art where it appears on the book cover in the Bodleian Library at Oxford²² (See Fig. 169). This Carolingian ivory, which is in part a copy of the Berlin ivory and has many iconographic affiliations with Provençal types, presents a scene that is nearly identical with the rendering on the Berlin fragment save for the fact that the jars are increased to six, thereby conforming not only to the Eastern usage but also to the Carolingian scenes of the ninth and tenth centuries. In the subsequent art of the North this type appears on an Anglo-Saxon drinking cup in the British Museum²³ and in the eleventh century in the Missal of Limoges.²⁴

Group IX-A. *Palestinian-Coptic Type with the addition to the composition of the Virgin and with the servants increased to two.*

Besides the characteristic introduction of the Virgin and the addition of another servant pouring water, the Palestinian-Coptic type definitely fixes the number of jars as six and omits the disciple. The introduction of the Virgin, while attributable to Oriental fidelity to the Biblical account,

FIG. 79. FLORENCE: LAURENTIANA, GOSPELS OF RABULA. THE MIRACLE OF CANA.

may also be explained by the early acceptance and development of the cult of the Virgin in Syria. The type appears in Syria among the miniatures of the Rabula Gospels²⁵ of 586 A. D. (Fig. 79) and then appears to have been closely imitated in a fresco of Antinoë in Egypt²⁶ (Fig. 80). Unluckily these are the only two examples of the early Christian period.

²¹ Table V, nos. 7, 10, 21.

²⁴ Table V, no. 55.

²⁵ Table V, no. 56.

²⁶ Table V, no. 57.

Group IX-B. *Continuation of the Palestinian-Coptic Type in the West.*

The Carolingian art of the ninth century in the West derived a large part of its iconography and many of its ornamental motifs from Syria and Egypt. Therefore, it is not at all surprising to find the Virgin added

FIG. 80. ANTINOË: FRESCO. THE MIRACLE OF CANA.

to the scene in the Gospels of Soissons²⁷ (Fig. 81), the Gradual of Prüm,²⁸ a Carolingian coffer in the Sancta Sanctorum²⁹ at Rome, the Codex Egberti³⁰ of the tenth century, and in Italy on an ivory of Palermo.³¹

Group X. *The Byzantine Type with the introduction of the wedding feast.*

This type is primarily the same as the Palestinian-Coptic save for the fact that there is added the wedding feast with the bride, groom, and guests seated around the table while the Saviour, at the suggestion of the Virgin, performs the miracle. When this type originated in the East it is hard to say. On the left hand anterior column of the ciborium of San Marco³² this amplified type occurs in a form suspiciously developed for the date in the sixth century which is regularly given to this column. It was from the second half of the ninth century on, when the veneration of images triumphed in Byzantium, that the historical type became developed and popular on the monuments of the East.

In the ninth century, on the Paliotto of Milan,³³ all the elements of this type appear, although the actual feast is represented by only the governor of the feast who receives the wine from the hand of a servant. By the end of the ninth century and through the eleventh century we have several examples of it on Byzantine ivories³⁴ and in the Greek manuscript

no. 74 in the Bibliothèque Nationale at Paris⁸⁵ (Fig. 82). In the twelfth century it also appears on such Italo-Byzantine monuments as the doors of Benevento,⁸⁶ the ivory panels of Salerno,⁸⁷ and the mosaics of Monreale.⁸⁸

XI

THE HEALING OF THE BLIND

The Gospels tell of three and possibly four occasions when Christ gave sight to the blind. In the artistic renderings of the miracle of the Healing of the Blind it is not only very difficult to tell which one of the events the artists have followed, but it is also only possible to derive from these representations certain general types. The classification is in part based on the local origin of the examples, as the variations in rendering do not justify a segregation into types on the ground of differing details. The Hellenistic type shows a single blind man, small of stature as compared to Christ and frequently carrying a staff; the Saviour either touches him on the eyes or lays a hand on his head. The Oriental-Hellenistic division is a continuation of this same type on Eastern monuments, although on some of the examples Christ raises his hand instead of touching the blind man. The Alexandrian-Coptic is again a continuation of the earlier type with the addition of the Coptic cross which Christ usually carries in miracle scenes. The Syrian type is more distinct in showing two blind

⁸⁵ Table V, no. 69.

⁸⁷ Table V, no. 72.

⁸⁶ Table V, no. 71.

⁸⁸ Table V, no. 73.

men approaching Christ instead of one. It is into this group that the scene on the Milan ivory falls. The Byzantine type is the most historical, for it represents the blind man, after Christ has put clay upon his eyes, washing in the well of Siloam.

While the Gospels speak of four miracles of the kind, they give the artistic details for only two distinct scenes. Matthew writes that when Christ was departing from the house of Jairus¹ two blind men followed Him and that on leaving Jericho² He met two blind men seated by the side of the road; in both cases after He had touched their eyes they were healed.

FIG. 82. PARIS: BIBL. NAT., MS. GR. 74.
THE MIRACLE OF CANA.

Mark writes that Christ on His way to Jericho, when the blind man Bartimeus who sat begging by the side of the road asked for mercy, told him that his faith had made him whole.³ Unlike the other miracles it is related in the Gospel of John⁴ that Jesus, meeting the man born blind, rubbed clay upon his eyes and sent him to wash them in the pool at Siloam.

The *Hellenistic* type, where Christ usually touches the eyes of the blind, who is small of stature, appears to be a symbolic rendering of the last named miracle⁵ which in the Byzantine type is depicted in a more narrative manner. This miracle is the only one wherein Christ touches the eyes of a single blind man and its dependence on the account in John is shown by a sarcophagus described by Bottari⁶ where two miracles of the healing of the blind are figured, the one at the left showing Christ laying His hand on the head of a blind man who sits by the wayside and another scene which depicts Him touching with His fingers the eyes of a small figure in front of Him. If the touching of the eyes represents the

⁶ Bottari, *Sculture e pitture*, I, pl. XXXII.

healing of the man born blind, the other scene on the sarcophagus must then depict the healing of Bartimeus who sat begging at the side of the road until Jesus called to him.

The symbolic nature, however, of all the Hellenistic types makes it uncertain in the case of this miracle which one of the Gospel accounts was being followed. The symbolic and didactic meaning of the episode was suggested and partly developed by the Evangelist John in his account of the miracle. As early as the second century St. Irenaeus⁷ expounded the relationship between the restitution of the light of the world and the

FIG. 83. ROME: SARCOPHAGUS. CHRIST HEALING THE BLIND.

resurrection of the flesh by the introduction into it of the light of heaven, and this relationship was restated by the theologians of the succeeding centuries.⁸

The Hellenistic type appears in the West as early as the beginning of the third century in a fresco of the catacomb of Domitilla where Christ is represented touching with His fingers the eyes of a blind man who kneels

⁷ Leclercq, *op. cit.*, col. 3230; Irenaeus, *Adv. haeres.* P. G. t. VII, col. 1163.

⁸ Leclercq, *op. cit.*

before Him. The regular rendering of the type on the Western sarcophagi⁹ shows Christ touching the eyes of a blind man of small stature (Fig. 83), but in all the catacomb representations, with the exception of one in Domitilla,¹¹ and on a few sarcophagi¹² Christ lays His hand on the blind man's head. On twelve sarcophagi¹³ the blind man carries a staff, a detail more characteristic of the later scenes of Eastern origin than of the Hellenistic type.

Group II, the *Oriental-Hellenistic* division of the Hellenistic type, includes those monuments of Eastern origin on which the Hellenistic type occurs. While this type was uniformly maintained in the West for the first five centuries of Christian art, and for that reason might be called Western, it probably originated at the end of the second century in the

FIG. 84. RAVENNA: IVORY PANEL OF CHAIR OF MAXIMIANUS. CHRIST HEALING THE BLIND.

East and thence spread through the whole Hellenistic world. With its presumably Oriental origin in mind it is not surprising either to find this type on Hellenistic monuments of Eastern inspiration, like the Brescia casket,¹⁴ the doors of Santa Sabina,¹⁵ the ciborium columns of San Marco,¹⁶ the Alexandrian pyxis at Bologna,¹⁷ and the gold encolpium at

Constantinople;¹⁸ or to find it the characteristic composition of the Alexandrian-Coptic group.

Group III, the *Alexandrian-Coptic* group, is also a continuation of the Hellenistic type with the added feature of the Coptic cross which Christ carries in the miracle. This Coptic variation of the type appears on the ivory chair of Maximianus¹⁹ (Fig. 84), the ivory book cover in the Bibliothèque Nationale at Paris,²⁰ the Murano cover²¹ (Fig. 85), and the

FIG. 85. RAVENNA: MUSEUM, IVORY BOOK COVER FROM MURANO. CHRIST HEALING THE BLIND.

Coptic pyxides in the Vatican Museum,²² at Pesaro,²³ in the Cluny Museum²⁴ and the Micheli Collection²⁵ at Paris. The regular Hellenistic type without the cross occurs on three other Coptic ivories, two in Paris²⁶ and one in the Sancta Sanctorum at Rome.²⁷

Group IV, the *Syrian* type, represents two blind men seeking the mercy of Christ. This type, which follows the account in Matthew, occurs in the Rabula Gospels²⁸ from Zagba in Mesopotamia. The Gospels also depict a scene (Fig. 86) of the Healing of the Blind and the Halt which recalls the rendering on the chair of Maximianus. Curiously enough the

type also appears in the sixth century in the Fragment of Matthew from Sinope in Asia Minor²⁹ (Fig. 87) which from its relationship with the Rossano Gospels belongs to a proto-Byzantine group of Asia Minor, and in the ninth century in the Byzantine manuscript no. 510³⁰ in the Bibliothèque Nationale at Paris. I have called the type Syrian because it occurs in the Rabula Gospels and it may have been Syrian influence which carried

FIG. 87. PARIS: BIBL. NAT., MS. FRAGMENT FROM SINOPE. CHRIST HEALING THE BLIND.

it to Sant' Apollinare Nuovo.³¹ It made its way into Asia Minor, since we find it in the fragment from Sinope, and even into the early Byzantine

²⁹ Table VI, no. 69.

³⁰ Table VI, no. 70.

³¹ Table VI, no. 74. Cf. for a recent statement of the evidence for Syrian influence on Ravennate art, Strzygowski, *Oriens Christ.*, V, 1915, p. 83.

art represented by Ms. gr. 510 in the Bibliothèque Nationale. But this same Greek manuscript contains the other version of the scene which was already present in the Rossano Gospels (see p. 101), an Asia Minor manuscript whose iconography is persistently Byzantine, and it was this second form which prevailed in subsequent Byzantine art, supplanting the sporadic Syrian version, and common enough to justify its title as the Byzantine type.

Whether the Syrian type originated in Asia Minor or Syria, it was certainly Eastern. Therefore, its appearance on a sarcophagus in Rome⁸² and in the mosaics of Sant' Apollinare Nuovo at Ravenna is indicative of the introduction into the West during the fifth and sixth centuries of Oriental motifs.

The scene on the Milan book cover⁸³ represents Christ, accompanied by a disciple, raising His hand in blessing toward the small figure of a

FIG. 88. MILAN: CATHEDRAL, IVORY BOOK COVERS. CHRIST HEALING THE BLIND.

blind man who comes forward leaning on a stick, while a second blind man emerges from an aedicula in the background (Fig. 88). At the outset, this scene with two blind men associates itself with the Eastern type of either Asia Minor or Syria. This form appeared on the walls of Sant' Apollinare Nuovo shortly after the time that the ivory was carved; it seems likely that the type had been introduced directly from the Orient into Provence as it had been brought from the East to Ravenna by

⁸² Table VI, no. 72.

⁸³ Table VI, no. 73.

Oriental workmen. While the direct relation of the scene on the Milan ivory to any particular centre must remain problematic, the type was Eastern and goes to confirm the curious eclectic character of the scenes on the book covers.

Group V, the *Byzantine* type, as it appears in the Codex Rossanensis⁸⁴ (Fig. 89), shows Christ, accompanied by two disciples, touching the eyes of a single blind man who bends before Him; to the right is the pool of Siloam where the blind man washes the spittle from his eyes while a large

FIG. 89. ROSSANO: GOSPELS. CHRIST HEALING THE BLIND.

crowd of astonished people watch the restoration of his sight. This type was followed in the ninth century in the Byzantine manuscript no. 510 at Paris⁸⁵ (Fig. 90), in the eleventh century in the Byzantine mosaics of San Marco,⁸⁶ and passed in the tenth century from Constantinople to Ottonian art⁸⁷; in the following century it was used in the eclectic frescoes of Sant' Angelo in Formis.⁸⁸ It represents a typical Byzantine rendering of the Biblical account, the source in this case being the Gospel of John. The dependence on the account in John was most natural, for in Asia Minor, where the type first occurred in the sixth century in the Codex Rossanensis, the centre of religious inspiration was the church of Ephesus, founded by the Evangelist John and built upon his teachings.

THE HEALING OF THE PARALYTIC

The Gospels refer to two different occasions when Jesus restored the use of his limbs to a man sick of the palsy: once at Capernaum (Mark ii, 1-12; Luke v, 18-26), and another time at the pool of Bethesda (John v, 1-15); in each case Jesus said to the afflicted man, "Take up thy bed and walk." As it was the artistic tradition from the second to the ninth century to picture only the last act of the miracle, it is impossible to tell

FIG. 90. PARIS: BIBL. NAT., MS. GR. 510.
CHRIST HEALING THE BLIND.

which of the two events is being depicted. It is also difficult to differentiate the representations of the various schools, as the artists of both the East and the West persistently show the paralytic departing, at Christ's command, with the bed on his shoulders.

In a general way the following types appear in the representations: the Hellenistic type of simple, symbolic character where the paralytic is usually represented in profile and Christ is not always figured in the scene; an Oriental-Hellenistic group that is a direct continuation in late sixth century Eastern art of the early catacomb and sarcophagus type; two Coptic variations of the Hellenistic type; and a developed and historical Byzantine type which portrays Christ and the disciples approaching a house where men lower the bed-ridden paralytic through the roof. From the monuments on which they occur the two Coptic renderings may be designated as the Alexandrian-Coptic, where the paralytic, carrying his bed in profile, looks back at the Saviour who holds in His hand the Coptic

cross, and the "Palestinian-Coptic," wherein the paralytic is depicted in more or less frontality holding his bed with only the front end showing, and the Saviour carries a cross.

HELLENISTIC TYPE.

Like all the types of this class, the Hellenistic version of the Healing of the Paralytic was highly symbolic. As a scene of deliverance it symbolized the Baptism, for a cleansing from sin, which was the significance of the Baptism, was included in the physical restoration of the paralytic.¹ This dogmatic connection with the Baptism, which Tertullian² plainly asserted, Wilpert has detected in the frescoes of the catacombs wherein the scene of the paralytic is combined with other symbols and with the actual representations of the Baptism.³

The *Hellenistic* type appears as early as the second century in the Roman catacomb of Priscilla.⁴ In all the catacomb frescoes (Fig. 91) down to the fifth century the paralytic is usually depicted⁵ carrying

FIG. 91. ROME: CATACOMB OF CALLIXTUS, FRESKO. HEALING OF THE PARALYTIC.

his bed upside down on his shoulders and with two exceptions Christ is omitted. On the "Roman glass,"⁶ dating from the third to the fifth century, the scene is similar to that of the frescoes and Christ is only once introduced into the composition.⁷ On the Western sarcophagi⁸ a more consistent type is preserved; the paralytic is always small of stature, and stands in profile at the feet of Christ holding his bed with the legs hanging

FIG. 92. ROME: SARCOPHAGUS.
HEALING OF THE PARALYTIC.

down his back (Fig. 92). There are three exceptions to this rule in which he holds the bed endwise on the ground before him.⁹

The scene on the Milan book covers¹⁰ is of the Hellenistic type (Fig. 93). The paralytic, facing Christ and a disciple, stands holding his bed upside down on his shoulders. The presence of this form of the scene in Provence confirms the eclectic character of these ivories, which were done under the combined influence of the Hellenistic art of the West emanating from Rome and the Eastern influences introduced by Syrians and other Orientals.

THE EAST.

With the exception of the Byzantine type the Eastern representations are simply a continuation, with certain not too well defined variations, of the Hellenistic form.

The *Oriental-Hellenistic* group represents a continuation in Oriental art of the Hellenistic method of depicting the miracle. The fact that one of its examples came from Syria and another presumably from Alexandria confirms the general character of the Hellenistic types and indicates an Eastern origin. The scene in the Rabula Gospels¹¹ reverts to the catacomb method of depicting the paralytic carrying his bed upside down on his shoulders. On a pyxis of Bologna¹² is a representation which is similar

⁹ Table VII, nos. 27, 32, 46. ¹⁰ Table VII, no. 47.

¹¹ Table VII, no. 48.

¹² Table VII, no. 49.

to the scenes on the sarcophagi; save that the paralytic is as large as Christ. This pyxis, from its similarity to the fine Alexandrian pyxis in the Berlin Museum¹³ and to an Alexandrian bone carving in the same museum, is ascribed to Alexandria.¹⁴ Much the same representation also occurs on a pyxis from Darmstadt.¹⁵ This continuation of the Hellenistic type ap-

FIG. 93. MILAN: CATHEDRAL, IVORY BOOK COVERS. HEALING OF THE PARALYTIC.

pears on the ciborium columns at San Marco,¹⁶ in one of the mosaics of Sant' Apollinare Nuovo,¹⁷ and on an encolpium of the sixth or seventh century at Constantinople.¹⁸

The *Alexandrian-Coptic* group represents the paralytic holding tight against his body the two front legs of the bed, of which only the front end shows, and looking back at the Saviour. This manner of depicting the scene occurs on the Etschmiadzin book cover,¹⁹ an ivory book cover in the Bibliothèque Nationale at Paris²⁰ (Fig. 94) and an ivory in the Micheli Collection at Paris,²¹ all of which follow the iconography of the Maximianus chair and in other scenes fall into the Alexandrian-Coptic group.

The scene on the Carolingian book cover in the Bodleian Library at Oxford (see Fig. 169), instead of following the iconography of the Milan book covers as in many other scenes, preserves in this case the rendering of the Alexandrian-Coptic monuments.²² It depicts the paralytic holding his bed in a frontal position. In the scene of the Miracle of Cana²³ this

ivory also followed the Alexandrian-Coptic type and in the representation of Christ trampling on the four beasts the Bodleian cover, as we shall see later, presents a type which was transmitted into Carolingian art from Alexandria²⁴; it is not surprising therefore to find here an Egyptian version of the Healing of the Paralytic.

The Coptic type wherein the paralytic is represented in profile look-

FIG. 94. PARIS: BIBL. NAT., IVORY BOOK COVER. HEALING OF THE PARALYTIC.

ing back at Christ, who carries in His hand the Coptic cross, occurs on the Murano book cover at Ravenna²⁵ (Fig. 95) and on four pyxides in the Youlgrave,²⁶ Vatican,²⁷ Cluny,²⁸ and Basilewsky²⁹ collections. In the case of this group it is true that there are no examples to show a Palestinian origin or continuation of the type, and yet on the table I have characterized the type, for consistency, as *Palestinian-Coptic*. This distinguishes the type from the Alexandrian-Coptic, and is consistent with the general trend of the iconography of the monuments on which this variant occurs, for the Murano cover, and the group it represents, show in other scenes the influence of Palestinian iconography.

The *Byzantine* group presents the amplified or historical composition in which the paralytic on his bed is lowered through the roof of a house. There is no doubt that in this group it is the miracle of Capernaum, as related in Mark and Luke, that the artists are depicting, for at the pool of Bethesda there is no mention of a house in the account of John.

²⁹ Table VII, no. 63.

FIG. 95. RAVENNA: MUSEUM, IVORY BOOK COVER FROM MURANO. HEALING OF THE PARALYTIC.

Curiously enough there are two representations of the Healing of the Paralytic among the mosaics of Sant' Apollinare Nuovo, of which one is Hellenistic and the other is the earliest example of this amplified rendering.⁸⁰ Judging from most of the Byzantine types, this form of the scene must have originated in some proto-Byzantine monuments like the Rossano Gospels and have first been formulated in Asia Minor. This assumption

FIG. 96. ROME: S. SABA, FRESCO. HEALING OF THE PARALYTIC.

is borne out by the appearance of the type in the eighth century in the very Byzantine frescoes of the basilica of S. Saba on the Aventine⁸¹ (Fig. 96).

In the ninth century this form appears in the miniatures of the Homilies

⁸⁰ Table VII, no. 64.

⁸¹ Table VII, no. 65.

of Gregory of Nazianzus (Bibl. Nat., gr. 510, Paris).³² The eleventh century example in the Greek Gospels no. 74, Bibliothèque Nationale³³ (Fig. 97), shows essentially the same type, although more stylized and narrative in the rendering. As in the case of other Byzantine types, it passed into

FIG. 97. PARIS: BIBL. NAT., MS. GR. 74.
HEALING OF THE PARALYTIC.

Ottonian art where it occurs among the manuscript illuminations³⁴ and in later centuries became the usual composition employed in Italo-Byzantine art.

XIII

THE RAISING OF LAZARUS

The Raising of Lazarus, from its intimate relation with the Christian hope of spiritual salvation in the life hereafter, was from the earliest days of Christian art the most popular and frequently represented of Christ's miracles. Inasmuch as the methods of figuring the scene in the various art centres of the Mediterranean world were, with the exception of the Byzantine type, based on a general Hellenistic form and differed only in details, the examples divide more into groups than into types. The groups or types, whichever they may be, are the Hellenistic, the Oriental-Hellenistic, the Alexandrian-Coptic, the "Coptic," and the Byzantine. The Hellenistic type, appearing on Western monuments, sub-divides into five variants of the general type. With exceptions in the first and fifth variants, the uniform characteristics of the Hellenistic type show Christ touching with His wand the figure of Lazarus who, wrapped like a mummy with his head covered with a cloth, stands in the doorway of a little gabled aedicula set upon a podium. The sub-groups are charac-

³² Table VII, no. 66.

³³ Table VII, no. 68.

³⁴ Table VII, no. 67.

terized as follows: In Group I, composed of the earliest examples of the scene, Lazarus sometimes lies on the steps of the aedicula and is seldom represented as a mummy; Group II presents only the uniform characteristics of the Hellenistic type as a whole; in Group III one of the sisters of Lazarus, kneeling at the feet of Christ, is added to the composition; Group IV introduces the second sister standing at the side of the Saviour; Group V is a unique and highly symbolic type appearing only on the "Roman glass," where Lazarus, wrapped like a mummy with his *head bare*, leans against a kind of foliate growth. The Oriental-Hellenistic group, composed of Eastern examples of the foregoing type, shows in its principal minor division a Syro-Anatolian rendering wherein the tomb is represented in frontality as an arch supported on two columns. The Alexandrian-Coptic continues the Hellenistic type with the gabled aedicula in which Lazarus stands as a mummy with his head covered, but on the Coptic monuments Christ carries a cross instead of the traditional wand. A later Coptic group depicts the tomb in strict frontality with a façade which has a kind of mansard roof, Lazarus with his *head bare*, and Christ carrying the Coptic cross. The developed Byzantine type shows, with certain variations, Christ, followed by disciples and spectators and with Mary and Martha lying prostrate at His feet, commanding Lazarus to come forth from the sepulchre or rock hewn tomb; servants are represented either holding back the entrance slab of the tomb or unwinding the swathed Lazarus, and they often hold their noses at the stench arising from the sepulchre.

THE HELLENISTIC TYPE

That the local methods of representing the scene throughout the Mediterranean, with the exception of the proto-Byzantine in Asia Minor, vary from a general type only in slight details may perhaps be explained by the highly developed and universally accepted symbolical character of the scene and the fact that only the Evangelist John relates the event.¹ Typifying the resurrection of the body, it stood in the Christian mind as the guarantee of immortality.

The Hellenistic manner of representation, appearing first in the catacombs of the West, must have begun as a memory picture brought to Rome from the Hellenistic centres of the Orient by those Eastern Chris-

¹ John, xi.

tians who first spread the new faith in the cities along the shores of the Mediterranean.² In accordance with the usage of the Jews, who adopted embalming from the Egyptians, and also with the account of John (xi, 44) the Western artists figured Lazarus as a little mummy "bound hand and foot with grave clothes; and his *head bound about* by a napkin." Quite the opposite result took place in regard to the sepulchre; while the customary burial of Judea was in rock hewn tombs and the words of the Evangelist say that "it was a cave, and a stone lay upon it," nearly all the representations of the first six centuries, either from the technical difficulties of depicting a cave or, as is more likely, from the influence of the temple tomb widely used in Hellenistic times, represent the sepulchre in the form of an aedícula.

Group I, in the Hellenistic division, includes the early second century frescoes in the Roman catacombs³ and two pieces of decorated glass.⁴ The iconography of the scene on these examples is unsettled and appears to antedate the establishment of any type. The Raising of Lazarus in the catacomb of Priscilla, which dates in the first half of the second century,⁵ is unique in treatment. In the doorway of a regular gabled aedícula Lazarus, swathed in grave clothes like a mummy, lies diagonally across the door. At a little distance from the tomb stand two figures, one of whom is undoubtedly a woman. Wilpert says that in this first representation of the scene Christ is not figured at all but that the male person is the resurrected Lazarus. His reason for refusing to identify the man with Christ is the familiar gesture of the woman who lays her hand upon his shoulder. This attitude seems to indicate the personages as Lazarus and his sister. Another reason given by Wilpert for interpreting the figure as Lazarus is his white raiment and the fact that he holds his arms crossed over his breast and looks back at the aedícula "mit grossen Augen."⁶ The double representation of Lazarus is consistent with the date. In a badly damaged fresco of the second century in Praetextatus appears the lower half of two figures standing before a tomb, who are usually interpreted to be Christ and one of the sisters of Lazarus.⁷ In two frescoes in Callix-

⁷ Lamberton, *op. cit.*, p. 28, note 33.

tus (Fig. 98), a fresco in the Lateran Museum, and on a glass dish from Podgoritza, Lazarus is not depicted as a mummy. A less curious example occurs on a piece of "Roman glass," included in the same group, where Lazarus, wrapped like a mummy, lies on the steps of the aedicula.

Group II, which represents the simplest and most characteristic rendering of the Hellenistic type, shows Christ, clothed in classical garb, touching with His hand the mummylike figure of Lazarus, who stands with his head veiled in a napkin in the door of an aedicula resembling a Roman

FIG. 98. ROME: CATACOMB OF CALLIXTUS, FRESKO. THE RAISING OF LAZARUS.

temple.⁸ The aedicula, set upon a podium, is approached by a flight of steps leading up to the entrance which is usually flanked by two Corinthian columns. While Christ generally touches Lazarus with His wand, the wand is sometimes omitted and the Saviour simply raises His hand in an attitude of command.⁹ The rendering of Group II occurs in the third century catacomb frescoes seven times and in those of the fourth century forty-one times. It also appears on sarcophagi of Arles¹⁰ and Rome.¹¹

Group III in the Hellenistic division is peculiar to the sarcophagi of

⁸ Table VIII, nos. 8-65; the table gives only the characteristic examples as all the others are the same. Of the third century frescoes there are seven examples (Wilpert, *Le Pitture*, pls. 55, 45/1, 65/2, 71/1, 93, 108/2, and De Rossi, *Bull.*, 1873, pl. 1). In the fourth century frescoes there are forty examples which are listed by Lamberton, *op. cit.*, p. 105, note 142.

⁹ Table VIII, no. 61; Wilpert, *Le Pitture*, pl. 228/4.

¹⁰ Table VIII, nos. 59-60.

¹¹ Table VIII, nos. 62-64. Two other scenes on the sarcophagi are often listed as Resurrections of Lazarus. That these scenes do not depict the resurrection, but represent other miracles, is shown by a sarcophagus in the Lateran Museum at Rome (Garr., *op. cit.*, V, pl. 367/1) where all three scenes are carved on the same face of the sarcophagus. The scenes on this sarcophagus are divided into two rows; in the left hand corner of the upper row Christ is represented touching with His wand the figure of Lazarus who stands, wrapped like a mummy, in the doorway of an aedicula. In the same row appears the miracle of the Raising of the Son of the Widow of Nain

the West¹² and the *Milan book covers*¹³ (Fig. 99). Here one of the sisters of Lazarus, kneeling at the feet of Christ, is introduced into the composi-

FIG. 99. MILAN: CATHEDRAL, IVORY BOOK COVERS. THE RAISING OF LAZARUS.

tion. The account in the Gospel of John (xi, 32) reads, "Then when Mary was come where Jesus was, and saw him, she fell down at his feet, saying unto him, Lord, if thou hadst been here, my brother had not died." It is to be presumed, then, that the prostrate figure represents the sorrowing Mary. This single figure does not appear on Eastern examples but characterizes the scene on most of the Roman sarcophagi and on several of Gaul.

The appearance of this scene on the ivory book covers of Milan is important, for the same rendering of the scene is found on several sarcophagi of southern Gaul¹⁴ (Fig. 100). All the features of the scene are identical with those on the Provençal sarcophagi, even to the single disciple

wherein Christ, by the miraculous touch of His wand, brings into a sitting position *a little mummy that lies at His feet*. In the right hand corner of the lower row occurs the Raising of the Daughter of Jairus, a scene where Christ places His hand on the head of a little girlish figure who is *seated on a bed* behind which stand two figures watching the miracle. This last scene of the Raising of Jairus's Daughter usually has the figure of the mother kneeling at the feet of Christ as is seen on another sarcophagus in the Lateran (Garr., pl. 376/4); in this representation the bed with the dolphins on the head piece exactly duplicates the bed on the other sarcophagus and is the regular type of the bed in this scene on all the examples. Another scene of the resurrection of the dead is the Awakening of Tabitha by Peter which is depicted on a sarcophagus of Arles (Garr., pl. 400/8) and on a sarcophagus of St. Maximin (Garr., pl. 353/2).

¹² Table VIII, Group 3. The same type also occurs on the fifth century (?) silver casket of Brivio, now in the Louvre (Lauer, *Mon. Piot*, 1906, XIII, pl. XIX). Unlike the scene on any of the sarcophagi, Christ on the casket wears a nimbus and the tomb, while it has a lintel, is surmounted by a semi-circular pediment.

¹³ Table VIII, no. 92.

¹⁴ Table VIII, nos. 66, 67, 71, 89, 90.

who follows Christ as a witness of the miracle. This occurrence of the same scene on the Gallic sarcophagi sustains the connection of the covers with Provence and it is obvious that the use on the ivory of the distinctively Western method in depicting the scene precludes an Oriental origin.

Group IV, wherein Martha stands at the side of the Saviour, contains

FIG. 100. AIX: SARCOPHAGUS. THE RAISING OF LAZARUS.

very few examples (Fig. 101). From the statement in the Gospels which says that Martha when she heard that Jesus was coming "went and met him," this standing figure may be interpreted to represent the older sister of Lazarus. The assumption is in part borne out by the fact that the standing figure, which I would interpret as Martha, occurs on four sarcophagi whereon the kneeling figure of Mary is also represented. Two of these sarcophagi are at Rome,¹⁵ one is in Arles,¹⁶ and the other from Auch.¹⁷ The standing figure of Martha appears also on a sarcophagus of Clermont-Ferrand¹⁸ and on an ivory pyxis of Darmstadt,¹⁹ where in a suspiciously curious scene Lazarus, dressed in a tunic, kneels in the open doorway of a tomb with a conch roof.

Group V presents an odd method of representing the scene on the so-called "Roman glass."²⁰ Instead of being depicted in an aedicula, Lazarus on these bits of glass is shown wrapped like a mummy and with his *head bare*, leaning against a kind of foliate growth whose calligraphic scrolls, arranged in a row symmetrically on either side, appear to frame his body. Christ, like a magician, touches his body with a conjuror's wand (see

¹⁵ Table VIII, nos. 97-98.

¹⁷ Table VIII, no. 96.

¹⁹ Table VIII, no. 94.

¹⁶ Table VIII, no. 95.

¹⁸ Table VIII, no. 93.

²⁰ Table VIII, Group 5.

Fig. 74). We cannot say whether or not this was an early manner of representing the scene before any type had been established, for the date and even the provenience of the "Roman glass" are matters of speculation. ✓ The feature of Lazarus with his head bare, which is in direct contradiction of the Gospel account and the accepted method of depicting him, will appear later on a group of Coptic ivories and on the Brescia casket. The

FIG. 101. ROME: SARCOPHAGUS. THE RAISING OF LAZARUS.

casket is supposed by Strzygowski to have come from Asia Minor and the Coptic ivories represent the native Egyptian method, seen on the Fayum portrait mummies, of painting or carving an uncovered head of the deceased on the top of the mummy. In view of this it may be possible that the Roman glass was imported from an Eastern centre.

THE EAST

The *Oriental-Hellenistic* group does not represent any new type, but only includes under three heads the variations of the Hellenistic method of representing the Raising of Lazarus occurring on monuments of unquestionably Oriental origin. The Hellenistic types of the early Christian scenes, as I have already said, must many of them have come from Hellenistic centres of the East. It is, therefore, not surprising to find the early types continued on the later monuments of the East. The Alexandrian origin, which Ainaloff suggests²¹ for the Hellenistic rendering of the scene, is confirmed by the appearance of the catacomb form on a monument which in other scenes shows Alexandrian-Coptic iconography, namely, the Bologna ivory.

²¹ Ainaloff, *op. cit.*

Group VI in the Hellenistic-Oriental division includes a single monument, the Brescia casket,²² which dates from the fifth century and which Strzygowski has attributed to Asia Minor.²³ The only unique feature is the *bare head* of Lazarus. Otherwise the scene is the same as the regular catacomb type.

In Group VII of this same class, which can be broadly assigned to the *Syro-Anatolian* region, we find, instead of the regular gabled aedicula seen in the frescoes and on sarcophagi, a tomb of which only the façade, which is an arch supported on two columns, is represented in strict frontality. This type of tomb first occurs on a relief recently discovered in Phrygia (Fig. 102) and dated by Ebersolt in the fourth century.²⁴ The same type also appears on two sarcophagi²⁵ of S. Vitale at Ravenna which Dütschke dates in the fourth century (Fig. 103). It is to be noted

FIG. 102. CONSTANTINOPLE: IMP. OTTOMAN MUSEUM, RELIEF FROM PHRYGIA. THE RAISING OF LAZARUS.

that the tomb of Lazarus on these three examples resembles the end of the sarcophagi with semi-cylindrical covers at Ravenna.

Although the Phrygian relief would suggest that the tomb of Lazarus with a round arched entrance was primarily an Asia Minor method of representing the scene, the fact remains that it was in northern Syria rather than in Asia Minor that the arched entrance was frequently used for the façades of tombs and sepulchres. In many places of northern Syria there are remains of Christian tombs which are either actually barrel vaulted²⁶ or have barrel vaulted porticoes entered by arched doorways,²⁷

²² Table VIII, no. 106.

while the use of the arch is one of the noticeable features of the Christian architecture. The arch and the barrel vault, if not so common in the free standing tombs of Anatolia, were constantly employed in the general architecture of the country²⁸ and in Phrygia there have been found many reliefs²⁹ which show the arcuated façade rendered frontally in much the same manner as in the scene of the Raising of Lazarus on the Phrygian

FIG. 103. RAVENNA: S. VITALE, SARCOPHAGUS OF THE EXARCH ISAAC. THE RAISING OF LAZARUS.

relief. The type of tomb, then, on the Anatolian relief and the two Ravenna sarcophagi, while it seems to be an attempt to picture the façade of the free standing Christian tomb of northern Syria with its arcuated entrance, can not surely be connected with any definite region of the East. The Eastern decorative elements on so many sarcophagi of Ravenna and Provence which have the barrel cover instead of the gabled lid, and the generally admitted relations of these centres with the East, sustain the connection of this type with the general region of Syro-Anatolia. The connection with the East is borne out by some fragments of a white marble vase found at Sbeitla (Tunisie). The Raising of Lazarus on one of these fragments is practically identical with that of the Phrygian relief above mentioned. Both reliefs belong to a class of objects evidently designed for liturgical use, examples of which have been found in Bulgaria, Greece, Egypt, and Cyprus. Their community of style, ornament, and

²⁸ Ramsay and Bell, *Thousand and One Churches*, p. 435 sq.

²⁹ Ramsay, *The History and Art of the Eastern Provinces*, figs. 6-c, 20, 21, 22-a, 22-b, 29, 31, 34.

iconography shows that all came from the same manufactory, and from the fact that they have been found mostly in the East, and from other indications, it is now held that they are of Oriental origin.⁸⁰

Group VIII of the Oriental-Hellenistic examples includes only the encolpium in the Museum of Constantinople⁸¹ wherein Christ, wearing a nimbus, is represented touching with His wand the figure of Lazarus who, wrapped like a mummy and with his head covered by a napkin, stands in the entrance of a tomb which looks like a miniature apse.

Another Oriental-Hellenistic example of the scene occurs on a relief at Constantinople,⁸² which is dated as late as the beginning of the seventh century. Here the swathed Lazarus with his head covered is represented standing in strict frontality in the entrance of a gabled (?) façade. The custom of representing either buildings or figures in a restricted frontality was an Oriental characteristic in direct contrast to the freer Hellenistic method of depicting them in perspective. Thus in the case of this relief as in that of the examples of Group VII of the Oriental-Hellenistic

FIG. 104. PARIS: BIBL. NAT., IVORY BOOK COVERS. THE RAISING OF LAZARUS.

division, the Eastern feature in what would otherwise be a regular Hellenistic rendering is the frontality of Lazarus and the tomb.

Group IX, the *Alexandrian-Coptic*, starts as usual with the purely Hellenistic form of the scene. It changes in the later Coptic examples, as the indigenous characteristics of Coptic art affect it, only to the extent

⁸⁰ Merlin in *Bulletin archéologique*, 1913, p. clxxix, sq., pl. 46. This group of objects has been given detailed treatment by Michon, *Bull. des antiquaires de France*, 1908, p. 268 sq.

⁸¹ Table VIII, no. 111.

⁸² Muñoz, *Nuovo Bull. di arch. crist.*, XII, 1906, p. 113, fig. 2.

that Christ carries the Coptic cross and the tomb becomes a nondescript sepulchre rendered in frontality. The first example occurs on the Alexandrian pyxis at Bologna.⁸³ On the ivory book covers in the Bibliothèque Nationale at Paris,⁸⁴ which in iconography, as well as style, follow the Maximianus chair into the Alexandrian-Coptic group, essentially the same scene appears. While obviously derived from the Hellenistic form, it at the same time shows Christ with a cross and the gabled tomb façade depicted frontally (Fig. 104). In this last feature the scene is transitional to the Coptic type, as we find to be the case regarding later members of the Alexandrian-Coptic group in other scenes. Aside from the fact that

FIG. 105. CAIRO: MUSEUM, IVORY COMB FROM ANTINOË. THE RAISING OF LAZARUS.

FIG. 106. PARIS: CLUNY MUSEUM, IVORY PYXIS. THE RAISING OF LAZARUS.

the tomb has changed to a simple sepulchre of no particular character and represented frontally, the scenes on the Coptic pyxis at Bonn⁸⁵ and the odd ivory in the Micheli Collection at Paris⁸⁶ are the same as the scene on the covers.

Group X, a *Coptic* type, is distinguished by Lazarus, his head bare, standing in the entrance of a frontal tomb façade with a broken lintel and by Christ carrying a cross instead of a wand. On a sixth century ivory comb⁸⁷ from the excavations at Antinoë (Fig. 105), the tomb, of which only the façade is represented, is shown as two spiral fluted columns bearing a broken, denticulated lintel, which gives the impression that the tomb had a mansard roof; within the doorway stands the swathed figure of Lazarus, his head bare, and with curly wiglike hair; to the right of the tomb is Christ with the same wiglike hair, carrying a cross in His right

⁸³ Table VIII, no. 112.

⁸⁴ Table VIII, no. 113.

⁸⁵ Table VIII, no. 114.

⁸⁶ Table VIII, no. 115.

⁸⁷ Table VIII, no. 117.

hand and a roll in His left. Four other Coptic ivories are connected in type with this comb through their striking similarity in nearly every detail of the composition; a pyxis in the Cluny Museum at Paris³⁸ (Fig. 106), a pyxis in the Basilewsky Collection at Petrograd³⁹ (Fig. 107), a pyxis in

FIG. 107. PETROGRAD: BASILEWSKY COLLECTION, IVORY PYXIS. THE RAISING OF LAZARUS.

the Vatican⁴⁰ (Fig. 108), and the Murano book cover at Ravenna⁴¹ (Fig. 109). On all these examples is the same odd shaped tomb, Lazarus with his head bare, and both Christ and Lazarus with the same curly wiglike hair and drill holes for eyes; with the exception of the Basilewsky pyxis, where Christ carries only a roll, He is given the cross as the symbol of power. The similarity of the scene on the Cluny pyxis and the Antinoë comb is so close that even the wrappings of Lazarus make the same conventional design. There occurs on a Coptic textile from Akmim⁴² a representation in which Lazarus is also depicted with his head bare but the tomb and Christ are not characterized, and Lazarus oddly enough appears to wear a nimbus. Thus we have a clear-cut type of the Raising of Lazarus in Egypt, which is to be characterized by the mansard roofed aedicula, Lazarus with his head bare, the cross in Christ's hand, the drill holes in the eyes, and the curly, wiglike hair.

Besides the absolute uniformity of the scene on these admittedly Coptic ivories, the feature of Lazarus with his head bare and his hair short and

³⁸ Table VIII, no. 120.

⁴⁰ Table VIII, no. 121.

⁴¹ Table VIII, no. 118.

⁴² Table VIII, no. 122.

curly may be associated most definitely with Egypt through the Fayum mummy portraits. While the custom throughout the history of Egypt was to depict the uncovered head of the deceased at the top of the mummy case, during the late Roman occupation of the country it became the cus-

FIG. 108. ROME: VATICAN, IVORY PYXIS. THE RAISING OF LAZARUS.

FIG. 109. RAVENNA: MUSEUM, IVORY BOOK COVER FROM MURANO. THE RAISING OF LAZARUS.

tom to paint a portrait head with short curly hair on the face of the mummy cloths.⁴³ The resemblance of Lazarus on the ivories, even to the conventional designs of the mummy wrappings, to these portrait mummies, is convincing.⁴⁴ The odd shape of the tomb on the ivories seems to have no apparent connection with Egyptian customs of burial, although it recalls vaguely an Egyptian mummy case set upon end.

Group XI-A, the *Byzantine* type in the characteristic examples, follows accurately the account in John and introduces in a narrative composition all the characters of whom the Evangelist speaks. The type first occurs in the Codex Rossanensis⁴⁵ (Fig. 110) which was executed somewhere in Asia Minor during the sixth century. Within a rock hewn tomb is seen the swathed body of Lazarus supported on the right by a servant; Christ, bearded and clothed with a purple tunic, over which hangs a gold mantle, wears a large cruciform nimbus; at the feet of the Saviour the two sisters

⁴³ W. Flinders Petrie, *Portrait Mummies of Kahun and Hawara*, publication of the British School of Archaeology in Egypt, 1911. A bare headed mummy, represented by a figurine of Christian workmanship from a grave at Akimim, shows beyond question that it was the custom in Coptic times to depict such mummies as Lazarus with the head bare (Forrer, *Die frühchristlichen Alterthümer aus dem Gräberfelde von Achmim-Panopolis*, pl. XIII/17).

⁴⁴ Petrie, *Roman Portraits and Memphis* (IV), 1911, pls. XI, XIII, XIV.

⁴⁵ Table VIII, no. 123.

of Lazarus, Mary and Martha, are prostrate; and behind Him, to right and left, are groups of disciples and spectators. This same type appeared among the lost mosaics of the Church of the Holy Apostles at Constantinople,

FIG. 110. ROSSANO: GOSPELS. THE RAISING OF LAZARUS.

which are dated by Heisenberg in the sixth century and by others in the ninth.⁴⁶ While certain of the details are left out in some later examples of this type (Fig. 111), this rendering of the Rossano Gospels was in its essentials faithfully preserved down to the fifteenth century in the East,⁴⁷ and imitated in the Ottonian⁴⁸ and Italo-Byzantine art⁴⁹ of the West where Byzantine iconography exerted influence. The presence of this type, with the two sisters omitted from the composition, on the ciborium columns of San Marco is rather hard to explain in view of the date in the sixth century which is usually given them.⁵⁰

Group XI-B, which is composed of Italo-Byzantine monuments and two examples from Mt. Athos dating from the twelfth to the fifteenth centuries, shows Lazarus with a nimbus.⁵¹

XIV

THE ENTRY INTO JERUSALEM

A scene of far less popularity than many others, the Entry into Jerusalem is not only frequent on the monuments of early Christian art but also

⁴⁶ See p. 31, note 74.

⁴⁸ Table VIII, no. 131.

⁵⁰ Table VIII, no. 125.

⁴⁷ Table VIII, nos. 127, 129, 130, 132, and Group 11-B.

⁴⁹ Table VIII, nos. 126, 133-136.

⁵¹ Table VIII, Group 11-B.

offers few marked features which aid in dividing the differing representations into particular types peculiar to definite regions and centuries. The large division of East and West may be distinguished by the manner in which Christ rides; on the monuments of the West the Saviour is always depicted riding astride, while on those of the East He is invariably shown

FIG. III. PARIS: BIBL. NAT., MS. GR. 510.
THE RAISING OF LAZARUS.

seated sidewise on the ass. The actual types which emerge from the various representations of the Entry into Jerusalem are the Hellenistic or Western type, the Alexandrian-Coptic, the Palestinian-Coptic, and the Byzantine type.

THE HELLENISTIC TYPE

The dominant and distinguishing feature of the Hellenistic type is the representation of Christ riding astride. While all the monuments of this type are Western and this one detail of the scene distinguishes¹ the representations of the East from those of the West, the actual fashion of riding astride was not so much Western as it was Hellenistic. The Greek rode astride his horse and this Hellenistic method of riding, followed by the Romans, was permanently preserved in the West. In the East, however, the native method of riding sidewise had by the sixth century so far supplanted in Asia Minor, Syria, and Egypt the older

¹ Strzygowski, *Byz. Denk.*, I, p. 38; Heisenberg, *Grabeskirche und Apostelkirche*, Leipzig, 1908, II, p. 247; Dobbert, *Jb. Preuss. Kunsts.*, XV, 1894, p. 149; Dalton, *Byzantine Art and Archaeology*, 1911, p. 656; Haseloff, *Codex Purpureus Rossanensis*, p. 91 sq.

fashion that when the Entry into Jerusalem began to figure on the monuments of the Orient, the sidewise position was used for the figure of Christ.²

Like the other Hellenistic scenes which originated in the cities of the East, were transmitted to Rome, and became Western types, the

FIG. 112. ROME: SARCOPHAGUS. CHRIST ENTERING JERUSALEM.

Hellenistic Entry into Jerusalem is a mere symbolical abbreviation of the actual event. Only the actual essentials of the scene are figured: as a rule the disciples who accompanied Christ are reduced to one; the city, and the multitude who came forth bearing palms, are omitted; and the whole acclamation of Christ as King of the Jews is symbolized by the single figure of a youth plucking the branches in the top of a tree and by a man who spreads his mantle beneath the feet of the ass.

Group I. *The Hellenistic Type with Christ riding astride.*

On the monuments³ of this group, which are all sarcophagi and with one exception all come from Rome, Christ, without the nimbus or any other symbol of His divinity, rides in the Hellenistic fashion (Fig. 112). Before Him a man spreads his mantle, and behind there usually follows a single disciple, although in three⁴ representations the disciple is omitted.

² The Hellenistic method of riding was preserved in scenes of actual horsemanship: fresco at Bawit (Diehl, *Manuel*, fig. 23), wood carving from Alexandria (Diehl, *op. cit.*, fig. 25), Barberini diptych (Diehl, fig. 141), a sixth century silver dish from Kertch (Diehl, *op. cit.*, fig. 150) and a Coptic textile in the South Kensington Museum (Dalton, *op. cit.*, fig. 46).

³ Table IX, nos. 1-12.

⁴ Table IX, nos. 9, 10, 11.

All the scenes show the youth picking branches in the tree; in two⁵ a few figures come forward with palm branches to meet him; and on two sarcophagi⁶ the city of Jerusalem is represented.

Group II. *Provençal Group of the Hellenistic Type.*

The scene on the Milan covers⁷ (Fig. 113) connects itself with the representations of the Roman sarcophagi in that the Saviour rides astride,

FIG. 113. MILAN: CATHEDRAL, IVORY BOOK COVERS. CHRIST ENTERING JERUSALEM.

but is even more abbreviated and symbolical. Its essential difference from the scenes on the Roman sarcophagi is the omission of the youth in the tree.

Group III. *Manuscript Continuation of the Type in the West.*

While the scene in the Cambridge Gospels,⁸ the Sacramentarium of Drogo,⁹ the Codex Egberti,¹⁰ and the Gospels of Bernward¹¹ is primarily a continuation of the Hellenistic type in that the Saviour is represented riding astride, it is also a derivative of what we shall see is the more amplified and historical Byzantine type. From Constantinople in the ninth, tenth, and eleventh centuries there was a steady infiltration into the West, and especially into the Ottonian Empire, of Byzantine decorative motifs and iconography. The more narrative representation of the scene in these manuscripts, in which the disciples are increased to three and even

⁵ Table IX, nos. 11, 12.

CHRIST ENTERING JERUSALEM.

to six (Codex Egberti), and the number of people with palm branches to two, four, and six, and in which the city is always represented, is explained by the spread of the Byzantine type.

THE EAST

The Eastern types, like the Hellenistic, appear to have had only the canonical accounts in Matthew, Mark, Luke, and John¹² for textual sources. As the apparent sources were the same and as the slight popularity of the Entry into Jerusalem in the Orient did not tend to create distinct indigenous forms, the Eastern types, save for the Oriental feature of Christ riding sidewise, preserve quite closely the features of the older Hellenistic rendering.

¹² Matt. xxi; Mark xi; Luke xix; John xii.

Group IV. *The Alexandrian-Coptic Type where a carpet instead of a mantle is spread beneath the feet of the ass.*

The scenes on the Maximianus chair¹³ from Alexandria (Fig. 114), the Etschmiadzin book covers,¹⁴ a sixth century ivory cover in the Bibliothèque Nationale at Paris¹⁵ (Fig. 115), and a carved lintel at el

FIG. 115. PARIS: BIBL. NAT., IVORY BOOK COVERS. CHRIST ENTERING JERUSALEM.

Mu'allaka near Cairo¹⁶ (Fig. 116) are bound into a group and segregated from the other representations by the curious feature of the *long carpet* which is unrolled, instead of a mantle, in the pathway of the Saviour. These representations are further bound together by other

FIG. 116. CAIRO: EL MU'ALLAKA, CARVED WOODEN LINTEL. CHRIST ENTERING JERUSALEM.

similarities in composition, by the odd, high stepping movement of the ass, and by Christ's posture on the animal. In distinction from all other examples of the scene, the Christ on the Maximianus and the Etschmiadzin ivories carries in His hand a cross. This cross has already been pointed out as the emblem of divinity which the Egyptian artists regularly gave to Christ. The Etschmiadzin and Paris examples are more closely related by the introduction of a Tyche, wearing (Etschmiadzin) a crenellated crown, who comes forth as the personification of the city to meet the Saviour. This same representation of Tyche, with her turreted crown, appears among the miniatures of the Joshua Rotulus,¹⁷ the original of which, according to Strzygowski, was executed in the third or fourth century by a Greek artist living in Alexandria.

¹³ Table IX, no. 20.

¹⁴ Table IX, no. 21.

¹⁵ Table IX, no. 22.

¹⁶ Table IX, no. 23.

¹⁷ Garr, *op. cit.*, III, pl. 163.

The connection of this type with Egypt is sustained, not only by its appearance on the Maximianus chair, and by the presence of the cross which Christ usually carries on Egyptian monuments, but also by its occurrence on the carved wooden lintel of the church of el Mu'allaka near Cairo.

Group V. *Palestinian-Coptic Type.*

There is little to distinguish this type from the regular Hellenistic type save the Saviour riding sidewise on the ass. In the Rabula Gospels¹⁸ of Syria (Fig. 117) the Saviour, mounted sidewise, is followed by a single

FIG. 117. FLORENCE: LAURENTIANA, GOSPELS OF RABULA. CHRIST ENTERING JERUSALEM.

disciple, and before Him a man spreads his mantle while three other men come forward with palm branches. It is interesting to note that this scene is essentially duplicated on the ciborium columns of San Marco.¹⁹ With slight variations this abbreviated Eastern type occurs in a Coptic textile from Antinoë²⁰ and on a Coptic seal in the British Museum;²¹ and was also continued in a mosaic of the chapel of John the Seventh at Rome.²²

Group VI. *The Byzantine Type.*

This is the historical type which faithfully follows the Gospel accounts

¹⁸ Table IX, no. 24.

¹⁹ Table IX, no. 25. In Wulff's *Altchristliche Bildwerke* (Cat. Kaiser-Friedrich Museum), I, no. 72, p. 33, is published a stone relief from near Sohag (Egypt); on it is figured what the author calls an Entry into Jerusalem, where Christ wearing a cruciform nimbus rides sidewise while one nimbed angel leads the ass and another follows.

²⁰ Table IX, no. 26.

²¹ Table IX, no. 27.

²² Table IX, no. 28.

and translates into pictorial form the event with all its figures as related in the New Testament. Its earliest and perhaps first appearance is in the Codex Rossanensis from Asia Minor²³ (Fig. 118). In this miniature, Christ, wearing a cruciform nimbus and followed by two disciples, is depicted riding sidewise; two boys spread a mantle beneath the feet of the ass, while two other boys climb a tree, or are perched in its branches; a large multitude issues forth from the gates of the city

FIG. 118. ROSSANO: GOSPELS. CHRIST ENTERING JERUSALEM.

to meet the Saviour. From the windows of the houses within the walls people look out upon the scene. This historical type of the Rossano Gospels existed in a mosaic on the walls of the Church of the Holy Apostles at Constantinople.²⁴

In the ninth century we see the Byzantine type fully developed, with all twelve apostles represented, in the Homilies²⁵ of Gregory of Nazianzus at Paris (Bibl. Nat., gr. 510), (Fig. 119). It continues on the Byzantine monuments,²⁶ with slight variations in the number of figures included in the scene, as the traditional type. As evidence of the spreading of the Byzantine type into the West, we find it in the eleventh century in the frescoes of S. Angelo in Formis.²⁷ Its influence is also apparent in the Ottonian manuscripts (Group III) which, although they adhere to the Hellenistic tradition in representing Christ riding astride, show, nevertheless, an amplified and historical type like the Byzantine.

XV

THE LAST SUPPER

The actual representation of the Last Supper as an historical event does not appear in Christian art until a late date. While it is necessary not to confuse this historical Last Supper with the Eucharistic repast,¹ so common in the catacombs, there also developed, besides the historical type, a liturgical type which was derived from the Eucharistic symbolism of the Hellenistic period. This liturgical type, which represents the Last Supper as a First Communion, shows Christ standing and breaking bread, which, with the wine, He distributes to His apostles. The historical type is more narrative and regularly figures Christ and His disciples seated on the bolster of a sigma shaped couch about a semi-circular table, or in the later representations at a long straight table, on which is set the bread and wine. As a rule it represents the particular moment when Judas reaches forward to dip or to grasp the food and John affectionately reclines upon the breast of the Saviour. Besides these two types there was a transitional type, formulated in the West about the beginning of the sixth century, in which an actual Last Supper is represented with Christ and the apostles seated about a table, but the

¹ Leclercq in Cabrol's *Dictionnaire d'archéologie chrétienne et de liturgie*, s. v. "Cène," col. 3046. For a discussion of the Last Supper in art see: Dobbert, "Das Abendmahl in der bildenden Kunst bis gegen den Schluss des 14. Jahrhunderts," *Repertorium für Kunstwissenschaft*, XIII (1890), pp. 281-292, 423-442; XIV (1891), pp. 175-203, 451-462; XV (1892), pp. 357-384, 506-527; XVIII (1895), pp. 336-379; Heisenberg, *Grabeskirche und Apostelkirche*, p. 175; Dalton, *Byzantine Art and Archaeology*, p. 658.

loaves and fishes, after the early catacomb conception of their Eucharistic significance, are substituted in place of the bread and wine of the historical event.

It is this transitional type which appears on the Milan book covers and is important in showing the Western origin of the ivories. Therefore, in order that the transitional character and especially the Western relation of the type may be understood, it is necessary to give a brief outline of the facts concerning the history of the Eucharist in early Christian art. The different theories which scholars have advanced concerning the Eucharist and the readiness with which the subject lends itself to deductions make it dangerous to do more than state the generally accepted steps in the formation and development of Eucharistic symbolism. From the very first the Multiplication of the Loaves and Fishes, after the interpretation in the Gospel of St. John,² was considered the principal symbol of the Eucharist. This is demonstrated by the fact that the baskets of

FIG. 120. ROME: CEMETERY OF LUCINA, FRESCO.

loaves, the characteristic feature of the miracle, are included in the only representation of the Lord's Supper which occurs in the catacombs (Priscilla, second century).³ The miracle itself is represented by a series of catacomb paintings of the second century and the early third century in which seven people reclining on a couch of sigma shape partake of a meal at which are served loaves and fishes, while in the foreground of the scenes are usually figured seven baskets of bread.⁴ In none of these representations is Christ depicted. By the first half of the second century the idea of feasting was no longer necessary to the symbolism, for in the crypts of Lucina in the catacombs of Callixtus⁵ are two pictures (Fig. 120) consisting of a fish and a single basket filled with loaves while elsewhere

² Lamberton, *St. John's Gospel in Roman Catacomb Painting*, p. 79.

³ Lamberton, *op. cit.*, p. 79.

⁴ Wilpert, *Fractio Panis*, pls. XIII-XIV.

⁵ Wilpert, *Le pitture delle catacombe romane*, pls. 27/1, 28.

in the catacomb of Callixtus is a fresco in which a man extends his hands in blessing over a tripod on which are a fish and loaves; before him stands a veiled orant raising her hands in prayer⁶ (Fig. 121). There are other representations in which the scene is reduced only to the loaves and fishes.

By the end of the third century the symbolism had been even more

FIG. 121. ROME: CATACOMB OF CALLIXTUS, FRESCO.

abbreviated and the multiplication of the loaves alone had come to stand for the Eucharist. Thus the symbolism was narrowed down to the simple scene of Christ touching with His wand the seven baskets of bread. This scene while occurring twenty-eight times in the catacombs⁷ during the third and fourth centuries was also equally common on the Western sarcophagi, although in these sarcophagi representations the number of baskets is usually reduced to six, three, or even one (Fig. 122). In a fresco of Callixtus the Eucharistic symbolism is extended by the addition of two disciples who present the bread and fish to Christ for His blessing.⁸ This more historical, and probably less symbolical, rendering of the multiplication where the disciples are about to distribute the bread and fish to the multitude, who are not figured, was rare in the catacombs but was a most common scene on the Roman sarcophagi of the fourth century (Fig. 123). An ample and interesting rendering of this Eucharistic Multiplication of the Loaves and Fishes is seen in the third century frescoes of the catacombs of Alexandria in Egypt (Fig. 124). Christ is enthroned between the Apostles Peter and Andrew, who advance to receive His blessing on

⁶ Wilpert, *op. cit.*, pl. 41/1.

⁷ For all the catacomb examples see Wilpert, *op. cit.*, p. 269 sq.

⁸ Wilpert, *op. cit.*, pl. 237/1, p. 276.

meaning is apparent it is impossible to suppose that any of them symbolizes the Last Supper, for there was no significance in the Last Supper to the early Christians save as it symbolized the Eucharistic Transubstantiation. "A symbol itself is but an outward form by the understanding of which one appreciates a hidden significance. Hence it would be useless to give a form to a form, to symbolize a symbol."¹³

The transitional type of the Last Supper is primarily a representation of the Last Supper as a symbol of the Eucharist. It is historical, however,

FIG. 125. RAVENNA: MUSEUM, IVORY PANELS FROM CHAIR OF MAXIMIANUS.
THE MIRACLE OF LOAVES AND FISHES.

to the extent that it depicts the actual repast that Jesus held with His disciples after His entry into Jerusalem. It is frankly symbolic in that it retains the catacomb symbolism of the Multiplication of the Loaves and Fishes and instead of depicting the actual repast of bread and wine it substitutes, or rather retains, the fish in place of the wine. The most apparent example of this type is found at the beginning of the sixth century in the mosaics of Sant' Apollinare Nuovo (Fig. 127) where Christ and His disciples recline on a raised couch of sigma shape about a semi-

¹³ Lamberton, *op. cit.*, p. 88.

circular table. Seated at the left end of the table is the Saviour who wears a cruciform nimbus and stretches forth His hand to bless the six loaves and the two fish which lie upon the table.

The preservation of the old Eucharistic symbolism in an historical setting is clearly intentional on the part of the artist in this mosaic, and intended to give to the Last Supper a symbolic interpretation. While the highly developed symbolism of the Hellenistic period of Christian art was breaking down at the beginning of the sixth century there were still theologians at least as late as the fifth century who were expounding the Eucharistic significance of the Fish.¹⁴ The transitional character of this scene, however, lies in the fact that the

FIG. 126. ROME: CATACOMB OF SS. PIETRO E MARCELLINO, FRESCO. EUCHARISTIC BANQUET.

old Eucharistic repast is figured in the guise of an historical event. There is a striking similarity in the mosaic, especially in the form of couch and the table, whose ends form three rectangular panels across the bottom of the composition, with the historical scene of the Last Supper in the Rossano Gospels (see Fig. 131). This method of representing a banquet scene appears to have been more or less peculiar to Asia Minor in the sixth century, for the same sigma shaped couch about a semi-circular table occurs in the Feast of Herod in the Sinope Fragment.¹⁵ The subsequent Byzantine type as it first appears in the sixth century in the proto-Byzantine Gospels of Rossano is primarily an historical and narrative representation of the actual event without particular reference to its Eucharistic significance. This narrative tendency in Christian art was an Oriental reaction against

¹⁴ Augustine Chrysologus, the Pseudo-Prosper, and the author of the *Narratio*; see C. R. Morey, *The Princeton Theological Review*, 1911, pp. 421, 424, 426, 431.

¹⁵ Diehl, *Manuel*, fig. 125.

the restrained, simplified and highly symbolic methods of rendering the Gospel scenes during the first five centuries when art, as well as thought, was dominated by Neoplatonic mysticism. While the realistic tendency was the result of indigenous Eastern influences, it naturally also appears in such centres as Ravenna where Oriental forms and methods met and gradually supplanted the Hellenistic symbolic types current in the West,¹⁶ so that for a time there existed in the art of Ravenna an eclectic mingling of the two tendencies which resulted in transitional types wherein the older symbolism was presented in historical settings. From this fusion

FIG. 127. RAVENNA: S. APOLLINARE NUOVO, MOSAIC. THE LAST SUPPER.

of the Hellenistic symbolism and the Oriental realism was formed a transitional type of the Last Supper which is most clearly expressed in the mosaic of Sant' Apollinare Nuovo.

Although the mosaic scene is the clearest representation of this type, there exist other examples in the West where the Last Supper is represented in a more limited historical manner. Among these other scenes which in the retention of the catacomb symbolism of the loaves and the fishes show a Western origin is the scene on the Milan book covers¹⁷ (Fig. 128). Here are represented four figures reclining on a raised and sigma shaped couch about a semi-circular table on which are set seven pieces of bread and a dish containing a fish; at the left of the composition sits the Saviour blessing the food with His right hand; next to Him is a disciple who drinks while a second disciple watches; at the end of the table opposite to the Saviour reclines a third disciple who turns his head to follow the Master's gesture.

¹⁶ See Strzygowski: *Ravenna als Vorort aramäischer Kunst*, (*Oriens Christ.*, V, 1915, p. 83).

¹⁷ Garr., *op. cit.*, VI, pl. 455.

That the scene is a Last Supper, as it is called by Molinier,¹⁸ Stuhlfauth,¹⁹ and Dobbert,²⁰ and neither the Supper at Emmaus as Venturi interprets it²¹ nor Christ dining with Lazarus and his sisters as Westwood suggests,²² is indicated by the gesture which Christ makes toward the viands on the table. The limited number of disciples is explained by the transitional character of the composition. Other representations of the Last Supper during the first eight centuries of Christian art in the West show an abbreviation of the number of the disciples who sat at table with the Saviour. In the scene on the columns of the ciborium of San

FIG. 128. MILAN: CATHEDRAL, IVORY BOOK COVERS. THE LAST SUPPER.

Marco²³ there are only three figures seated at the table, in the eighth century mosaic in the Chapel of John VII²⁴ the number is five, and in the seventh century Codex Cambricensis²⁵ there are eight disciples.

While the narrative rendering of the scene on the Milan book cover is not so accurate and realistic as in the mosaic of Sant' Apollinare Nuovo, it is none the less a transitional representation of the Last Supper and is to be classified with the Ravenna example as a Western type. In the first place it preserves the Eucharistic symbolism of the loaves and fishes which was characteristic of the Ravenna representation. In the second place, although the number of disciples is abbreviated, it is none the less a narrative rendering of the Last Supper as an event and is similar to

¹⁸ Molinier, *Hist. gén. des arts appliqués*, I, *Ivoires*, p. 61.

²⁴ Garr., *op. cit.*, IV, pl. 280/7.

the scene of the mosaic in that the ends of the raised couch with the end of the table form three contiguous panels across the bottom of the composition. This feature is important, for it recalls the Eastern banqueting scenes rather than the Western feasts in the catacombs where the people lie on a semi-circular bolster placed upon the ground. The semi-circular table at Ravenna with the seven loaves and the two fishes, which reappears on the column of San Marco with six loaves, was, according to Fleury,²⁶ one of the most ancient forms given to the sacred table itself; at Vienne he

FIG. 129. FLORENCE: LAURENTIANA, GOSPELS OF RABULA. THE COMMUNION OF THE APOSTLES.

cites an altar of the seventh century which not only has the same shape but also has on its top the places for six loaves of bread. The scene on the Milan ivory is, like the mosaic scene, a rendering of the Last Supper in its Eucharistic, symbolic sense.

Thus the scene on the Milan ivory, while it does not aid in localizing the covers in Provence, sustains their Western origin and points to their origin in a community similar to Ravenna, as was Marseilles, where Western symbolism was breaking down under Eastern influences. The Western character of the transitional type is mainly shown by the retention of the old catacomb symbolism of the loaves and fishes and the resultant symbolic significance of the type which contrasts with the more

²⁶ Fleury, *La Messe*, I, p. 164, pl. LII.

purely narrative rendering of the historical type in the East. This symbolic character is more manifest on the Milan covers where the apostles are reduced to three. The parallels for this abbreviation of the number of the apostles are all on monuments of the West which show in other scenes an odd eclectic mixture of Eastern and Western forms.

The liturgical type scarcely enters into a discussion of the Last Supper as a scene in early Christian art.²⁷ It is hardly correct to say that it represents the Last Supper at all, for Christ is represented as a priest in the First Communion with His apostles, and the scene is only related to the historical event by reason of the fact that the Last Supper was the occasion of the First Communion. As a type, then, it was developed in a purely

FIG. 130. ROSSANO: GOSPELS. THE COMMUNION OF THE APOSTLES.

dogmatic sense and was related solely to the Eucharist. As the Multiplication of the Loaves and Fishes was the symbolic method of depicting the Eucharist followed in the West, this more realistic form where Christ, as the celebrant, is shown administering the bread and wine to His disciples, was the Oriental manner of representing the sacrament.

The liturgical type appears in the sixth century in the Rabula Gospels²⁸ (Fig. 129). In a miniature of this manuscript the Saviour stands on a small mound holding in His left hand the chalice and in His right hand the wafer, both of which He offers to the eleven apostles who stand before Him. In the same century it occurs along with the historical repre-

²⁷ E. Dobbert, *Über die Darstellung des Abendmahls durch die byzantinische Kunst*, 1872, p. 22; Baumstark, *Röm. Quart.*, 1905, pp. 206-207; Heisenberg, *Grabeskirche und Apostelkirche*, p. 175; Leclercq, *op. cit.*; Dalton, *op. cit.*, p. 666.

²⁸ Garr., *op. cit.*, III, pl. 137/2.

sensation of the Last Supper in the Codex Rossanensis²⁹ (Fig. 130). After Byzantine art became fully formulated this subject was a favorite theme for the decoration of apses and occasionally of domes, as in the monasteries of Vatopedi and Chilandari at Mount Athos.³⁰ The fully developed form of the type is found in the eleventh century in the mosaics of the cathedral of Kieff.³¹ In the centre is an altar standing before a ciborium on each side of which is an angel serving as sub-deacon to our Lord. Christ is twice represented, on the right offering a cup to six apostles and on the left presenting the bread to six more apostles. Much the same rendering occurs in the eleventh century in the mosaic of the Cathedral of Serres³² in Macedonia and in the frescoes of the churches of Cappadocia and Lycia.³³ Later in southern Italy, as a result of Byzantine influence in the West, the type appears in the frescoes of S. Angelo in Formis and in the chapel of S. Angelo at Monte Raparo (Basilicata).³⁴

The historical type, which is an actual representation of the Last Supper as an historical event without any manifest importance attached to the symbolic significance of the scene, was created in the East and developed as a Byzantine scene which soon after its inception in the sixth century passed into the art of the West. The various changes that the type went through in its development have been most carefully studied and clearly presented by Dobbert and it suffices for our purpose to note that it appears to have originated in the sixth century on proto-Byzantine monuments of Asia Minor. In a miniature of the Rossano Gospels³⁵ (Fig. 131) Christ with His twelve disciples is represented reclining at the left hand end of a couch of semi-circular shape with the chord toward the spectator; near the middle of the disciples, who are arranged about on the bolster, lies Judas stretching forth his hand to grasp the food on the table. The fact that the liturgical type occurs in the Rossano Gospels along with this historical representation shows that there was no particular importance laid on the actual Last Supper as a

symbol, at least as a symbol of the Eucharist. The scene of the Last Supper among the Biblical representations on the walls of St. Sergius at Gaza, built by Justinian, as it is described by the chronicler Choricios,

FIG. 131. ROSSANO: GOSPELS. THE LAST SUPPER.

was very like the miniature scene of the Rossano Gospels.⁸⁶ With few changes this rendering of the Rossano Gospels was adopted as the Byzantine type; by the ninth century the added feature of John leaning on the Master's breast made the scene even more narrative in character.⁸⁷

XVI

THE PRESENTATION OF THE CROWNS

The scene on the Milan ivory (Fig. 132) of Christ, young and beardless, seated upon a starry globe and blessing with outstretched and veiled hands the crowns, which an apostle, saint, or martyr presents to Him on either side, appears to have been an Italian motif used only in the West.¹ It is impossible to interpret the scene as the Multiplication of the Loaves and Fishes, as Dobbert suggests,² from the fact that the figures on either side of Christ present neither bread nor fish for His blessing, but instead carry wreaths.

These two figures presenting their wreaths to Christ are not Peter and Paul, as many writers consider them to be,³ but are unknown Chris-

⁸⁶ Dobbert, *Repertorium* (1891) XIV, p. 198; *Choricii Gazaei Orationes, fragmenta*, ed. Boissonade, pp. 91-98.

⁸⁷ The first representation of John leaning upon the breast of the Master is said to occur in the eighth century at Ferentillo (Dobbert, *op. cit.*, XIV, p. 182).

¹ Garr., *op. cit.*, VI, pl. 455.

³ Bugati, *Mem. di S. Celso*, p. 275; Westwood, *Fictile Ivories*, p. 41; Molinier, *Hist. gén. des arts appliqués*, I, *Ivoires*, p. 61; Stuhlfauth, *Elfenbeinplastik*, p. 68, calls the scene "die Huldigung an den triumphierenden Christus."

tian martyrs. The two figures on the ivory are both beardless, and at the time the Milan covers were executed, c. 500, the types of the two apostles had been firmly established in the Western art. Paul was represented with a long, pointed beard and a bald forehead and Peter was always depicted with a short, stubby beard and the Roman tonsure. This

FIG. 132. MILAN: CATHEDRAL, IVORY BOOK COVERS. PRESENTATION OF THE CROWNS.

convention regarding the two Saints in the "Traditio Legis," which the scene on the ivory would represent if we were to consider the figures to be Peter and Paul, was generally preserved on all the monuments of Rome,⁴ Ravenna,⁵ and Gaul.⁶ While it is impossible to interpret the figures as Peter and Paul, it is certain from the wreaths which they carry that they are Christian martyrs as Garrucci⁷ and Venturi⁸ assert. There is no reason, however, to assume with Garrucci that the martyrs are the Milanese Saints Gervasius and Protasius. The fact that it was the custom throughout the West to represent local martyrs, as well as apostles, offering crowns or wreaths to the Saviour makes any specific interpretation of their names a pure speculation.⁹

Christ enthroned upon a globe, which is the unique feature of the composition, was, as far as existing monuments give any evidence, an

⁶ Sarcophagi; S. Maximin (Garr. 334/3), Arles (335/2), Arles (342/3), Marseilles (342/1).

⁷ Garr., *op. cit.*, VI, p. 82.

⁸ Venturi, *Storia*, I, p. 510.

⁹ Sarcophagi; Lérins (Garr., *op. cit.*, V, pl. 329/2), Ravenna (pl. 346/2, 349/2, 3).

Italian motif. While the globe on the Milan covers is its only occurrence on the early Christian ivories, it was frequently used in the West, before the iconoclastic controversies, for the scene of the "Traditio Legis" and of the blessing of the crowns of Saints. Christ seated upon a globe has not remained to us on any early monuments of the East but, as may be seen from the following list, it occurs in Rome as early as the middle of the

FIG. 133. ROME: S. COSTANZA, MOSAIC.
CHRIST AS LOGOS, GIVING THE LAW TO MOSES.

fourth century (Fig. 133) and in many Western monuments of the fifth, sixth, and seventh centuries:

- 1) Santa Costanza, Rome,¹⁰ IV century; mosaic.
- 2) S. Agata in Subura, Rome,¹¹ V century; mosaic.
- 3) Milan book cover, Provence, cir. 500.
- 4) San Vitale, Ravenna,¹² c. 530-547; mosaic.
- 5) Sts. Felix and Adauctus, Rome,¹³ VI century (middle); fresco.
- 6) San Lorenzo, Rome,¹⁴ 578-590; mosaic.
- 7) Cathedral, Parenzo,¹⁵ VI century; mosaic.
- 8) San Teodoro, Rome,¹⁶ VII century; mosaic.

It is possible that the motif of Christ seated on a globe originated in the East, for Christ standing on the globe occurs not only in a fourth century fresco in the catacomb of Priscilla at Rome,¹⁷ but also in the fifth century in the mosaics of the Baptistery of Naples which were executed under

¹⁰ Garr., IV, pl. 207; Ainaloff in the *Journal of Public Instruction*, St. Petersburg, 1895, p. 267, sees in this scene a strong resemblance to the scene in San Vitale.

¹⁷ De Rossi, *Bullettino*, 1887, p. 25, pl. VII.

Syrian influence.¹⁸ The "Traditio Legis" in which it first appears is probably also of Syrian origin.¹⁹ Nevertheless, the monuments listed above show that by the fifth century the type was well known in Rome and in the north of Italy.

In much the same rendering as that on the Milan ivory the mosaic of San Vitale shows Christ offering a crown to San Vitale. The scene in San Lorenzo at Rome represents St. Hippolytus offering his crown to the Saviour, and the mosaic of San Teodoro depicts two saints with crowns being presented to Christ by Peter and Paul. As martyrs offering their wreaths to Christ were customarily represented on the monuments of Rome, Ravenna, and even of Narbonne,²⁰ and Christ seated on a globe and either blessing or presenting crowns to saints was figured on the mosaics of Rome and Ravenna before the Milan covers were executed, the appearance of this scene on the ivory is indicative of Western origin.

XVII

THE WIDOW'S MITE

A highly problematic scene on the Milan ivory shows Christ seated upon a globe and stretching forth His hand to a woman who appears to be dropping something on a table which is between them (Fig. 134); behind the woman are figured two men who express by their gestures great surprise at the event.¹

Of all the various subjects which have been suggested, the most plausible is Christ and the Widow's Mite. That it does not represent Christ and the Samaritan Woman, as Molinier asserts,² is manifest from the absence of the well and the presence of a table between Christ and the woman. If anything, it is less likely that it represents the Woman Taken in Adultery, for not only was the scene very uncommon in the whole history of Christian art, but also the appearance of the table on the Milan

ivory can not be explained or paralleled in any other examples.³ Both of these interpretations are based on the fact that in the eleventh century there appear in the frescoes of S. Angelo in Formis representations

FIG. 134. MILAN: CATHEDRAL, IVORY BOOK COVERS. THE WIDOW'S MITE.

of these two scenes, in both of which Christ, most oddly, sits upon a globe.⁴

As the Widow's Mite the scene on the Milan book covers⁵ is similar, save for the globe, to the rendering of the same scene in a mosaic of S. Apollinare Nuovo at Ravenna (Fig. 135). In this sixth century mosaic the widow stands at the left of the composition, her hand extended over a table, which resembles the table on the ivory, and faces Christ, who is accompanied by a single disciple.⁶ With the exception of the globe, both representations are noticeably alike and accurately illustrate the Gospel account.⁷ It is also interesting to note that about the middle of the fifth century Perpetuus recorded that among other Biblical scenes the Widow's Mite was figured on the walls of the church of St. Martin at Tours.⁸

Whatever the correct interpretation of the scene may be, we have

³ Examples of this scene occur at S. Apollinare Nuovo (Fleury, *L'Évangile*, pl. LVIII/2), and in the Homilies of Gregory of Nazianus, gr. 510, Bibl. Nat., Paris (Fleury, *op. cit.*, pl. LVIII/3).

already indicated the Italian character of the globe as a seat for Christ.⁹ Although the only other examples of its use in miracle scenes in the eleventh century are the frescoes of S. Angelo in Formis, its frequent use in other connections from the fourth to the eighth century in Italy and its continuation in Carolingian art leaves little doubt as to the Western origin of the scene on the Milan book covers.

XVIII

CHRIST TRIUMPHANT

The representation of Christ trampling under foot the lion, the dragon, the asp and the basilisk as depicted on the Bodleian book cover, the ivory so frequently cited in connection with the preceding scenes, presents a composition which not only may be connected with early Carolingian art in France but also may be traced back to a prototype of Egyptian origin. This transmission of Egyptian types into early French art is neither surprising nor peculiar to this particular scene. In the first place it was the natural continuation, if not the actual result, of that Eastern influence which entered Provence through Marseilles and spread through Gaul in Carolingian times. The importance of the rôle that Egyptian models played in the development of Carolingian art at that time when the art of the North was emerging under Christian tutelage from barbarism has been shown in various aspects. The Syro-Egyptian influence on Merovingian and Carolingian miniatures,¹ the presence of Egyptian art

⁹ See p. 142.

¹ The influence of Egypt and Syria on Merovingian art has already been established

objects, like the Barberini diptych,² in Frankish cities at an early date, and the dependence of certain reliefs at Aachen on Egyptian or Alexandrian models make this relation manifest. The most interesting parallel for the present problem is the connection of the scenes, and their technique, on the ivory pulpit of Charlemagne at Aachen with Coptic and Alexan-

CHRIST TRIUMPHANT.

drian prototypes.³ Among these early Frankish scenes, the representation of a mounted horseman lancing an animal upon the ground has been shown, by Strzygowski,⁴ to have been taken from a Christian type of Egypt which in its turn was derived from the mounted Horus in Egyptian

and a brief summary, with a good bibliography, of the subject may be found in Michel's *Histoire de l'art chrétien*, vol. I, pp. 395-400. For the dependence of Carolingian and Ottonian illumination on Syro-Egyptian models see: Strzygowski, *Hellenistische und Koptische Kunst*, and *Byzantinische Denkmäler*, I, p. 58, Michel's *Histoire de l'art chrétien*, I, pp. 340, 400 sq., Haseloff, *Der Psalter Erzbischof Egberts von Trier*, p. 133, cf. *Byz. Zeit.*, XI, p. 566, and Janitschek, *Die Trierer Ada-Handschrift*, p. 85.

⁴ Strzygowski, *op. cit.*, fig. 16.

art. By the same stages the scene of Christ standing triumphant on the evil beasts came to Carolingian art directly from Egypt where it was also developed from the representations of the youthful Horus trampling under foot the beast which, in Nilotic mythology, symbolized the evil and malignant powers.

This relation between the Christian idea of Christ Triumphant over evil and the old Egyptian conception of Horus was presented by Néroutsos-Bey when he published an account of the Christian frescoes remaining in a funeral chapel of Alexandria.⁵ The usual type of Horus on the Egyptian reliefs, as this author points out, shows the young god standing on the heads of two crocodiles while in his hands he carries serpents, scorpions, a lizard, and a lion.⁶ Often there are figured on either side of him other divinities who aid in mastering the evil beasts and above his head is always portrayed the masque of the great protector, Bes. With this common Egyptian representation of Horus is to be compared the scene in the catacombs of Alexandria (Fig. 136) where the young Christ, beardless and nimbed, tramples under His bare feet the lion and dragon while at His side are the asp and the basilisk.⁷ The two apostles (omitted in Fig. 136) on either side of Him take the place of the Egyptian divinities who frequently accompany Horus, while the nimbed head of God the Father (omitted in my illustration) recalls the masque of Bes, the protector. Beside the apostles, two angels, one on either side, decorate the jambs which terminate the picture. The analogy between the Christian and the pagan scenes is more than that of a similarity in iconography. It is between almost identical conceptions: the Horus relief (Fig. 137) depicts the formula, carved upon it, "trample under foot the crocodiles and master without effort the lion, serpents, etc."; and the Christian scene, as the inscription below it shows, illustrates the words of the Psalmist, "Thou shalt tread upon the asp and the basilisk: the lion and the dragon shalt thou trample under feet."⁸

Other writers have pointed out this relation between the two representations and have admitted the Egyptian origin of the Christian scene.⁹

In fact, before the Alexandrian fresco had been published, Reveillout had noted the striking resemblance which existed between Christ in Coptic literature and Horus in the Egyptian tradition.¹⁰ The Egyptian origin of the scene would be more than certain if the third century date to which

FIG. 137. CAIRO: MUSEUM, RELIEF. HORUS CONQUERING THE REPTILES.

Néroutsos-Bey ascribed the Alexandrian frescoes seemed possible.¹¹ Unfortunately the general character of the frescoes, the inscriptions, and the iconography that includes the Virgin, impresses one with the idea that the frescoes could not have been as early as the third century or, possibly, even the fifth century which marks the limit set by Néroutsos-Bey for their execution and repainting. The connection of the type with Egypt, however, does not depend solely either upon the date of this single fresco or upon the Horus analogy. The same iconography of the scene is preserved on a large number of various objects, of which the majority

¹⁰ Reveillout, *Revue Egyptologique*, 1881, II, p. 65.

¹¹ Néroutsos-Bey, *op. cit.*, p. 51.

are known to have come from Africa and the rest may be shown to have the same origin.

The scene occurs most frequently on the early Christian lamps from Egypt. On one lamp, found on the Palatine and therefore attributed by De Rossi to Rome,¹² the Saviour, beardless and with a cruciform nimbus, is represented treading under foot a serpent on whose head He rests the end of a long handled cross; on either side of the Saviour's head is an

FIG. 138. STRASSBURG, FORRER COLLECTION:
CHRISTIAN LAMP FROM AKMIM. CHRIST TRI-
UMPHANT.

angel, at His left another serpent, to His right a dragon, and beneath His feet a lion. This same type of scene with only the most minor variations occurs on a lamp in the Brûls Collection at Rome¹³ and on another at Madrid which is said to have come from Athens.¹⁴ Besides these examples of apparently doubtful origin the same composition which appears on the

¹³ Garr., *Storia*, VI, pl. 473/4.

¹⁴ Garrucci, *l. c.* p. 109.

Palatine lamp occurs also on three lamps from Africa, *viz.*, a fragment from Carthage,¹⁵ a lamp from Akmim,¹⁶ and another from Bagaï.¹⁷ The likeness between the Palatine example and the one from Bagaï, in Upper Egypt, is extremely close. Further evidence for an Egyptian origin of the three lamps which are not known to have come from Africa is afforded by the Greek inscription on the Brüls lamp, and the ornament and material of the Palatine lamp, which show, as Grisar says,¹⁸ that it could have been executed only in Egypt or the Holy Land. With an almost certain Egyptian origin for all these lamps, the relation of the scene of Christ Triumphant with the same scene in the Alexandrian catacombs is obviously intimate, for the similarity extends even to the angels who fly toward Christ on either side (Fig. 138).

This developed type where Christ tramples on the four beasts was abbreviated in Egypt into a second type, seen also on the lamps, where

FIG. 139. STRASSBURG, FORRER COLLECTION: CHRISTIAN LAMP FROM AKMIM. CHRIST TRIUMPHANT.

the Saviour stands upon a single serpent. On a lamp from Akmim (Fig. 139) Christ is depicted standing on a huge serpent on whose body He rests the end of a long cross that He carries in His right hand.¹⁹ The same rendering, with only a few slight variations, occurs on three lamps from Carthage,²⁰ and on the cover of an earthen vessel in the Cairo

Museum.²¹ The scene on a textile from Akmim is of the same order, although in this case the Saviour carries a small cross in His left hand and with His right hand drives a lance into the mouth of the dragon at His feet.²²

This second abbreviated type passed from Egypt to Ravenna and occurs there for the first time among the wall mosaics of Sant' Apollinare Nuovo.²³ In the lunette above the palace portal which is represented in mosaic on the walls of the nave, Christ, carrying a cross in His right hand and a book in His left hand, stands on the head of a long serpent; on either side of Him is a single apostle. This early sixth century representation is remarkably close to the Coptic examples. It is to be noted that the two apostles who appear in the Ravenna mosaic also occur in the Alexandrian fresco. In Merovingian times the type of Christ standing on the single serpent appears to have been introduced, not necessarily through Ravenna, into Gaul. In a cemetery of Orléans (Fig. 140) there was discovered

FIG. 140. FRAGMENT OF TERRA COTTA VASE
DISCOVERED AT ORLÉANS. CHRIST TRIUMPHANT.

a fragment of vase on which is represented the figure of Christ carrying a cross and standing on the head of a serpent.²⁴ The composition of the scene is curiously analogous to the examples from Akmim and Carthage.

²¹ Strzygowski, *Koptische Kunst*, p. 248, no. 7142.

²² Forrer, *op. cit.*, pl. XVIII/1.

²³ Alinari, no. 18238; Julius Kurth, *Die Mosaiken der christlichen Ara*, p. 177, mentions the scene but apparently fails to understand its meaning; he writes that three figures are represented having an adventure with a snake, a reptile which was frequently seen in the woods around Ravenna.

²⁴ Garr., *op. cit.*, VI, pl. 466/2; *Revue archéologique*, XV, 1867, p. 376.

Christ on the vase wears an Egyptian coiffure and a Gallic sagum²⁵ and carries a kind of cross similar to those on the African lamps, while the serpent coils around the feet of the Saviour in a manner identical with that of the Coptic representations. Many of the monks, hermits, and ecclesiastics of Gaul were trained in the monasteries of Upper Egypt and the monastic system of the country was at first based on the Egyptian rule, so that it is not in the least surprising to find this Egyptian type in a Gallic town. In fact, it offers a parallel for the later introduction into Gaul of the developed type of the scene such as was seen in the Alexandrian fresco.

Before turning to the introduction of the developed type into Carolingian art another variation in the manner of representing Christ Triumphant over the beasts should be considered. Instead of depicting the Saviour standing on the four beasts or upon the single serpent, this method, which is first seen in Ravenna, shows Him, cross in hand, trampling upon the necks of a lion and a dragon. This type, if it was not brought to Ravenna from Egypt as the other form of the scene must have been, was

FIG. 141. RAVENNA: S. FRANCESCO, PIGNATTA
SARCOPHAGUS, DETAIL. CHRIST TRIUMPHANT.

surely developed there under direct Egyptian influence for, after all, there is little difference between it and the example of the scene in the Alexandrian fresco. Christ trampling on the lion and the dragon occurs in the fifth century at Ravenna in a stucco relief of the Catholic Baptistry where Christ curiously enough is represented wearing an Egyptian coiffure.²⁶ Of the same order is the scene on the Pignatta sarcophagus (Fig. 141)

²⁵ Leclercq, *op. cit.*, col. 513.

²⁶ Garr., *op. cit.*, VI, pl. 406/4. From Dr. Shapley, of Brown University, who is making a study of the monuments of Ravenna, I learn that Christ carries a cross in His right hand.

at Ravenna where Christ, with an apostle on either side, is seated upon a raised throne resting His feet upon the heads of a lion and a dragon.²⁷ In Merovingian times the type is found on a wooden pail from a sepulchre at Miannay, near Abbeville.²⁸

So far, the review of the early examples of Christ trampling on the beasts has shown that the monuments on which the scene occurs were of Egyptian or Western origin. In other words, the scene, having originated in Egypt, did not pass into Byzantine art, but at an early date was transmitted to Ravenna and later to Gaul. When the representations of the scene which were executed after the seventh century are considered it will be apparent that the idea of depicting Christ treading on the evil beasts was also transmitted to Carolingian art and was characteristic of Frankish monuments. It is in regard to the use of the scene in Carolingian art that the question as to the date and execution of the same scene on the Bodleian book cover arises.

A summary, however, of the late examples of the scene, which are all on either Carolingian, Frankish, or Ottonian monuments, prepares the way for showing the connection between the scene on the Bodleian cover and the early Carolingian representations. Also when the Carolingian renderings are compared with the representation in the catacombs of Alexandria it becomes more evident that the scene, as a type, must have been introduced directly from Egypt. In the eighth or ninth century the scene of Christ trampling on the four beasts occurs on a Carolingian ivory book cover in the Musée du Cinquantenaire at Brussels²⁹ and on the cover of the Lorsch Gospels (Fig. 142) in the Vatican.³⁰ Although this last example has been variously attributed to Byzantine and Italian as well as to Carolingian art, it is now admitted to be of Frankish origin.³¹

Besides these two ivory examples, a representation of Christ flanked by two angels and treading on the lion and the dragon appears in a miniature of the Gospels of the Duke of Arenberg (Brussels), a tenth century Anglo-Saxon manuscript.³² In the eleventh century the same scene occurs

on an ivory from the lower Rhine,⁸³ on the metal cover of the Gospels of Poussay,⁸⁴ and on the reliquary of Saint Hadelin at Visé.⁸⁵ In the twelfth century there is a representation in a missal of Hildesheim⁸⁶ and a French ivory in the South Kensington Museum depicts Christ trampling on the four beasts.⁸⁷ Although it is not possible that this list of examples of the scene is complete, it is singular that not a single late representation has been found either on an unquestioned Byzantine or an Italian monument and that the scene should have been so faithfully preserved in those regions whose art emanated from the Carolingian schools of miniature painters, who, as we know, drew largely from Oriental sources.

Turning to the representation on the Bodleian book cover (see Fig.

⁸³ Graeven, *Elfenbeinwerke*, series I, no. 30, in the Bargello at Florence.

169) we see within the central panel the figure of Christ depicted before a loggia. The Saviour is young, beardless, with long hair falling on His shoulders, and wears a cruciform nimbus. In His right hand He holds a cross which rests on His shoulder; His left hand bears an open book. With the right foot He treads upon the lion and with the

FIG. 143. BRUSSELS: MUSÉE DU CINQUANTENAIRE, IVORY BOOK COVER FROM GENOELS-ELDEREN. CHRIST TRIUMPHANT.

left upon the dragon while beneath the lion is the asp and beneath the dragon is the basilisk. On one side of the open book is inscribed the monogram $\begin{smallmatrix} \text{IHS} \\ \text{XPS} \end{smallmatrix}$ and on the other sheet are the first two words of the thirteenth verse of the ninety-first Psalm, $\begin{smallmatrix} \text{SUP(er)} \\ \text{ASP(idem)} \end{smallmatrix}$.

If this rendering is compared with the same scene on the Carolingian diptych of Genoels-Elderen at Brussels (Fig. 143) the similarity is apparent. In the first place both scenes are set within columns and the Saviour in each case shows the same traits and characteristics. More-

over, the Saviour on both ivories carries in identical fashion the same kind of a cross while He treads on the four beasts which are arranged in the same positions. In fact, the renderings are remarkably alike with the exception that Christ on the Brussels cover is flanked by two angels and that there is far greater animation, not only in the attitude but also in the draperies, of the Christ on the Bodleian cover.

This particular type of youthful, long haired Christ, seen on the two ivories, was peculiar to Carolingian art and primarily to the Godescalc school of miniaturists. It is the resemblance of the Christ type on the Genoels-Elderen diptych to the traditional rendering of Christ in the Godescalc and Ada manuscripts which, with other points of semblance, led Laurent to associate so successfully the Brussels ivory with that artistic centre in northern Gaul where the miniatures of the Godescalc school were painted.³⁸ The ivory, he points out, preserves in the scene of Christ Triumphant a type which originated in Egypt. This dependence on Eastern types is also characteristic of the Godescalc miniatures, since these, in much of their ornament and iconography, were based upon Eastern models similar to the Rabula and Etschmiadzin Gospels which Oriental traders, monks, and ecclesiastics, as well as pilgrims to the Holy Land, had been bringing into Gaul ever since the fifth century.³⁹ Therefore, if there exists so intimate a relation between the Genoels-Elderen diptych and the Godescalc school as there is an apparent relation between the Genoels-Elderen diptych and the Bodleian cover, there should be manifest certain analogies between the Bodleian cover and the Godescalc school. Comparing the Christ on the Bodleian cover with the Enthroned Christ on the Godescalc Gospels,⁴⁰ which were finished shortly after 781, it is evident that the type of Christ is the same. Notice should be taken of the fact that in the Godescalc miniature, behind the head of Christ, appears the same monogram IHS XPS which is inscribed on the book which Christ holds on the Bodleian cover. Carrying the comparison with the Godescalc school still further, the Christ on the ivory is very much like the same figure in the Soissons Gospels.⁴¹ In this early ninth century

³⁸ Laurent, *op. cit.*, p. 39.

³⁹ See *Orientalizing of Gaul*, Part II, section II, of this volume.

⁴⁰ Michel, *Histoire de l'art chrétien*, I, fig. 166.

⁴¹ Laurent, *op. cit.*, pl. IV. This similarity of the Christ on the Bodleian ivory with the type of the Godescalc manuscripts is shown by another miniature in the Soissons Gospels (R. de Lasteyrie, *L'architecture religieuse en France à l'époque romane*, 1911, fig. 181). The similarity extends even to the cross which Christ carries in His right hand, the open book in His left hand, and to the agitated folds of His draperies.

manuscript the drapery has that nervous, sharp edged character which is apparent on the Bodleian cover.

Nervous drapery, which appears to have been ironed stiff at the moment when it was fluttering most violently, was one of the most characteristic features of many of the Carolingian and Ottonian schools of art. As the artists sought to give greater life and vigor to their figures, the animated drapery became more and more pronounced until in some of the late schools, as the Anglo-Saxon, the exaggeration became the principal characteristic of the style. This pronounced animation appears in the scene of Christ Triumphant in the tenth century Anglo-Saxon Gospels of Arenberg. Although more animated than the drapery in the Godescalc Gospels themselves, the drapery of Christ on the Bodleian ivory is not as nervous as in this Anglo-Saxon example and is closest to the type of drapery seen in miniatures of the Godescalc and Ada manuscripts. Besides the marked similarity with the Christ of the Soissons Gospels, the animated folds of Christ's costume on the ivory recall the drapery of the Evangelist in the *Codex Aureus* (Harleian, 2788) of the British Museum,⁴² which is another manuscript of the Godescalc group. It is significant that the same technique, though more fully developed and more beautifully executed, occurs on the Carolingian ivory in the Vatican which also represents Christ Triumphant. This diptych leaf came from the monastery of Lorsch to the Vatican as the cover of the Gospels of Lorsch, which also belongs to the Godescalc group of manuscripts.⁴³

It is remarkable that the three similar representations of Christ trampling on the lion and the dragon, the asp and the basilisk should all present the same type and, at the same time, should each one bear some resemblance or relation to the miniatures of the Godescalc school. The scene on the Bodleian cover, irrespective of the other scenes, from this analogy with the Godescalc miniatures and its similarity to the Genoels-Elderen diptych, would appear to date the ivory at the end of the eighth century or at the beginning of the ninth century and would place its execution somewhere in the north of France. Whether the cover was actually done at this time or was a prototype for the Carolingian scenes, as those who date the cover early must assume, is a question answered elsewhere in my discussion of the iconography and style of the rest of the Bodleian ivory (p. 254).

XIX

SUMMARY OF THE SCHOOLS OF EARLY CHRISTIAN ART

Although unable to assert that early Christian iconography was an exact science, governed by consistent rules of composition, even in the sense that Byzantine iconography of the eleventh century approached the exactitude of a science in its formulae of representation, I feel that the preceding pages have justified an iconographic classification of the early Christian schools of art. In the case of each Biblical scene that has been studied the same monuments, as the varying methods of representation on them were allowed to divide into groups, fell within approximately the same classification and logically grouped themselves around a few monuments of known provenience in the separate schools. Before closing, then, this study of early Christian methods of Biblical representation, it may prove valuable to gather together the results and in a brief summary to view the iconography of each individual school as a whole.

The Hellenistic, the Oriental-Hellenistic, the Provençal, the Alexandrian-Coptic, the Palestinian-Coptic, the Syrian and the proto-Byzantine schools, into which I have divided the Christian art of the first seven centuries of this era, are from necessity rather broadly inclusive and incapable of being exactly bounded and limited. They are in most cases not so much schools as sets of types which were popular in or emanated from certain regions during certain centuries. Yet in such cases as the Provençal and the Alexandrian-Coptic they represent very specific schools and as schools, in which the area of artistic activity was somewhat limited and consistent, it is perhaps permissible to treat them all.

The Hellenistic type, as characteristic of what we may loosely call a Hellenistic school, is by far the most difficult to define. Since it is exclusively the Hellenistic type that appears in the catacomb frescoes and on the sarcophagi of Rome, it is commonly recognized as a Western type and as evidence of a Western school. That, however, does not prove that it was of Western origin. When Christianity was born, an Eastern cult in an Eastern land, the civilized world was under classical domination; a neo-Greek veneer of manners, customs, literature, and art overspread the whole Mediterranean world and the new faith, seeking a means of expression in literature and art, found at hand only Hellenistic

models and types. At once it found that the rational, material character of classical art was hardly suitable for the expression of its new ideals. The artist could not render in stone or paint a comprehensible expression of the omnipotent power, the everlasting love, and the infinite grace of the Father; neither could he so much as sketch the soul, which was fundamental to the Christian faith, nor adequately express the necessarily indefinite blessings of the hereafter where the weary soul would find peace. Even the spirituality of the Saviour evaded the concise and material limitations of the sculptor's chisel, while to portray Eternal Salvation, which above all others was the appealing promise that awoke the fettered imagination of a pagan world to new hope, the artist had at his command only the expressive forms of flesh and blood, of a rational and material world, from which his dominant idea was to escape.

Realizing the value and the necessity of the pictorial image to stir the imagination of the uneducated and simple masses, the theologians turned to symbolism. As the theological writers, especially of the Neoplatonic school, adopted the Hellenistic figures of speech and even the classical philosophy and, by allegory and analogy, sought to harmonize them with the new faith, so the artists, under the direction of the theologians, accepted the models of Hellenistic art and, through a symbolism that was carefully simplified, explained, and stylized, portrayed the otherwise inexpressible ideals and yearnings of the new religion. Thus the young Orpheus, seated, harp in hand, amid his flock, was first taken as the type of Christ, the Good Shepherd; the more common Hellenistic forms of decoration, as putti playing in the branches of the grapevine, were given a concise Christian significance and used to decorate the Christian edifices; and the classical banquet scene was chosen to symbolize the joys of the Christian Paradise. In the great Hellenistic cities of the Mediterranean, largely in Alexandria, Antioch, and Ephesus, which were the earliest theological centres of the new faith, a highly symbolical art was evolved, based in its forms on classical models.

As Christianity rapidly permeated the West, taking with it its newly acquired means of expression, the West, primarily concerned at the time with preserving and spreading the faith in the face of imperial opposition, readily accepted the new symbols, which by their simplicity and classical character could attract little attention from antagonistic pagan-

ism and could silently preach the Christian sermons to the masses of uneducated but devout converts. The Hellenistic type developed in the West; while it gradually abandoned the more obvious Hellenistic models and was constantly enriched, nevertheless, when Christianity at the beginning of the fourth century emerged from the catacombs to become a state religion, the Hellenistic form retained its highly symbolical character, remaining essentially simple in its composition, so as not to obscure the spiritual lesson by a too realistic rendering of the material event, and preserving also in a crude way the feeling for classical forms and drapery.

That time, wars, fires, and earthquakes, ravaging the great Hellenistic cities of the Orient, have completely destroyed nearly all the monuments of this early phase of Christian art in the East and that only in the Eternal City have the Hellenistic types been luckily preserved in frescoes and mosaics and on sarcophagi, has led to the old assumption that Hellenistic Christian art originated in Rome. Today the balance of judgment, regardless of the meagre evidence that remains, is inclining strongly toward the Orient. In reality Rome loses little; she adopted the Hellenistic types of Christian art and made them hers; she changed, enriched, and formalized them and hence made of them the products of a Roman school. At Rome the Hellenistic school flourished long after new fashions, Oriental rather than Hellenistic, had grown up in the East and were working westward again to supplant in time the school that for our purposes we may now call Western.

HELLENISTIC TYPES

The symbolic, dogmatic, and simple character of this school will appear in a review of the salient features of the iconographic types that have been studied in this volume and, of those scenes that appear in the frescoes and on the sarcophagi of Rome, the following are among the most common and significant:

*The Nativity.*¹

In some ways a misnomer, the Nativity in the Hellenistic type was not so much a representation of the Birth as it was a pictorial sermon confirming the universal worship that was accorded to the Saviour by the Jews, Gentiles, and natural world. Five groups appear within this

¹ See p. 14.

type: (1) the Adoration of the Ox and the Ass occurs, without any other elements in the composition, as symbolic of the worship of the natural world; (2) the shepherds are introduced into the previous composition and their theological significance, as typifying the Adoration of the Jews, is shown by the fact that the Child lies either upon the ground or on an altar; (3) the manger or crib is added and the scene is figured in the traditional Western shed with open sides and front; (4) the Virgin, sitting apart from the Child who lies in His crib, is introduced; (5) the three Magi, adoring the Child as He lies in His manger, or crib, are figured in the scene.

*The Adoration of the Magi.*²

The Magi in this type are beardless and, with the exception of a few early examples in the catacombs where they are arranged symmetrically on either side of the Virgin, they advance with their gifts in a line; the young Jesus, a child of two years, sits in the lap of the Virgin who is figured either in a three-quarters posture or in profile; as a rule Joseph is omitted.

*The Massacre of the Innocents.*³

The only example of this scene in the Hellenistic school occurs in the arch mosaics of Santa Maria Maggiore. The classical restraint of this period of art, when symbolism rather than realism governed the representation of scenes and prohibited the rendering of passion, is manifest in this representation; instead of depicting the actual massacre, as was the custom in the East, the Hellenistic artist represented the children as hopeful martyrs awaiting execution in their mothers' arms.

*The Baptism.*⁴

Essentially symbolic with the same significance in all communities, the Baptism shows a marked uniformity in all schools. In the Hellenistic type, however, Jesus is always beardless, is represented as a small child, and is never immersed in the water more than to His knees; John the Baptist is dressed in an exomis or perizoma in the catacombs and on the sarcophagi generally wears the pallium instead of the shepherd's garment; while not always depicted as such, the Jordan as a waterfall behind the Saviour is characteristic of this type.

² See p. 38.

³ See p. 60.

⁴ See p. 73.

*The Miracle of Cana.*⁵

Christ, never accompanied by more than one disciple, touches with His wand the jars of water which vary in number from one to seven. During the fourth and fifth centuries, this scene gained great theological importance in the West and, in combination with the Miracle of the Loaves and Fishes, became a symbol of the Eucharistic transubstantiation.

*The Healing of the Blind.*⁶

While not common enough in either the East or the West to show any strikingly distinct characteristics, the Hellenistic type depicts a single blind man, small of stature, as compared to Christ, and sometimes carrying a staff. It represents the Saviour either touching the blind man on the eyes or laying a hand on his head.

*The Healing of the Paralytic.*⁷

This scene of deliverance symbolized the Baptism and although common in the Hellenistic school it manifests no single and distinct type. In the catacomb frescoes the paralytic usually carries his bed upside down on his shoulders and Christ is omitted from the composition; on the sarcophagi the paralytic is always small, and stands in profile at the feet of Christ holding his bed with the legs hanging down his back.

*The Raising of Lazarus.*⁸

The Hellenistic group, appearing on Western monuments, subdivides into five variants of the general type. With the exception of the first and fifth variants, the uniform characteristics of the Hellenistic type show Christ touching with His wand the figure of Lazarus who, wrapped like a mummy, his head covered with a cloth, stands in the doorway of a little gabled aedicula set upon a podium. The sub-groups are characterized as follows: (1) in a few of the earliest examples Lazarus sometimes lies on the steps of the aedicula and is seldom represented as a mummy; (2) this group includes the majority of examples and shows only the uniform characteristics of the Hellenistic type as a whole; (3) one of the sisters of Lazarus, kneeling at the feet of Christ, is added to the composition; (4) the second sister, standing at the side of the Saviour, is introduced; (5) in a unique and highly symbolical type appearing only on the

⁵ See p. 85.⁶ See p. 95.⁷ See p. 103.⁸ See p. 109.

"Roman glass," Lazarus, wrapped like a mummy with his head bare, leans against a kind of foliate growth.

*The Entry into Jerusalem.*⁹

The distinguishing feature of the Hellenistic type is the manner of representing Christ riding astride instead of sidewise. As in all the Western types, only the actual essentials of the scene are figured: as a rule the disciples who accompanied Christ are reduced to one; the city, and the multitude who came forth, bearing palms to greet the Saviour, are omitted; and the whole acclamation of Christ as King is symbolized by the single figure of a youth plucking palm branches in the top of a tree and by a man who spreads his mantle beneath the feet of the ass.

*The Last Supper.*¹⁰

It does not exist in the Hellenistic school. As there was no significance in the Last Supper to the early Christians save as it symbolized the Eucharistic Transubstantiation, which was commonly represented by the Multiplication of the Loaves and the Fishes, the scene does not occur in the West until Eastern influence gave it an historical value.

* * *

The Oriental-Hellenistic scenes do not mark the existence of a school. They represent only the first breaking down of the symbolic Hellenistic types, due to the gradual dissolution of Hellenistic influence in the East and the resultant tendency of the Orient, from the end of the fourth century, to assert in art its indigenous and racial characteristics. While this assertion of Oriental tendencies commenced at the close of the fourth century, it was not until the beginning of the sixth century that clearly distinguishable Eastern schools appeared in the Eastern provinces of the Roman Empire. In the interim between the end of the fourth century and the opening of the sixth century, the transition was gradual; no sharp lines of demarcation are apparent, for art still continued to follow Hellenistic models. The first suggestion of approaching change appears in the Oriental cast that is given to what would otherwise be traditional Hellenistic types. These types, slightly modified by compositional details, which are later to be characteristic of Eastern types, make up the group that I have called Oriental-Hellenistic.

As the process of Orientalizing the Hellenistic Christian art in the East

⁹ See p. 123.

¹⁰ See p. 129.

developed more slowly in some localities and artistic forms than in others where the Hellenistic traditions persisted with less tenacity, the presence of Oriental-Hellenistic types offers no criterion for date or even for provenience. They only signify a development that was going on in Christian art under Eastern influences. In fact, certain monuments preserve these types as late as the seventh century, although as a rule the types are characteristic of the fifth century. In the fifth century the doors of Santa Sabina at Rome show in certain Oriental-Hellenistic types the change that was taking place, while in the sixth or seventh century these renderings are almost consistently continued on a gold encolpium in the Museum at Constantinople. The noticeable iconographic isolation of many of the marginal miniatures of the Rabula Gospels denotes this same attempt to Orientalize Hellenistic types. Unlike the full page miniatures of these Gospels, which are known to have been written in 586 A. D. at the Syrian monastery of Zagba, the iconography of the marginal miniatures does not adhere to any one type; while the full page scenes are obviously Eastern in iconography and show certain affinities with Byzantine art,¹¹ the marginal scenes present both Eastern and Oriental-Hellenistic types. In the Healing of the Paralytic the rendering reverts to the old catacomb method and depicts the paralytic carrying his bed upside down on his back; the scene of the Nativity, while different from the recognized Hellenistic type in the West, especially in the absence from the composition of the ox and the ass, is not wholly Oriental, since the Virgin does not recline in Eastern fashion on a mattress; and yet the representations of the Baptism, the Miracle of Cana, the Samaritan Woman at the Well, and the Massacre of the Innocents are Eastern types, while the Healing of the Blind and the liturgical rendering of the Communion are related to proto-Byzantine types in the Rossano Gospels. This mingling of types and preservation of Hellenistic details of iconography in so famous a monument as the Rabula Gospels, shows how gradual and almost organic was the growth of Eastern iconography.

ORIENTAL-HELLENISTIC TYPES

The types which I have classified as Oriental-Hellenistic are the following:

¹¹ It is possible that the full page miniatures are later than the marginal miniatures in the text (Reil, *Bildzyklen des Lebens Jesu*, p. 78).

*The Nativity.*¹²

All Eastern representations of the Nativity are distinguished from the Hellenistic type in the West by the absence of the manger shed. The earliest and briefest example of the Oriental-Hellenistic Nativity is found on a marble relief of Naxos of the third or fourth century. On two late encolpia, one in the Museum at Constantinople and the other in Reggio, and a gold medallion from Akmim the scene takes place in the open according to the Eastern manner, although, after one of the common Hellenistic methods of representation, the Virgin and Joseph are still omitted and only the Adoration of the animals and the shepherds is figured. The most developed type is found on the Strzygowski medallion (p. 23) with its addition of the figure of Joseph.

*The Adoration of the Magi.*¹³

The main distinction between the Adoration scenes of the East and the West is the aspect of the Magi, who in the West are beardless, while on Eastern monuments they are either all bearded or are differentiated in age, the first Magus being heavily bearded, the second lightly, and the last beardless. On several encolpia and ivories, including the encolpium at Constantinople, the Adoration, with the exception of the three bearded Magi, follows the Hellenistic type in that it does not include Joseph in the composition and represents the Magi advancing in a line.

*The Miracle of Cana.*¹⁴

In the case of this scene the Alexandrian-Coptic type, where one servant, pouring the water into the jars, is added to the Hellenistic type, is really an Oriental-Hellenistic type although it became one of the traditional types in Coptic art.

*The Healing of the Blind.*¹⁵

Without any changes the Hellenistic type, where Christ usually touches the eyes of the blind man, who is small in stature and sometimes carries a staff, occurs on the encolpium in Constantinople, and also on the Brescia casket and a pyxis at Bologna, both of which are attributed to Eastern sources.

¹² See p. 22.¹³ See p. 47.¹⁴ See p. 88.¹⁵ See p. 97.

*The Healing of the Paralytic.*¹⁶

Again the Hellenistic type common on the catacomb walls and sarcophagi of Rome occurs in a few Eastern examples, as the Rabula Gospels and the Constantinople encolpium, and on the Bologna pyxis to which has been attributed an Alexandrian origin.

*The Raising of Lazarus.*¹⁷

The Oriental-Hellenistic type of this scene is only distinguished from the Hellenistic by minor changes of detail which differ in the various examples. The one feature that differentiates the scene on the Brescia casket from the Hellenistic type is the bare head of Lazarus; on reliefs found in Phrygia and Sbeitla (Tunisie), and on two sarcophagi of the fourth century at Ravenna we find, instead of the regular Hellenistic aedicula, a tomb of which the façade, with an arched lintel, is represented in strict frontality; on a relief of Constantinople the only variation from the regular type is the fact that the Hellenistic aedicula is depicted in frontality after the Eastern manner of representation.

* * *

The résumé at this point should include a summary of the iconographic features of the Provençal school which in its blending of Hellenistic types and Oriental influences represents the same transitional tendency in Christian art which formulated the Oriental-Hellenistic types. As the second part of this volume is devoted to a study of the Provençal school, to save unnecessary repetition I will pass directly to an Oriental school, the Alexandrian-Coptic.

The Alexandrian-Coptic school, in its beginnings, represents a localized and specific manifestation of a transitional phase again analogous to, though more pronouncedly Oriental than, the Oriental-Hellenistic. The designation of the school at once announces its Alexandrian origin and its subsequent continuation in the indigenous art of Upper Egypt. I have already referred to the theory, first advanced by Ainaloff, that Alexandria was the great centre of the East where the Hellenistic types and motives of Christian art were formulated, given their specific symbolic meaning, and transmitted to Rome to eventually become the basis of a Western school of Christian art.

While not everywhere accepted, such a theory is reasonable and very

¹⁶ See p. 104.

¹⁷ See p. 114.

probable. Rich in a flourishing commerce which brought her tribute from all the shores of the Mediterranean and even from the distant lands of the East, Alexandria, even in Christian times, was famous for the magnificence of her edifices, the profusion and picturesqueness of her art, and the wealth of her learning; to her unsurpassed library she owed a great school of erudition and a prodigious literary activity; and up to the time that the Arabs captured the city she was a veritable centre of Hellenistic culture. With the advent of Christianity and from the end of the second century, with Clement, to the third century, with Origen and the Neoplatonists, she was a formative source of Patristic theology. There the Christian theologians, still inspired by Greek models and classic philosophy, sought to harmonize the spiritual infinitudes of Christianity with the rational philosophy of the ancients and to seek through allegory a revelation of the New Testament in the prophecies of the Old. Hence in Christian literature and philosophy there grew up in Alexandria a school of theology founded on mysticism, allegory, and symbolism which boldly adopted Hellenistic models only to imbue them with Christian meaning. Certainly no better soil could be found to which to attribute the incubation of Hellenistic Christian art, which in its turn is also an adaptation of Hellenistic models made serviceable to the needs of Christianity by the intricate symbolism read into their classic forms.

Through the first part of the fourth century the rôle of Alexandria continued to become more celebrated. There Arianism was born; thence, from the reaction against Nestorianism, the Monophysite heresy spread throughout the Oriental world. By the beginning of the fifth century, however, Christianity developed as a manifestation of national spirit and the heresies were largely a form of separation—a violent reaction against Roman domination and hence against Hellenism, as the imposed culture of another civilization.

From time immemorial tradition was the dominant factor in the development, or rather sterilized preservation, of Egyptian art. While Alexandria could flourish, for a time, as the capital of Hellenism and could even spread the culture and art of the Greeks across the soil of the Pharaohs, the veneer was thin and the heart of the country remained inherently Egyptian, unalterably imbued with the ancient traditions of the land. When Christianity triumphed and spread up the valley of the Nile, it was accepted as a sign of the renaissance of national tendencies

and aspirations and spread as a reaction, and finally almost as a revolt, against Hellenistic domination. During the closing years of the fourth and the beginning of the fifth century this reaction actually broke forth; the destruction of the Serapeum, the death of Hypatia, and the violent leadership of the nationalists under Schnoudi, bear witness to the hostility of the new faith to Hellenism.

With this awakening of national feeling, the centre of Christian art passed from Alexandria to the monastic communities of Upper Egypt and the old traditions of Pharaonic art reasserted themselves in the pictorial representations of Christianity. Originality, however, was never a characteristic of Egyptian art. The creative faculty had long since succumbed to the tyranny of immutable tradition. The native art offered few acceptable forms when pressed by the necessity of finding expression for Christian ideals. It was only the spirit of the old art that was revived in the new. Above all else, it was the inherent, non-artistic attitude of mind of the Egyptian, still continuing to view pictorial form not as art but as cold and lifeless hieroglyphs—satisfactory if expressive—that gave to the native Coptic art of Upper Egypt its character. Under this non-artistic tradition all classical beauty of form was abandoned and all pride in execution was lost. Coptic art became coarse, crude, and sketchy in technique; it forsook the freedom and naturalness of the Hellenistic rendering of the human figure and reverted to the old habits of frontality and the static rigidity of Nilotic prototypes. Like Pharaonic art before it, Coptic art became conventional and stylized, a mere backwater in the history of artistic development.

Sterile and more hieroglyphic than artistic, this Coptic art could originate little and find less in its native monuments to use for Christian expression. It therefore had many ties with the classic Christian art of Alexandria. The ornament and style of Christian art in the Hellenistic capital, although it became more and more debased and Oriental under the introduction of Syrian motives and ideas, remained neo-classic until the sixth century, when the artistic activity passed up the Nile to such monastic centres as Bawit, el Bagawat, and Sakkara. During the transition, especially in the sixth century, Coptic art began by adopting the Hellenistic ornamental forms and ignorantly copying the style. Both ornament and style, however, were soon coarsened and conventionalized and the ornament enriched by native motives. In the seventh century,

when the last vestige of Hellenistic style had almost disappeared and the ornament had been stylized beyond recognition, the iconography originally emanating from Alexandria persisted still. Although Coptic art originated a few types and drew others from Palestinian sources, as I will show in the discussion of the Palestinian-Coptic school, by far the greater part of the Alexandrian iconographic types were continued and, with native veneration for the hieroglyphic form, were conventionalized and so preserved in Coptic art.

The most important and the most prominent monument in this dissemination of Alexandrian types was the Maximianus chair. The Egyptian origin of the cathedra, which has been generally accepted and the iconographic proofs of which I have already published,¹⁸ is chiefly demonstrated by the fact that practically every iconographic type occurring on the chair appears at a later date on assured Coptic monuments. It is further established by the nature of these types which in many cases may be shown to have been of Egyptian origin or peculiar to Egyptian art. Moreover, in the costumes of the soldiers, in the treatment of the hair, in decoration, and in style, the cathedra is analogous to frescoes at Bawit, to the Barberini diptych, the St. Menas pyxis in the British Museum, and numerous ivory and wood carvings from Egypt in the Cairo, Berlin, and Paris Museums. Its Alexandrian origin, once its connection with Egypt is established, becomes certain. The beauty and superior character of its execution, the reminiscences in many of its scenes of classical motives and types, the similarity that its ornament, style, and technique bear to ivory fragments from Alexandria, and the Hellenistic, transitional character of its iconography, all point to its execution at Alexandria, the mother of Hellenistic Christian art and the great centre of the ivory trade of the Orient.

Accepting the sixth century as the customary date assigned to the cathedra, although it might have been carved as early as the end of the fifth century, the Maximianus chair is to be considered the earliest and the most pretentious monument of a group of ivories which are intimately related to it in style and iconography. While a large number of ivories may be said to be of the same school as the chair,¹⁹ the ivory book covers of the Etschmiadzin Gospels, two covers in the Bibliothèque Nationale at Paris, and a carved wooden lintel from the church of el Mu'allaka near

¹⁸ In *American Journal of Archaeology*, 1917, pp. 22-37.

¹⁹ Dalton, *Byzantine Art and Archaeology*, pp. 207-209.

Cairo are most closely connected with it.²⁰ Clearly based upon the iconography of the cathedra, these examples of sixth century art are more transitional in style, less Hellenistic in execution, and hence a little later in date. From this group the iconography, soon to lose all Hellenistic style and technique, passed to Upper Egypt and was continued in the frescoes of Antinoë and Bawit, on the Coptic ivories of the Murano book

FIG. 144. RAVENNA: MUSEUM, IVORY PANEL OF CHAIR OF MAXIMIANUS. THE ANNUNCIATION.

cover group, and on the medallions, fabrics, vestments, lamps, and other minor objects from the Thebaïd.

ALEXANDRIAN-COPTIC TYPES

The salient features of these iconographic types of the Alexandrian-Coptic school are the following:

The Annunciation.

The Annunciation (Fig. 144), as it occurs on the chair of Max-

²⁰ Leclercq in Cabrol's *Dictionnaire d'archéologie chrétienne et de liturgie*, s. v. "Caire," fig. 1853.

imianus, the ivory covers of the Etschmiadzin Gospels and the book covers in the Bibliothèque Nationale, depicts an angel accosting the Virgin, who sits at the left of the composition in a *wicker chair* spinning the purple veil for the temple. All these examples are nearly identical and the Virgin, with her spinning, seated in a high backed, round topped, wicker chair is the distinguishing feature of the type. This type, with the exception of the examples already cited, occurs only on monuments whose Coptic origin is assured. These Coptic monuments are a fragment of the Murano book covers in the Stroganoff Collection²¹ (Fig. 145), an

FIG. 145. ROME: STROGANOFF COLLECTION, IVORY PANEL FROM MURANO BOOK COVERS. THE ANNUNCIATION.

ivory plaque in the Uwaroff Collection,²² a medallion from Egypt in the Gans Collection at Berlin²³ (Fig. 146), a Coptic textile in the Victoria and Albert Museum,²⁴ and a fresco at Bawit.²⁵ On all, save the

²⁴ Dalton, *op. cit.*, fig. 381.

²⁵ Clédât, *Comptes Rendus*, 1904, p. 525.

Stroganoff fragment, the angel carries a cross instead of a flowering wand. The presence of the cross, either borne by angels or by the Saviour in miracle scenes, is an Egyptian feature. Comparing the Annunciation in Syrian and Palestinian examples, one finds on the Monza phials (Fig. 147), in the miniatures of the Etschmiadzin Gospels,²⁶ in the Rabula Gospels,²⁷ and in a Syrian miniature of the Bibliothèque Nationale at Paris (syr. 33) that the Virgin *stands* as the angel of the Lord accosts her, that the odd wicker chair seen on the Maximianus chair does not occur, and that the Virgin and the angel wear each a nimbus.

The Test of the Virgin by Water.

This scene, which occurs on the chair (Fig. 148) and the related book covers, is in itself an Egyptian type, for it was a rare scene in early Chris-

FIG. 148. RAVENNA: MUSEUM, IVORY PANEL OF CHAIR OF MAXIMIANUS. THE TESTING OF THE VIRGIN.

tian art and, save for these examples, occurs only on the Uwaroff ivory and the fragment of the Murano covers in the Stroganoff Collection (Fig. 149).

Joseph Assured By An Angel.

While occurring on a sarcophagus of Le Puy (see Fig. 154) and on the Werden casket in the Victoria and Albert Museum (see Fig. 157)

²⁶ Strzygowski, *Byz. Denk.*, I, pl. V/2.

²⁷ Garr., *op. cit.*, III, pl. 130/1.

which I have attributed to Provence,²⁸ a region whose relations with Egypt will be pointed out,²⁹ this scene was even rarer than the Test by Water and may also be called Alexandrian-Coptic. The only other examples known to me, on the Maximianus Chair (Fig. 150) and in the frescoes at Antinoë³⁰ (Fig. 151), are strikingly analogous.

The Journey to Bethlehem.

This scene, besides appearing on the cathedra, the book covers, and a pyxis from Minden in the Berlin Museum (Fig. 152), that belongs to the Maximianus group, also occurs on the Stroganoff fragment of the Murano covers and in the frescoes of the church of Deir Abou Hennys

FIG. 149. ROME: STROGANOFF COLLECTION, IVORY PANEL FROM MURANO BOOK COVER. THE TESTING OF THE VIRGIN.

at Antinoë (Fig. 151). The similarity of these last two Coptic examples, in which Joseph supports the pregnant Virgin on the animal that an angel leads, is too close to the rendering on the chair and too rare a scene in Christian art not to suggest that it originated in Egypt, preferably in Alexandria, whence it passed to become a characteristic type in Coptic art.

*The Nativity.*³¹

The Alexandrian-Coptic type of the Nativity which occurs on the chair is characterized by the introduction of the doubting midwife Salome into what would otherwise be a general Oriental type. The Christ Child, wrapped like a mummy, lies on a stone or brick crib as in the Provençal Nativities, and the ox and the ass adore Him; on one side stands Joseph and on the other Mary reclines on a mattress; either in front of the crib

²⁸ See p. 221 sq.

²⁹ See p. 192 sq.

³⁰ Leclercq, *op. cit.*, s. v. "Ane," col. 2058, fig. 599.

³¹ See p. 23.

or before Mary, kneels Salome, extending her withered arm in supplication to the Virgin. This distinctive rendering, whose Egyptian origin has been shown from the Coptic emphasis on Salome in the apocryphal literature of the country, occurs not only on several Coptic pyxides but also in the frescoes at Bawit and on the Manchester fragment of the Murano book covers.

*The Adoration of the Magi.*³²

The salient feature of the type is the introduction of an angel, carrying a wand, who points out the Christ Child to the Magi. These adoring Magi advance in a line and, after the method on all Eastern representations, are differentiated one from another by their beards. Their costume,

FIG. 150. RAVENNA: MUSEUM, IVORY PANEL OF CHAIR OF MAXIMIANUS. THE ANGEL APPEARING TO JOSEPH AND THE JOURNEY TO BETHLEHEM.

with heavy bands of embroidery running down the sleeves of their blouses and their long trousers, is characteristic of the type and peculiar to Egypt. The Virgin sits in a three-quarter pose in a high backed, round topped, wicker chair, similar to the chair seen in the Annunciation. While this type, which appears on the Maximianus Chair and the Etschmiadzin covers, occurs on two Coptic textiles and a medallion from Egypt, it was not common in the native art, as the more Oriental type of the Adoration from Palestine was adopted on most of the Coptic monuments.

³² See p. 48.

*The Massacre of the Innocents.*⁸³

This scene as it appeared on the Maximianus chair and later in the frescoes at Antinoë and Bawit was the characteristic "sword type" of the Orient.

*The Baptism.*⁸⁴

The distinguishing feature of the type is the introduction of the personified Jordan as a fleeing river god, although the presence of one or more angels as attendants is also characteristic. On the Maximianus Chair and an Alexandrian ivory in the British Museum, Christ is small and beardless but in the representation in the Bawit frescoes he is bearded after the Syro-Palestinian type.

*The Miracle of Cana.*⁸⁵

This is a "transitional type" where a single servant, pouring the water into the six jars, is added to the old Hellenistic type in which Christ,

FIG. 151. ANTINOË: FRESCO. THE ANGEL APPEARING TO JOSEPH AND THE JOURNEY TO BETHLEHEM.

as a magician, touches the jars with His wand. Besides occurring on the Maximianus chair, this semi-historical type appears on the Gans medallion from Egypt.

*The Healing of the Blind.*⁸⁶

This is simply a continuation of the Hellenistic type, with the added feature of the Coptic cross which Christ carries in miracle scenes; it appears in both the group which imitated the style of the Maximianus chair, and that which is connected with the book cover from Murano.

⁸³ See p. 62.

⁸⁴ See p. 79.

⁸⁵ See p. 88.

⁸⁶ See p. 98.

*The Raising of Lazarus.*³⁷

Again the rendering does not differ materially from the Hellenistic type save in the added feature of the cross that Christ carries. While this type occurs on a few Egyptian examples besides the Maximianus chair and the book covers, there was another and more clearly Coptic type that was popular in Upper Egypt and will be described under the Palestinian-Coptic school.

*The Entry into Jerusalem.*³⁸

The type differs from all other renderings in the *long carpet* which is unrolled, instead of a mantle, in the pathway of the Saviour. The Eastern character of the scene is shown in the sidewise manner in which Christ rides on the ass, while the representations of the Maximianus group and the carved lintel from the church of el Mu'allaka near Cairo, are

FIG. 152. BERLIN: MUSEUM, IVORY
PYXIS FROM MINDEN. THE JOURNEY
TO BETHLEHEM.

bound together by the odd, high stepping movement of the ass. In the scenes on the Maximianus chair and the Etschmiadzin covers Christ carries a cross, the Egyptian symbol of divinity.

* * *

In the general reassertion of national tendencies and the awakening of Oriental ideas that followed the triumph of Christianity and the gradual dissolution of Hellenism, Syria and especially Palestine were centres as influential in the formation of Orientalized Christian art as they were in the evolution of the Christian faith, its forms, liturgies, and literature. As the Syrian Church separated more and more from the Western Church, as new feasts were observed, and, after the Council of Ephesus in 431,

³⁷ See p. 117.

³⁸ See p. 126.

as the worship of the Virgin became authorized and universal throughout the eastern shores of the Mediterranean, Christianity in Syria rapidly acquired an indigenous character. Heresies sprang up and the Oriental aversion to the impersonality of the Hellenized forms of Christianity gave rise to a large body of literature that afforded a narrative and personal account of the miracles and lives of the Virgin and Christ. The formation of new feasts and liturgies, the creation of quasi-historical stories about the Biblical characters, and, above all, the reaction against the cold impersonality of Hellenistic symbolism, developed new types in art. New scenes arose around the feasts and liturgies, from the apocryphal gospels came a more narrative art wherein the miracles and events in the life of the Saviour were less symbolically and more picturesquely represented and the Virgin received a more important rôle. In place of the impersonal Christ, the young and unbearded Hellenistic type, was substituted an historical and mature representation of the Saviour, with bearded face in the Passion scenes or those symbolic of divinity; the apostles were more carefully characterized; and the Virgin was universally conceived as a woman of sorrowful maturity with a long face and a heavy veil.

The new spirit animating Christianity not only manifested itself in the gospel miniatures, which are exemplified for us in the Etschmiadzin Gospels, but also found monumental expression in the mosaics and frescoes that decorated the celebrated sanctuaries erected by Constantine in Palestine. Christian piety drew the devout in throngs from all parts of the Christian world to these holy places so intimately associated with the memory of the Saviour. At the hands of these returning pilgrims and by means of reliquaries, ampullae filled with holy oil, and other minor objects of the cult which were sold at the shrines and apparently decorated with more or less faithful copies of the scenes in the sanctuaries, the compositions of the mosaics and frescoes of the Holy Land were spread throughout the East and subsequently into the West. Thus the themes of the Nativity and the Adoration in the basilica at Bethlehem, the Ascension in the church on the Mount of Olives, the Pentecost in the church of Zion, and the Anastasis in the apse of the Martyrion, all of which are now destroyed and known to us only by the copies on the Monza ampullae and other minor objects of Palestinian origin, were developed into sacred and traditional types.

While the tendency of Oriental Christian art was narrative, historical rather than highly symbolic, and personal rather than impersonal, this Palestinian iconography, partly due to its dependence on the large mosaic compositions and in part to the reawakened Eastern tendencies in art, soon became stylized and took on a highly symmetrical, static, and strictly frontal character that was often monumental and hieratic. It was this monumental style which passed with the iconography into other localities.

The relations between Palestine and Egypt were intimate. From Syria devout Christians penetrated to Upper Egypt where they sought refuge in the monasteries and studied the cenobite system before spreading into remote countries to found new monasteries. From Egypt came an endless procession of pilgrims to the shrines of the Holy Land where they did reverence before the monuments and then returned to their monastic refuges in the Thebaïd. Thus there was a constant interchange between Palestinian art and the monastic art of Upper Egypt, which we call Coptic, and many of the monumental types of iconography seen in the mosaics of Bethlehem and the more narrative and apocryphal types seen in Syrian miniatures were introduced into Coptic art. Whether the frontal, symmetrical, and monumental character of many of these scenes, which were common both to Palestine and Egypt, was drawn entirely from the monumental types of the churches of the Holy Land or whether there was also a reversion to native, Nilotic methods of representation in Egypt which influenced the Palestinian compositions, we can not say. It is interesting, however, to note that the scenes in Coptic art which revert to strict frontality, rigid and symmetrical composition, and a monumental style, are those scenes which I call Palestinian-Coptic, and which in general show the influence of the Holy Land.

PALESTINIAN-COPTIC TYPES

The following types may be characterized as Palestinian-Coptic:

*The Nativity.*³⁹

The Birth, with the adoring ox and ass and the star hovering above the Child in His crib, is figured *in the open*; the Virgin lies, in the Eastern manner, on a mattress, and Joseph is usually figured seated at her side. This type, which is supposed to have decorated the walls of the Church

³⁹ See p. 29.

of the Nativity at Bethlehem, appears on the Monza phials of Palestinian origin and on the Golenisheff panel and a Coptic tapestry from Egypt.

*The Adoration of the Magi.*⁴⁰

The dominant features of this type are the monumental character of the composition, its symmetry, and the frontality of the figures. The Virgin, instead of being represented in profile or in a three-quarters pose, is in strict frontality and the Magi are arranged symmetrically on either side, the two Magi on one side being balanced by a Magus and an angel on the other or the scene of the Adoration by the calling of the shepherds. The Magi are invariably differentiated by their beards.

*The Baptism.*⁴¹

Aside from the absence in the composition of the personified Jordan, the only feature that distinguishes this type from the Alexandrian-Coptic is the consistent use of the nimbus on all the figures, a characteristic detail in all Palestinian scenes. In the Rabula Gospels from Syria and the Golenisheff panel from Egypt the Saviour is bearded, which is a Syrian feature.

*The Miracle of Cana.*⁴²

This type manifests the narrative tendency in Eastern art. The Virgin and two servants pouring the water are introduced, the number of jars is always six, and the disciple is omitted. The type appears in Syria in the miniatures of the Rabula Gospels and in Egypt in the frescoes at Antinoë.

*The Healing of the Paralytic.*⁴³

Inasmuch as there is an Alexandrian-Coptic type of this scene and yet the Murano book cover group from Egypt presents another type, wherein the paralytic is represented in profile looking back at Christ who carries the Coptic cross, I have classified the second rendering as Palestinian-Coptic, although there are no certain Palestinian examples of the scene.

*The Raising of Lazarus.*⁴⁴

The same is true of the Raising of Lazarus. There are no Palestinian examples of the scene and yet on the Murano book cover group there is

⁴⁰ See p. 51.

⁴³ See p. 106.

⁴¹ See p. 82.

⁴⁴ See p. 118.

⁴² See p. 92.

a marked type, strikingly different from the Alexandrian-Coptic. This rendering is distinguished from all others by Lazarus, his *head bare*, standing in the entrance of a frontal tomb façade with a *broken lintel* and by Christ carrying a cross instead of a wand.

*Entry into Jerusalem.*⁴⁵

There is little to distinguish this type from the regular Hellenistic type save that the Saviour rides sidewise, instead of astride, on the ass.

* * *

With the Palestinian-Coptic one would expect to discover a clearly distinguishable and influential Syrian school. The commercial activities of the Syrians, the wealth and originality of their architecture, and the importance of their theologians, justify such an expectation. The school no doubt existed, but in iconography it is not distinguishable; the monuments are too few in number and those that remain are too eclectic in their types to disclose its character. I have already pointed out the iconographic isolation of many of the types in the marginal miniatures of the Rabula Gospels, as well as their Oriental-Hellenistic characteristics and, in some cases, their affinities with proto-Byzantine iconography. The miniatures of the Etschmiadzin Gospels, more Oriental in style than those of the Gospels from Zagba, present so many points of iconography analogous to Palestinian-Coptic types, that they also fail to suggest a separate tradition of Biblical representation in northern Syria. For a few scenes it is possible to recognize a Syrian type and in the development of Byzantine iconography, as in the evolution of Byzantine architecture, it is possible to trace certain methods of representation to Syrian sources as well as to Anatolia where it has generally been supposed that the prototypes of Byzantine iconography were formulated.

The iconographic development of Byzantine art brings this review to the final phase of early Christian art. The custom of including as "Byzantine" the entire development of east Christian art from the fifth century in Egypt, Syria, and Asia Minor, as well as in Constantinople, is not sufficiently accurate. The actual Byzantine, with its consistent formulae of iconography, its fully developed methods of representation, and its traditional forms, did not appear until the ninth century as a homogeneous style, although as early as the sixth century, and far earlier

⁴⁵ See p. 127.

in the case of its architectural and ornamental forms, its component characteristics appear in the arts of the East.

Prior to the reign of Justinian, the new capital which Constantine had established in the East was artistically subservient not only to the Hellenistic art of Rome and Greece, but also to the new arts which were originating in the old, established centres of the Orient. Springing suddenly from an obscure seaport on the Bosphorus into the prominence of an imperial capital, it lacked an artistic background and was dependent on the traditions of the Hellenistic art of Asia Minor and of the developing arts of the Orient which could be appropriated, by imperial patronage, for its adornment. For centuries Constantinople was the clearing house of the Orient and, while all the elements of the new styles from Egypt, Syria, and Asia Minor found their way to the capital, and the ateliers of Constantinople became centres of artistic production, it was an eclectic and exotic art that was practiced there.

By the sixth century the brilliancy of Constantinople reached a kind of zenith under Justinian. Under this ambitious, art loving, and lavish Emperor who adorned not only the capital but even his whole realm with great churches, resplendent with mosaics, rich carvings and sumptuous inlays of costly marble, the artistic centre of gravity shifted to Constantinople. This "first Golden Age of Byzantine Art," as it has been frequently called, did not mark the final formation of a Byzantine style. Rather it was the culmination of the early Christian period, a magnificent compilation of the new artistic elements of the East, executed on a scale hitherto undreamed of, which were now to be assimilated into Byzantine art. "The systems of architecture," wrote Strzygowski, "peculiar to the most important regions of the Hellenistic Orient (Egypt, Syria, and Asia Minor) combined to evolve the new forms of Hellenistic-Oriental art, the Byzantine, and Hagia Sofia must be considered as the incomparable monument of this reciprocal penetration." Magnificent and unapproached as was this edifice, rather than an example of a Byzantine type, it was the unexcelled perfection of Hellenistic and Oriental forms brought into perfect and harmonious accord for the first time. While exemplifying the elements of Byzantine architecture, it was not, as a whole, characteristic and typical of the Byzantine type of church which appeared in the ninth, and was universal in the eleventh century.

In iconography this is even more obviously true. Although any of the forms of Byzantine iconography may be recognized in the sixth century as they occur in the native arts of Asia Minor, Syria, and Egypt (and were brought to Constantinople), it was not until after the Iconoclastic controversies and the invasions of the Arabs, Persians, and barbarians from the north had stifled the national arts in the provinces, that Byzantine iconography appeared in fixed forms and universally adopted types which approached a science in their consistency.

Byzantine iconography, which is itself characteristic and specific, was eclectic in origin. As in the architecture, features and types were adopted from Egypt and Syria, but by far the greater number of prototypes emanated from Anatolia. The influence of Syria and Palestine on this formation has already been pointed out by Heisenberg in his study of the mosaics of the Church of the Holy Apostles at Constantinople, and the influence of the Rossano Gospels and the Sinope fragment, from Anatolia, has been generally recognized.

The character of proto-Byzantine iconography, as it occurred in these Anatolian miniatures and became characteristic of the developed types, was both monumental and narrative. The proto-Byzantine types, which were to be formalized into an almost adamant tradition, a kind of pictorial script for Byzantine painters, were highly historical in conception as they included all the characters in any way connected with the actual event to be depicted. This amplification of the types, in spite of their dogmatic, liturgical, and symbolical forms and the stereotyped and hieratic rendering which gave them a monumental style, made the iconography more narrative than that of other Oriental schools.

PROTO-BYZANTINE TYPES

The following summary of the scenes which have been discussed in the previous pages briefly illustrates the character of proto-Byzantine types and their relation to Byzantine iconography of the ninth century. In many cases, where the prototypes do not exist, it is only the salient features of the Byzantine type which are stated.

*Nativity.*⁴⁶

There is a small and uncommon sub-type, which includes an eighth century censer from Kertch, in which the midwives are omitted and the

⁴⁶ See p. 30. See also note 78, p. 32.

Adoration of the Angels introduced. The regular type, which occurs on no early Christian examples and was not universal until the ninth century, represents Mary lying on a mattress with Joseph sitting at one side, depicts at first the event in the open and later in a cave, and besides the two midwives washing the Child, includes the adoring angels, animals, shepherds, and often the Magi.

*The Adoration of the Magi.*⁴⁷

In the ninth century the famous Homilies of Gregory of Nazianzus presents a type, in many ways a continuation of the Alexandrian-Coptic, in which an angel points out the Child, seated in His mother's lap, to the three Magi, who, differentiated one from another by their beards, advance in a line. There appeared, however, in the eleventh century a rigid liturgical type, based on the combination feast celebrated at Constantinople, which combines the Epiphany with the Nativity and with the Adoration of the Shepherds, and it was this type which passed into Italo-Byzantine art.

*The Miracle of Cana.*⁴⁸

This is an amplification of the Syrian and Palestinian-Coptic type in which the wedding feast is added to the representation, with the bride, groom, and guests sitting around the table as the Saviour, at the suggestion of the Virgin, performs the miracle.

*The Healing of the Blind.*⁴⁹

There are two types based on two different miracles wherein Christ healed the blind. One is a continuation of the Syrian type, as it occurs in the Rabula Gospels, in which two blind men seek the mercy of the Saviour. This type occurs in the sixth century in the proto-Byzantine miniatures of the Sinope fragment and in the ninth century in the miniatures of the Homilies of Gregory. The second type comes from a proto-Byzantine source in the miniatures of the Rossano Gospels and also occurs in the miniatures of the Homilies. Here Christ, accompanied by His disciples, touches the eyes of a single blind man and to the right of the composition is the pool of Siloam where the blind man washes the spittle from his eyes before a throng of onlookers.

⁴⁷ See p. 58.

⁴⁸ See p. 93.

⁴⁹ See p. 101.

*The Healing of the Paralytic.*⁵⁰

This again is the amplified, historical rendering of the scene wherein the paralytic, after the Biblical account, is being lowered on his bed to Christ through the roof of the house. While there remain no early Christian prototypes of this scene, it appears in the eighth century in the Byzantine frescoes of San Saba at Rome and in the ninth century in the Homilies of Gregory.

*The Raising of Lazarus.*⁵¹

The scene that appears in the sixth century in the miniatures of the Rossano Gospels became the traditional Byzantine type. In the rock hewn tomb is seen the swathed body of Lazarus supported on the right by a servant, while another servant is often figured either undoing the wrappings or holding back the slab of the tomb. Christ is bearded and clothed in a purple tunic and wears a cruciform nimbus; at His feet the two sisters of Lazarus lie prostrate and behind Him are groups of disciples and spectators; a characteristic feature is a man holding his nose.

*The Entry into Jerusalem.*⁵²

Again the type which appears in the sixth century in the Rossano Gospels was fully developed by the ninth century in the Homilies. The Saviour, followed by His disciples, rides sidewise, while boys spread a mantle beneath the feet of the ass and others look down from treetops on the scene. A large multitude issues from the gates of the city and people look out from the windows.

*The Last Supper.*⁵³

Two types of this scene exist, one liturgical and the other historical. The Liturgical type, which appears in both the Rabula and Rossano Gospels, is a representation of Christ as Priest in the First Communion with His apostles, and only relates to the Last Supper as that event was the occasion of the First Communion. This type became a favorite theme for the decoration of Byzantine apses. The historical type, which also occurs in the Rossano Gospels and became traditional in Byzantine art, depicts the Saviour seated with His twelve disciples, among whom Judas is distinguished by the way he reaches forward to grasp the bread and wine of which they are to partake. By the ninth century the beloved

⁵⁰ See p. 106.⁵¹ See p. 120.⁵² See p. 127.⁵³ See p. 139.

disciple, John, is characterized as he leans on the Master's breast and Judas is isolated from the rest of the Twelve.

* * *

The most interesting result of the foregoing classification of types is the emergence,—out of the hitherto confusing mass of sixth century monuments,—of the Alexandrian-Coptic and Palestinian-Coptic groups of Egypt. To the former must now be assigned the much discussed Chair of Maximianus and the ivories related thereto; the latter includes the numerous works that have been gathered about the Murano book cover, and adds materially to the archaeological data bearing on the relations of the Holy Land with Upper Egypt in the sixth century. These groups, and the Provençal which is treated at length in Part II, are the only ones that can be localized into "schools," and therefore afford criteria by which to judge the specific provenience of works presenting their characteristic types. The eclectic group of Provence presents a few types of its own, a number of traditional Hellenistic forms, and several others of Oriental origin which will be discussed in Part II.⁵⁴

⁵⁴ See p. 201.

PART II

A SCHOOL OF IVORY CARVERS IN PROvence

I

INTRODUCTION

The first part of this volume has been devoted to a study of iconography with the idea of isolating and defining the artistic centres of early Christian art which flourished around the shores of the Mediterranean during the first seven centuries of Christianity. With the exception of Christ Triumphant, the Biblical scenes which have been chosen to show the iconographic independence and distinguishable character of these "schools" of Christian art are the New Testament scenes that appear on a group of ivories that I would attribute to Provence. Since, in my classification of the iconography of the early Christian period, the types that occur on the ivories of this group have stood out in marked isolation from the other types, I have assumed the existence of a new school of art, a school of ivory carvers in Provence, whose connection with Marseilles and presumably with the famous convent of St. Victor I hope to sustain in the following pages.

The group of ivories, which consists of a diptych in Milan cathedral, a casket from Werden that is now in the Victoria and Albert Museum at London, a fragment in the Nevers Museum, another piece possibly belonging to the same ivory in the Berlin Museum, and a diptych in the Library at Rouen, has been generally recognized by the authorities as a unit, with the exception of the Rouen diptych.¹ The eclectic nature of

¹ Since this book has gone to press I have come to the conclusion that the four ivory plaques in the British Museum (Dalton, *Catalogue of the Early Christian Antiquities in the British Museum*, no. 291) belong to this Provençal group. The iconography for the most part is Hellenistic and is similar to the types seen on the sarcophagi of Gaul. Among the scenes on the plaques is an Oriental-Hellenistic type of the Crucifixion which was known in Provence (Gregory of Tours, *De Glor. Martyr.*, XXIII, see p. 205) and is

the group, and the confusion that its mixture of Eastern and Western characteristics has caused in attribution, are most clearly brought out by a cursory review of the various artistic centres to which it has been assigned.

The Eastern character of the ivories was first recognized by Labarte² who called the Milan and Werden ivories the products of early Byzantine art executed under Justinian at Constantinople. This early Byzantine origin was later reasserted by Dobbert³ on the ground of the enamel work occurring on the Milan covers. Strzygowski, having first said that the group was Italian (Milanese?) done under Eastern influences,⁴ asserted at a later date that the Milan covers may have been brought to Milan, but that they must have been executed nearer Asia Minor.⁵ While the ivories of the group have been attributed to Italy by De Rossi,⁶ Venturi,⁷ Schmid,⁸ Stuhlfauth,⁹ and Westwood,¹⁰ Haseloff was the first to show their connection with Rome.¹¹ Of these same authorities who sustained an Italian origin, De Rossi and Schmid have suggested Milan as the possible centre where the work was done and Stuhlfauth has attempted to point out the actual connection of the group with that city. Except for a few analogies with certain sarcophagi, his ostensible reason for such an attribution lay in the fact that Milan was the principal seat of government in Italy from the reign of Diocletian to 404, and that as early as the middle of the fourth century it was already the great ecclesiastical

consistent with the Oriental-Hellenistic character of the region. This representation of the Crucifixion, however, manifests an odd feature in the centurion who thrusts his lance into the left side, instead of the right, of the Saviour. All Eastern examples, from early Christian times throughout the history of Byzantine iconography, represent the lance thrust on the right. While uncommon, this rendering on the ivory appears later on Merovingian and still later on Irish monuments, and leads me to believe that it was a type originating in Provence and passing thence to the later art of Gaul and so to Ireland. Other iconographic peculiarities on these ivories were continued, as I have already shown was frequently the case with Provençal types, on Carolingian and Ottonian monuments. The technique of the ivories is, moreover, similar to the workmanship and style of the Berlin fragment, which belongs to the Provençal group, and to figures on the sarcophagi of Provence.

centre of the West. Molinier, who saw the eclectic nature of the Milan covers, did not assign them, but simply remarked upon their Greek character qualified by Italian affinities.¹² Finally Dalton, who with Stuhlfauth viewed the group as a unit, said that it was "less obviously Oriental" than some of the other groups and yet in certain respects suggested a doubt as to its Western origin.¹³

Keeping in mind this strange mixture of Eastern and Western features, which nearly all the students of the ivories have recognized, but which none has fully explained, I wish to show in the following chapters how in Provence the East and the West mingled, how the local traditions were Roman while the commercial and religious relations were nearly all with the Orient, and how the art of the sarcophagi manifests the same eclectic character.

Before considering, however, the Orientalizing of Gaul during the first six centuries of the Christian era, I wish to emphasize the importance of the fact, already brought out in the previous pages, that the rendering of many scenes on the ivories which I would call Provençal, follows the account in the apocryphal Gospel of Pseudo-Matthew. This interesting gospel purports to be a Latin translation made by St. Jerome from a Hebrew Gospel of St. Matthew,¹⁴ but is really a compilation from the old Jewish-Christian Gospel attributed to James, and a Gnostic recension thereof.¹⁵ It certainly dates no earlier than the end of the fourth century and according to Michel it might have been written as late as the sixth.¹⁶ Lipsius inclines to the end of the fifth century as the most likely date.¹⁷ Its date is thus only an approximation while its odd text, primarily Oriental in origin, written in Latin, and pervaded with interpolations which are foreign to the other apocryphal gospels of the East, has been inadequately explained.

While this text differs in many respects from other gospels, it is in the description of the Nativity and the Adoration of the Magi that it becomes evident, from a study of Christian art, that the translator interpolated his original with the conscious purpose of bringing the account into

¹² Molinier, *Hist. des arts appliqués*, I, *Ivoires*, p. 61.

accord with the established art in the West. At the outset, in the description of the Nativity, Pseudo-Matthew differs from all the canonical texts authorized in the West and agrees with the purely Oriental versions in relating that the time for the delivery came when Mary and Joseph were on the way to Bethlehem and that Mary went into a cavern. While the writer, following Eastern tradition, introduces the doubting midwife into the Nativity, he also inserts a description of the Adoration of the Ox and the Ass which appears in no other gospel account, either apocryphal or canonical. We read there that "on the third day after the birth of our Lord Jesus Christ the Blessed Mary went forth out of the cavern, and entering a stable, placed the Child in the manger, and the ox and the ass adored Him . . . and Joseph and Mary lived in that place with the Child three days."

I have already pointed out how slight was the consideration of the early theologians for the actual Birth¹⁸ and how in the fifth century, when Pseudo-Matthew was being translated from earlier accounts, the presence of the ox and the ass as symbols of the adoration of the natural world was already traditional.¹⁹ We have also seen that the manger-shed was a fixed feature in Western Nativities. As so frequently happens, the established art influenced the literature of the period; into the Eastern narrative of the Birth, whose Eastern motives of midwives and the cave contrast so noticeably with the canonical accounts, the Latin translator inserted the only description that we have of the Adoration of the Ox and the Ass, and takes obvious pains to reconcile the cavern of his Eastern source with the shed of Latin tradition.

In the case of the Adoration of the Magi, an artistic type had already grown up in the West before the fifth century which was in direct contradiction to an early tradition that the Birth and the Adoration were synchronous.²⁰ Inasmuch as the canonical versions are vague as to the age of the Child at the time of the Adoration, the translator sought to reconcile his text with the prevalent custom in the West of representing Jesus as a child of two years. It reads: "Two years having passed, some Magi came from the Orient to Jerusalem, and entering into the house, they found the Child Jesus resting on His mother's breast." Thus as in the case of the Adoration of the animals the translator brought his source

¹⁸ See p. 19.

¹⁹ See p. 20.

²⁰ See p. 45.

into accord with an already established artistic tradition, although the East commemorated Birth and Adoration on the same night. At the same time the interpolator, in his effort to popularize the text, makes specific reference to the gifts that the Magi brought; besides referring to the customary triple gift of gold, myrrh, and incense, he tells of "great gifts" given to the Virgin and to *Joseph* and of the pieces of gold which each of the Magi gave to Jesus. Again he was seeking to conform his text to the frequent presence of Joseph in the scene, and to the variety of objects which in Western art the Magi present to the Saviour.

That the Gospel of Pseudo-Matthew was peculiarly adapted to the religious character of Provence will become evident from the following chapter on the Orientalizing of Gaul. The country was primarily Gallo-Roman but permeated with an Oriental element in the population which dominated the trade, introduced many of its own motifs of art, and brought the Christianity of Provence more into accord with the Christianity of the Orient than with that of Rome. In the fifth century the West, wishing a more detailed account of the birth of the Virgin, her marriage, and the circumstances connected with the birth of the Saviour, eagerly appropriated, regardless of the prohibitory mandates of the orthodox church, the various apocryphal narratives which had been written in the Orient. Of these apocryphal gospels the Pseudo-Matthew, as a Latin translation brought by interpolation into accord with Western notions, was the most popular. If not actually provided, it was admirably adapted for just such a community as Provence where there was an active mixture of Oriental peoples and the indigeneous Latin population. The relation of the ivories to the gospel, as demonstrated in Part I, is obviously an argument for an earlier date than the latter part of the fifth century, for one of the ivories of our group, the Nevers fragment, held by competent authority to be no later than 450, appears to base its scenes on Pseudo-Matthew.

In closing this introduction a word of explanation is perhaps necessary concerning the addition to this volume of a long chapter on an ivory that is not included in the Provençal group. The Bodleian book cover, a Carolingian ivory of about 800, not only preserves many of the Provençal iconographic types, but is also to a large extent a copy of a diptych of which the Berlin ivory (and possibly that of Nevers) was a part. So striking is the affinity with these ivories that a few authorities have

even gone so far as to attribute it to the early Christian period. The very fact that a Carolingian ivory preserves the iconography of a group of ivories that may possibly be attributed to Provence helps to confirm the Provençal origin of the ivories; for as Marseilles and the other cities at the mouth of the Rhone were the main channels through which Eastern ideas, products, and art entered and spread through Charlemagne's kingdom, so is it more than likely that some of the iconography which passed up that highway into Carolingian art was Provençal.

II

THE ORIENTALIZING OF GAUL

A country's art springs from the deepest strata of its life and activities. Its roots lie not only in the racial characteristics but also in the more dominant exotic influences which are always tending to reshape a race. They are interwoven with and to a large extent dependent upon the social, religious, and economic factors which continually change the aspects of society and alter, stimulate, or hinder the development of its ideals and artistic efforts. I hope to make plain that the early Christian art of Provence was largely inspired by Eastern importations. If so, its many artistic parallels with the East should appear as the manifestations of strong commercial, religious, and artistic currents which were flowing from the Orient into Provence and should make intelligible the curious mixture of Eastern and Western features in the eclectic art of southern Gaul. I wish to sketch briefly the commercial, religious, and artistic factors from the East which were working in and on Provence to qualify in favor of Oriental ideas and customs the Hellenistic Roman traditions already established in the region.

The commercial relations of Provence with the East reach back to the times when the Phoenicians had a direct route between the Orient and Provence and spread their civilization through the region.¹ During Christian times, when Syria continued the traditional commerce of the Phoenicians and spread her products over all the Mediterranean, it was along this route that Eastern merchants with their wares, and later Eastern mis-

¹ Courajod, *Leçons professées à l'école du Louvre*, I (1899), p. 48.

sionaries and Eastern art, travelled from the Orient into Provence. At the beginning of the Middle Ages Syria was one of the most fertile and industrious countries of the world² and from the fifth to the eighth century Syrian merchants were the principal navigators of the Mediterranean.³ Of all the countries of the West which they entered, Gaul was the territory where their influence became most widespread and powerful. The points of departure for this Oriental expansion into Gaul were Marseilles and in a less degree the other old Greek cities of Provence.⁴ Arles especially had for a long time been a depot of Oriental commerce and a centre of immigration. The relation of Arles with the Orient is attested by a funeral inscription⁵ found in that city and by a rescript⁶ of Claudius Julianus that was found in Deir in Lebanon, and gives evidence of the relations of the mariners of Arles with the Orient.

The forms of merchandise which these Eastern traders imported into the ports of Provence and then dispersed over the whole Gallic region were many and varied. Commodities of all sorts, as the contemporary writers tell us,⁷ came from centres in Syria famous for their production. The Syrians, St. Jerome writes,⁸ did a great commerce with the West in ivories, stuffs, precious stones, wines, and many other things. Besides the commodities and luxuries destined for the tables of the Gallican nobles there were introduced great quantities of silks⁹ to be used for the vestments and ornaments of the Christian cult. Syria was not the only country whose products were brought to the shores of southern Gaul. The commerce with the Egyptians was very active.¹⁰ Also, according to Gregory

of Tours,¹¹ there were constant relations between Marseilles and Constantinople.

Not only did these Eastern carriers pour their wares into the ports of Gaul, but the Syrian merchants settled in all the principal towns and carried on most lucrative trades.¹² Corporations of Syrian merchants existed in the larger towns of Italy, Gaul, Spain, Africa, and Brittany. The existence of these colonies is attested by Jonas, biographer of St. Colomanus.¹³ St. Jerome says they were everywhere¹⁴ and Salvianus¹⁵ writes that they had taken possession of the greater part of the Gallic towns. In the north we see them at Worms, Cologne, Metz, and Poitiers.¹⁶ The many funeral inscriptions, of which some are dated after the Syrian calendar,¹⁷ show them established in Arles, Narbonne,¹⁸ Tours,¹⁹ Clermont,²⁰ Vienne,²¹ Lyon,²² and Paris.²³ An epitaph from Lyon,²⁴ half in Greek verse and half in Latin prose, reads: "Venturous and sweet child of Athele, decurion of the city of Canatha [Kanawât in the Hauran] in Syria, who left his native country in order to come into this land to trade: he had at Lyon a booth, furnished with Aquitaine merchandise. Irresistible destiny has made him find death on a foreign soil."

These large communities of Orientals, which kept together in the towns and often continued to speak their own language, became very powerful.²⁵ Many interesting stories of their riches and influence are related by Gregory of Tours: he tells of a Syrian merchant in Paris²⁶ who gained, at the price of silver, the episcopal seat and then introduced into the administration of the diocese a crowd of Syrians from his own family; he also writes of a Syrian merchant at Bordeaux,²⁷ named Euphron, whose riches

excited the jealousy of Berthramnus, the bishop of the town. As these Eastern peoples commenced to gain control of trade and commerce, they profited by it to enrich themselves, and their riches soon raised their social position. With this acquired power, not only did they elect many of the bishops in Gaul and Italy, but in Rome from the sixth to the seventh century they came near to possessing the exclusive privilege of choosing the Pope.²⁸ During all the time that their influence was augmenting, they tended to preserve their customs and language, and the manner of living of their Oriental lands. Therefore "it is not astonishing that the perpetual contact between the Occidentals of the barbarian epoch and these Orientals, more refined than they, had brought in the long run some changes of ideas and modified in a certain measure the Western culture of the Middle Ages."²⁹ In other words, the manners, the customs, and the ideas of the region, as we shall see in the case of its art, were bound to become eclectic, a mixture of Oriental notions with Occidental characteristics.

Religious expansion has always tended to follow in the wake of the navigator and along the beaten path of the trader. It was in the third century that Christianity began to render itself master of the principal towns of Gaul,³⁰ and throughout its history the relations of the Gallic Church were largely with the East. The early Gallican liturgy was that of Ephesus,³¹ of the primitive church of Asia, imported into Gaul by the founders of the church of Lyon. From this church it radiated over the whole Transalpine West. In the fourth century the leadership passed from Lyon to Trier, Vienne, and Arles, and in the fifth century Arles became the centre of ecclesiastical law. Nearly all the "Libri canonum" in usage in Gaul during the Merovingian times were derived from those of the church of Arles.

This relation with the East was also preserved by the monasteries which were largely founded by Eastern monks and based on Eastern models. Both at Ligugé, near Poitiers, and at Tours, St. Martin,³² about 360 A. D., founded monasteries modelled after the rule of an Egyptian coenobium. The most famous and influential for its learning was the order of the

Insulani founded in 410 by Honoratus³³ on the island of Lérins. This order was also partly based on the cenobite rule. An even greater and more powerful community was the monastery of St. Victor at Marseilles founded by Cassianus, a man who had visited many parts of the East and had lived for years as a monk in the deserts of the Thebaïd.³⁴ Many of the monks in Gaul had also emigrated from various places in the East: Sidonius Apollinaris tells³⁵ of the death of a Syrian monk from the Thebaïd who had been living near Clermont; St. Abraham, the founder of the monastery at Clermont, was born on the banks of the Euphrates;³⁶ and in the fourth century the celebrated Bishop Cassianus of Autun was born at Alexandria.³⁷ Thus from the fourth to the seventh century Gallic monasticism was "clearly Egyptian both in theory and practice"³⁸ and we may expect to see the influence of Egyptian, as well as Syrian, motifs and ideas on the art of Provence.

As a result of this intimate relation of Christian Gaul with the Orient rather than with Rome Eastern feasts³⁹ were celebrated there which were not observed in Rome nor in that region of the West where the Roman church and liturgy prevailed. Furthermore, the Eastern missionaries, monks, and ecclesiastics brought into Gaul the worship of Eastern martyrs, their relics,⁴⁰ and many art objects⁴¹ of the Eastern cults, all of which had a great influence in shaping after Oriental models the forms, observances, and above all the art of the Gallican church.

"French art, which was born Christian," writes Courajod,⁴² "had contact only with Judea, Syria, Greece, Byzantium, Ravenna, that is to say, with the Hellenistic Orient. When French art was born, Rome was simply a dependent province of the East; Rome was itself Byzantine and used the Neo-Greek art." This dependence of Gallic art on the Orient was nothing new in Christian times. Gaul was in close intercourse with the

Greek world in Roman times and with Persian and Assyrian art before our era.⁴³ As early as the first century B. C. the Gallo-Roman art was largely influenced by Graeco-Egyptian ideas and motifs, and Marseilles and the cities of Provence were centres where Hellenistic traditions, emanating from Alexandria, played a most important role.⁴⁴ At Nîmes even the municipal institutions were analogous to those of Egyptian metropolises and the cults of Isis and Anubis were popular there.⁴⁵ At this early date also the influence of Syria was only second to that of Alexandria, for relations were already established with the large Hellenistic centres, like Antioch, in Syria.⁴⁶

The sarcophagi of Gaul are the only art products of the region which show directly the existence there of schools of craftsmen. Whatever artistic influences, then, were working in the various parts of Gaul would be apparent on these sarcophagi. While sarcophagi have been found in nearly all the old French towns, by far the largest number have come from the cemeteries of Arles, Toulouse, Marseilles, and other cities of Provence. The type of sarcophagus adopted in the valley of the Rhone proceeded from Roman models⁴⁷ and the centre of this Latin school was the atelier of Arles.⁴⁸ The school of southern Gaul, of the second Narbonnaise, extended as far west as Toulouse; far from participating in the style of the schools of Arles and Rome, it recalls, on the contrary, the Eastern style of Ravenna and attaches itself by contact, more or less direct, with the Christian art of the Orient. The Greek culture stream, coming from Alexandria and other Hellenistic centres in the East, which spread into Provence from Marseilles,⁴⁹ influenced even the school at Arles, and some of its sarcophagi are more Hellenistic⁵⁰ in character than those of Rome. A type such as Christ Enthroned among His Apostles,⁵¹ rare on Roman sarcophagi and common on those of Gaul, recalls in its ren-

dering the same scene on the Alexandrian pyxis at Berlin,⁵² pointing thus to the Hellenistic art of Egypt. It is the Syrian influence, however, which is the strongest on the sarcophagi of Provence and is the most interesting for our purposes. While the number of actual Syrian tombs in Gaul is large,⁵³ the decoration of many others, not definitely connected with Syrians by inscriptions, is sufficient in itself to show their Eastern inspiration.

"The ornamental forms and decorative system employed by a people have more importance than ethnological facts or architectural details in determining the relations and migrations of a race."⁵⁴ If this be so, the ornamental proof of the peaceful Syrian invasion in Gaul is convincing. The elements of the Oriental grammar of decoration which occur on the sarcophagi have already been compiled by Courajod⁵⁵ and Marignan;⁵⁶ they include the star with six rays, rosettes, interlacings, the braid, the heart shaped leaf, the helix, the palmette, the vase with birds or animals confronting it, and above all the grapevine.

Among the many analogies in decoration between Gaul and Syria there are five motifs which most clearly show the ornamental intimacy between the two regions. The star with six rays was one of the most common elements of decoration on the buildings and tombs of the East and it was introduced directly into Provence from Syria.⁵⁷ It entered the country, as did the trade, through Narbonne, and from the region around Narbonne there remain several examples of it on the sarcophagi.⁵⁸ The running grapevine with or without birds interspersed among the leaves, common on the buildings of Syria from the earliest to the latest period,⁵⁹ appears on several Gallic reliefs of which one is in the crypt of the church of Saint Victor at Marseilles.⁶⁰ The vase with a vine or palmette growing out of it was

nearly as common an ornamental motif in Gaul⁶¹ as it was in Syria.⁶² The decorative border of heart shaped leaves springing from a running stem occurs on two sarcophagi of Narbonne⁶³ and on another at Le Mas-Saint-Antonin⁶⁴ which is near Narbonne. This motif was characteristically Oriental and one of the most common motifs of the Syrian architectural ornament.⁶⁵ The motif of the two peacocks, symmetrically arranged on either side of a vase from which grows a grapevine, appears on a sarcophagus of Provence⁶⁶ in a manner that recalls the same form on Syrian churches.⁶⁷ Furthermore, the arcade motif⁶⁸ so common on Gallic sarcophagi⁶⁹ as well as the animation of a flat wall by curtains, birds, and vine motives, and also the conch shell over the niche⁷⁰ have already been shown to be characteristic of Oriental ornament.

This Eastern ornament was spread in Gaul by three agencies: first, the Oriental merchants and ecclesiastics transmitted for execution their own native ideas to the local schools of carving; second, they also introduced from the Orient many art objects which served as models for the Provençal work; and finally, Eastern craftsmen themselves entered Gaul, along with the general migration which was pouring into the country. Gregory of Tours states that the Syrian merchants possessed many art objects and were often venders of them⁷¹ and that they frequently brought relics of Oriental saints,⁷² which must have been encased in reliquaries

of Eastern workmanship. Besides importing the foreign works of art the Syrians were sometimes the artisans, mosaic workers, and sculptors in Gaul.⁷³ An inscription of Lyon⁷⁴ mentions the presence there of Constantine of Germanicia (Syria, Commagene) who exercised the wholly Oriental art of gold and silver appliqué on metals which the Romans called *ars barbaricaria*.

The special ground of distinction, however, in early Christian art does not lie so much in ornament and style as in iconography, the method of representing the scenes of the Old and the New Testaments. In the few active centres of Christianity in the East, as Alexandria and Antioch, where the new faith first took form as a religion to be defended and promulgated and where there was first felt the necessity of enlisting the aid of art in its advancement, the more appealing and theologically important features of the new religion were symbolized in Hellenistic forms. When Christianity, working westward, permeated the Empire, carrying with it new forms of pictorial representation, these Hellenistic symbolic types found in the West a ready acceptance. In Rome and the West, as well as throughout the Empire until the fifth century, Christianity was occupied in its artistic creations chiefly with the expression of dogma, with the justification of the new faith in the eyes of paganism, and with the conversion and edification of the people. Therefore, with all their interest centred in the theological significance of their works and with no concern for fidelity to nature, the artists who painted the catacombs and carved the sarcophagi of the first five centuries gladly accepted these Hellenistic types as a solution of a distracting problem.

While the West continued to follow in its art the meagre descriptions of Biblical scenes in the canonical Gospels, and with its increasing interest in symbolism, allegory, and analogy adhered to the established Hellenistic types, the Christian art in the East was developing along different lines. In the first place, the liturgies of the East differed from those of the West and there were, therefore, other scenes to be figured in Oriental art. Furthermore, Oriental art was reverting to latent indigenous characteristics. With the dissolution of the Roman Empire the classical traditions of the Hellenistic period were gradually submerged

⁷³ Fröhner, *La verrerie antique*, p. 124.

⁷⁴ Bréhier, *op. cit.*, p. 14.

in the rising tide of national feeling throughout Syria, Anatolia, and Egypt. The result of this Oriental assertion was that the East became dissatisfied with the impersonal, restrained, and somewhat abstract accounts of the life and teachings of the Saviour as they were related in the canonical books, which had been written under classical influence, and demanded more animate, personal, and appealing narrations of the life and miracles of Jesus and the Virgin Mary, giving rise in the East to a large body of apocryphal writings which at once received the credence of the people and consequently became popular in the art. In the East, therefore, from the liturgies which gave to the artists new feasts to be represented, from the apocryphal gospels giving more detailed and narrative versions to the episodes of the New Testament, and from the assertion of Oriental ideas of frontality and symmetry in art, there developed a cycle of Biblical scenes differing radically in iconography from those of Rome.

PROVENCAL TYPES OF EASTERN ORIGIN

The first artistic impulse in Gaul, as in Rome, was Hellenistic. Again, as the sarcophagus style of Rome spread into Gaul and there was established at Arles a school of sculptors who adhered in the main to the Roman manner, the art of southern France tended to preserve the Hellenistic types even after they had begun to die out at Rome. At the same time there appear on these Gallic monuments several Eastern types which show that there was a steady infiltration of Oriental iconography from the fifth century on. It is the presence of these Eastern scenes, executed after Oriental methods, and the Eastern ornament along with the regular Hellenistic and Western types that gives to the art of Provence its peculiar eclectic character. The following scenes are examples.

The Virgin in the Temple (Fig. 153), labelled by an inscription, occurs on a fifth century slab in the crypt of Saint Maximin,⁷⁵ and again on the Milan book covers and the Werden casket. From the fourth century Syria took an extremely active part in the development of Mariolatry⁷⁶ and a feast of the Virgin was introduced from the East into the Gallican church a century before the first feast of the Virgin was

⁷⁵ Le Blant, *op. cit.*, p. 148, pl. LVII/1.

⁷⁶ Lucius, *Les origines du culte des Saints*, p. 603.

solemnized by the church of Rome in the seventh century.⁷⁷ In fact the devotional attitude of the church in Rome toward the Virgin was very slight until after Eastern prelates, apocryphal books, and Eastern art commenced to gain control in the sixth century. The first representation in

FIG. 153. ST. MAXIMIN: INSCRIBED SLAB.
THE VIRGIN IN THE TEMPLE.

Rome of the Virgin, alone and as an object of veneration, occurs in a sixth century fresco of Santa Maria Antiqua,⁷⁸ which was executed under Eastern influences. Therefore, while the possibilities of a Roman origin for the Virgin in the Temple are negligible, the importance which was given to her life by the Syrian church would account for the appearance of the scene at St. Maximin, a dependency of the monastery of Saint Victor founded by Cassianus, a monk who had spent much of his early life in the Orient.

Joseph Assured by an Angel that he need have no fear to take Mary to wife is represented on a sarcophagus of Le Puy⁷⁹ (Fig. 154). The only other representations, with the exception of the scene on the Werden casket, which is also Provençal, where Joseph is represented receiving an angel in his sleep, are on monuments of Egyptian origin. They are the ivory chair of Maximianus⁸⁰ (see Fig. 150), which was executed at Alexandria, and a fresco at Antinoë⁸¹ (see Fig. 151). The Recon-

⁷⁹ Le Blant, *op. cit.*, pl. XVII/4. This event is related in the Gospel of Matthew (i, 20), in the Protevangelium of James (Michel, *Évangiles apocryphes*, p. 29), and in the Gospel of Pseudo-Matthew (Michel, *op. cit.*, p. 91).

⁸⁰ Garrucci, *Storia*, VI, pl. 417/3.

⁸¹ Leclercq in Cabrol's *Dictionnaire d'archéologie chrétienne et de liturgie*, s. v. "Ane," col. 2060, fig. 599.

ciliation of Joseph and the Virgin, which also occurs on this same sarcophagus, from its dependence solely on the apocryphal sources and its unique character in the West at this time, is also evidence of Oriental iconography in Gaul.

The Appearance of the Star to the Three Magi, as a scene separate from the Nativity, is depicted on two sarcophagi of Arles⁸² (see Fig. 26), on the Milan book covers and on the Werden casket. The Roman church did not celebrate the appearance of the star, but in Syria it played an important part in the feast of the Epiphany on January 6.⁸³

The Massacre of the Innocents, which appears on a sarcophagus cover

FIG. 154. LE PUY: SARCOPHAGUS. JOSEPH REASSURED BY THE ANGEL. RECONCILIATION OF JOSEPH AND MARY.

at St. Maximin⁸⁴ (see Fig. 56), as well as on the Berlin ivory and the Milan book covers, points conclusively to Eastern inspiration. There was no feast of the Holy Innocents in Rome until at least a century after their remains, brought from the Orient to Marseilles by St. Cassianus at the beginning of the fifth century, had been worshipped at Marseilles and in the neighboring towns. Cassianus deposited the relics of the Holy Innocents in the Church of St. Victor at Marseilles, which he founded after 414, but distributed portions of them in neighboring churches of Provence.⁸⁵ Among the churches favored in this way we may certainly include that of St. Maximin, which was itself a dependency of St. Victor. The style of the sarcophagus cover points to

⁸² Le Blant, *Les sarcophages chrétiens de la ville d'Arles*, pls. XXI, XVIII.

⁸³ See *Appearance of the Star to the Magi*, p. 34.

⁸⁴ Le Blant, *op. cit.*, pl. LVI/1.

⁸⁵ See p. 67.

the first half of the fifth century, and it is likely that the scene of the Massacre of the Innocents which adorns it commemorated the advent of relics of the Holy Innocents at St. Maximin.

The scene of *Christ and the Samaritan Woman at the Well* was frequently represented on the monuments both of the East and of the West. The Hellenistic and hence the Roman method was to depict the Saviour standing at the side of the well; while the Eastern method, the Syrian, Palestinian-Coptic, and Byzantine, figured Him seated.⁸⁶ On three sarcophagi of Provence⁸⁷ Christ is represented in the traditional Roman manner standing at the side of the well; but on a sarcophagus of Narbonne⁸⁸ He is seated after the Eastern manner, showing the existence in Gaul of the two distinct iconographical traditions.

Ananias Being Carried Out is represented on a sarcophagus of the Abbey Saint-Ruf.⁸⁹ Although only a fragment, the scene is practically the same as that on the Brescia casket which Strzygowski attributes to Asia Minor.⁹⁰ The fact that these are the only two representations of the scene in early Christian art makes the analogy more striking.

⁸⁶ The scene of Christ and the Woman of Samaria adheres to the same iconographic classification as the other scenes treated in the first part of this volume. The Hellenistic type, which was only concerned with symbolism, disregards the Biblical account which says that Jesus sat down at the well (John iv, 1-26) and persistently represents Jesus and the woman standing at either side of the well. In the Oriental-Hellenistic type the same method of representation is preserved on the Brescia Casket and the gold encolpium in the Museum at Constantinople. The Alexandrian-Coptic type, which was a native adaptation of the Hellenistic iconography of Alexandria, shows Christ standing but introduces the Eastern form of well house. The examples of this type occur on the Maximianus chair and pyxides in the Cluny Museum, the Basilewsky, Youlgrave, and Uwaroff Collections. The actual Eastern, or Syrian rendering which later became the Byzantine type, follows the Biblical account and depicts the Saviour seated at one side of the well; this method appears in the Rabula Gospels, on an ivory cover in the Bibliothèque Nationale at Paris, and a pyxis in the Louvre. It occurs in the West not only on two sarcophagi of Gaul but also in the mosaics of the Baptistery at Naples and the church of Sant' Apollinare Nuovo at Ravenna, and on the ciborium columns of San Marco. After the seventh century this type with the seated Christ appears to have become the customary method of representation in the East and occurs later in the Italo-Byzantine monuments. As a souvenir of the traditional Oriental iconography, there is preserved today at Constantinople, as one of the rarest relics of Hagia Sofia, the rock upon which Christ sat when He conversed with the Samaritan woman (Le Blant, *Sarc. chrét. de la Gaule*, p. 110).

⁸⁷ Sarcophagus of Arles (Le Blant, *Sarc. chrét. de la ville d'Arles*, pl. XVIII/2), of Clermont (Le Blant, *Sarc. de la Gaule*, pl. XVIII/2), of Nîmes (Le Blant, *op. cit.*, pl. XXX/4).

⁸⁸ Garr., *op. cit.*, V, pl. 402/7; Le Blant, *op. cit.*, pl. XLVII/2.

⁸⁹ Le Blant, *op. cit.*, pl. VIII/4.

⁹⁰ Garr., *op. cit.*, VI, pl. 444; Strzygowski, *Kleinasien*, p. 213.

In further confirmation of the Oriental influence on Provençal iconography, Schönewolf points out the *Asia Minor type* of the young Christ with long hair falling in locks over His shoulders, on a sarcophagus of Nîmes.⁹¹ Furthermore, on a sarcophagus of Marseilles⁹² and on one of Arles⁹³ occurs the *Palestinian type* of the seated Christ, bearded and with long hair.

The means by which these Eastern types passed into Gallic iconography were doubtless the ivories and other objects of the minor arts which afforded convenient articles of import to the Oriental traders. Vestments, ornamented with scenes of the Gospels, also played their part.⁹⁴ Syrian influence in iconography may perhaps be recognized in the description by Gregory of Tours of a Crucifixion in the Genesius church of Narbonne wherein Christ is raised naked on the cross after the Oriental-Hellenistic type.⁹⁵ The apparent scandal that this exhibition of an unclad Saviour caused in Provence at the end of the sixth century would suggest that the painting at Narbonne antedated such an antipathy and was probably done in the early part of the fifth century when this rendering, as seen on the doors of Santa Sabina at Rome and on the ivory plaque in the British Museum, which I would attribute to Provence, was the prevalent type.⁹⁶ At the same time, the marked aversion of the populace by the close of the sixth century to the naked Saviour also suggests that the colobium type of the Crucifixion, which depicts Christ clad in a long garment, as is seen in Oriental Crucifixions of that period, had been introduced into Provence and was the recognized and preferred manner of representation.

To sum up: During the first seven centuries of our era there was in Provence an increasing invasion of Syrian merchants, an influx strong enough in some cases to control many of the principal towns. With these merchants came the missionaries and monks who founded churches and monasteries on Eastern models and kept alive a relation with the Christian East, quite as intimate as that with Rome. At the same time that the commercial and religious expansion was spreading over Gaul and Provence,

⁹¹ Schönewolf, *op. cit.*, p. 40.

⁹⁶ See p. 187, note 1.

Oriental craftsmen and Eastern art objects, such as ornamented reliquaries, embroideries, and carved ivories, were entering the country through Marseilles, Narbonne, and the other ports of Provence. Therefore, the art of Provence, traditionally Gallo-Roman and Hellenistic, whose initial style was that of the sarcophagus carvers of Rome, gradually turned, even on the sarcophagi themselves, to Eastern ornament, peculiar to the churches of Syria, and Eastern methods of representing the scenes of the Gospels. This art, however, was an eclectic one and the Oriental characteristics appeared only as interpolations in a Latin setting.

It is apparent that Provence was a region where the ideas and customs of the East and West met freely and where the mark of Oriental influence was clearly defined. The society in Provence, so largely Syrian, the Eastern character of the church, and the constant introduction of Eastern art objects, made it a centre peculiarly equipped to execute the group of ivory carvings to be discussed in the following pages. In the discussion of the early Christian scenes in Part I, I have already noted the peculiar and Provençal character of the iconography found on these ivories; I shall now assemble the data thus afforded, studying the ivories separately and considering the Provençal school as a whole.

III

IVORY BOOK COVERS IN MILAN CATHEDRAL

Book covers

Milan

Date c. 500 A. D.

Cathedral

In Milan cathedral are two ivory book covers (Figs. 155, 156) which are the most interesting and important examples of this disputed group of ivory carvings. The scenes depicted on these panels are all drawn from either the canonical or apocryphal accounts of the life of Christ and offer an extensive range of iconography. At the centre of the first cover (Fig. 155) is a rectangular panel, formed by a delicate acanthus border, in which is carved a wreath rich with various fruits and flowers and bound at the bottom by a ribbon the ends of which flutter off, like scrolls, into the two lower corners of the panel. Within the wreath is the Lamb of God, crowned with a laurel nimbus and executed in cloisonné enamel. In the background, behind the lamb, appear the outlines of two pilaster strips.

FIG. 155. MILAN: CATHEDRAL, IVORY BOOK COVER.

capped with Corinthian capitals, supporting an unadorned lintel which, in its turn, bears a cornice carved with acanthus leaves. Across the top of this cover is a long panel with the Nativity in the centre and, at either corner, a symbol of an Evangelist framed by a wreath. Reading down, the scenes on the left are the Annunciation to the Virgin at the Spring, the Three Magi Gazing at the Star of Bethlehem, and the Baptism of Christ. The scenes on the right, following the same order, read: The Virgin in the Temple, Christ among the Doctors, and the Entry into Jerusalem. In a panel extending across the bottom of the cover is depicted the Massacre of the Innocents before Herod, and in the corners are busts, framed in wreaths, of the two Evangelists whose symbols appear in the two upper corners.

The second cover (Fig. 156) has the same middle panel with the acanthus border and pilaster strips; between the pilasters stands a cross in cloisonné and from the lintel hang curtains which are caught back to the pilasters. The cross is set upon Mt. Zion from the base of which flow the four rivers of life. Within the horizontal panel at the top is the Adoration of the Magi and a symbol of an Evangelist in each corner, the lion for Mark and the eagle for John. The scenes on the vertical panel at the left, reading down, are Christ Healing the Blind, the Paralytic, and the Raising of Lazarus. On the right, following the same order, are Christ (seated upon a globe) Presenting Wreaths to Two Saints or Apostles, the Last Supper, and the Widow's Mite. The Miracle of Cana with the heads of two Evangelists in the corners fills the bottom panel.

The iconography of the scenes on the two covers, regarding them in sequence, shows a peculiar mingling of Eastern and Western methods of rendering the Gospel events. This eclectic character of the iconography is consistent to a marked degree with the eclectic character of the ornament and iconography on the sarcophagi of Provence and in a general way with the constant infusion of Oriental forms, customs, and religious rites into the more native Roman traditions of southern Gaul. It has already been shown how freely the ideas and customs of the East and West met and mingled in Provence and how the society in Provence, so largely Syrian, the Eastern character of the church, and the constant introduction of Eastern art objects, made it a centre peculiarly adapted to execute a group of ivories whose motifs and iconography present a curious

FIG. 156. MILAN: CATHEDRAL, IVORY BOOK COVER.

mixture of Oriental and Occidental methods.¹ Moreover, several of the scenes on the covers are compositions peculiar to the monuments of Provence. As one would naturally imagine in a region where Syrian influence was dominant, the scenes dealing with the life of the Virgin and the infancy of Jesus are based on Eastern apocryphal gospels instead of on the canonical books, which were faithfully adhered to under the Roman church during the first five centuries of Christian art. While many of the scenes are based upon apocryphal sources, they do not appear to follow the purely Oriental books but conform more closely to the Gospel of Pseudo-Matthew.² This partial dependence of the artist of the Milan covers on a semi-Oriental apocryphal gospel not only aids in explaining the presence of Eastern iconography in the West but is also consistent with the heterogeneous racial and religious elements in Provence which would readily have received a gospel like Pseudo-Matthew.

I shall here review in brief the iconographic features of the book covers, which have been developed more fully in Part I. The iconography of the scenes on the covers is principally Western and for the most part may be connected with Provence. Intermingled, however, with Occidental types are Oriental features which, as I pointed out in the Introduction, have given rise to the divergent opinions among the writers on these covers as to their place of origin.³ If my classification of the types of the various scenes, which I have sought to sustain in the first part of this volume, is accepted, the Western origin of the Milan book covers is unquestionably demonstrated. Of the sixteen scenes appearing on the ivories seven, the so-called Nativity, the Adoration of the Magi, the Healing of the Paralytic, the Raising of Lazarus, the Presentation of the Crowns, the Entry into Jerusalem, and the Last Supper, are types peculiar to the Christian art of the Occident at the end of the fifth century. In contrast to these Western types the rendering of the Healing of the Blind is a Syrian type, while the Miracle of Cana and the Last Supper present in their compositions transitional types marked by the introduction of Eastern elements into Western renderings of the scenes. At the end of the fifth century, moreover, when the Milan covers were carved, such scenes as the Virgin in the Temple, the Annunciation at the Spring, and the Appearance of the Star to the Magi could only have been executed

¹ See p. 192 sq.

² See pp. 8, 12, 18, 35, 70.

³ See p. 188.

in a community where the influence of the Eastern church was strong and where Oriental forms were popular. Moreover, five of the scenes, the Virgin in the Temple, the Annunciation at the Spring, the Adoration of the Ox and the Ass, the Appearance of the Star, and Christ among the Doctors, are based on the Latin Gospel of Pseudo-Matthew which, up to the end of the fifth century, shared with other apocryphal gospels the disapproval of the church at Rome. Of the other scenes on the Milan covers, the Massacre of the Innocents and the Baptism are distinctly Provençal. These last two scenes, together with the Virgin in the Temple, the Adoration of the Ox and the Ass, the Appearance of the Star, and the Adoration of the Magi, occur as types or show details peculiar to the group of ivories that I would attribute to Provence and are represented in the form which they assume on monuments either found in Provence or stylistically connected with that region. These six scenes, by their distinctive composition and rendering, isolate the ivories as products of a particular school whose most important product remaining to us is the diptych in the Cathedral of Milan.

The evidence for the Western origin of the covers is amply conclusive: the representation of what is generally recognized as the Nativity but is really a scene of the Adoration of the Ox and the Ass⁴ is a Western type, since the event is depicted in a shed instead of in the open as on all Eastern examples;⁵ the Adoration of the Magi is to be classified as Western from the fact that the Magi are beardless;⁶ the Healing of the Paralytic, wherein the cured man is depicted in profile holding his bed upside down on his back as he faces the Saviour, conforms exactly to the type used in the catacombs and on the sarcophagi of Rome;⁷ the Raising of Lazarus in which Christ touches with His wand the figure of Lazarus who, swathed like a mummy, stands with his head covered in the doorway of a little aedicula set upon a podium while one of the sisters of Lazarus kneels at his feet, is peculiar to the representations on Western sarcophagi and does not occur on Eastern monuments;⁸ Christ enthroned on a globe, both in the scene of the Presentation of the Crowns and in the Widow's Mite, is, as far as existing examples show, an Italian conception appearing as early as the fourth century in Rome⁹ while the Presentation of the

⁹ See p. 142.

Crowns was common to the monuments of Rome, Ravenna, and Gaul; in the Entry into Jerusalem Christ rides astride after the manner of representation in the West and in distinct contrast to the Eastern rendering where He is always depicted riding sidewise after the Oriental fashion;¹⁰ and finally the Last Supper sustains the Western origin by the retention in the composition of the loaves and fishes, which, as symbols of the Eucharist, replace the bread and wine of the actual event which were represented in the East.¹¹

At the same time that the Western origin of the covers is clear, certain iconographic types and features of composition appear that betray a distinctly Eastern origin and show that the ivories were executed at a time when Hellenistic symbolism in the West was breaking down under Eastern influence and that they were done in a community where Oriental and Occidental types might naturally mingle and tend to produce an eclectic art. In the first place the Healing of the Blind, where two men instead of one present themselves to Jesus for aid, is an Eastern type.¹² The Miracle of Cana shows a transitional type wherein the simple and highly symbolic Hellenistic type begins to break down under the Oriental tendency to give a more narrative rendering to Biblical events and to make of this scene an actual representation of the wedding feast; while the figure of Christ is represented touching with His wand the jars of water, after the symbolic method in the West, a narrative interpretation has been given to the scene by the introduction of a servant pouring the water into the jars and by increasing the number of spectators from one to eight.¹³ In much the same manner the Last Supper, while manifestly of Western origin, shows again a transitional type in that the scene is represented as an actual event after the Eastern manner while Western characteristics appear in the retention of the symbolic loaves and fishes and the abbreviation of the number of disciples to three.¹⁴ The Eastern influence in the covers is also shown by the reflection in certain scenes of the Eastern liturgy. While no examples of the Virgin in the Temple appear on Eastern monuments before the eighth century, the relation of the scene with the worship of the Virgin in Syria where a particular liturgy had been conceived in memory of the life that Mary spent in the temple,

¹⁰ See p. 124.

¹¹ See p. 136.

¹² See p. 100.

¹³ See p. 91.

¹⁴ See p. 136.

the fact that the event is only mentioned in the apocryphal gospels, and the absence of any feast of the Virgin in Roman liturgies before the seventh century, present evidence that such a scene could have been carved only in a community where Eastern religious forms were observed.¹⁵ The Annunciation to the Virgin at the Spring is also an inherently Oriental scene, for it again is only related in the apocryphal gospels, and in subsequent art appears only on the monuments of the Orient.¹⁶ The Appearance of the Star is an Oriental motif, for this scene had no liturgical significance in the Roman church as it had in Syria, where on the night of January 6, besides the Birth and the Adoration of the Shepherds, the Appearance of the Star was especially celebrated.¹⁷ The dependence, moreover, of the Virgin in the Temple,¹⁸ the Annunciation at the Spring,¹⁹ the Adoration of the Ox and the Ass,²⁰ the Appearance of the Star,²¹ and Christ among the Doctors²² on the Latin apocryphal Gospel of Pseudo-Matthew indicates an origin for the ivories in a mixed community that was basically Western but where Eastern forms were popular.²³

It must be granted, then, that the Milan covers present an odd mixture of Oriental and Occidental iconography and could have been produced only in a community, such as I have shown Provence to have been, where Eastern and Western forms freely intermingled. Reviewing now those features of the iconography which connect the covers most directly with Provence, the Massacre of the Innocents is above all others the most convincingly Provençal of the scenes on the covers. Besides connecting the covers with southern Gaul and probably with the church of St. Victor at Marseilles, it is the one scene that most closely binds together the group of ivories. The Massacre of the Innocents does not appear either in the catacombs or on the sarcophagi of Rome.²⁴ Of the twelve examples of the scene which occur before the ninth century, four are Eastern, one is Roman and strikingly different from all the rest, and the remainder are to be connected with Gaul. The representations from Syria and Egypt in the Rabula Gospels, the frescoes of Antinoë, a pyxis in the Louvre, and a censer at Cairo, as well as the scene on the arch mosaics of Santa Maria

¹⁵ See p. 10.¹⁸ See p. 9.²¹ See p. 35.²⁴ See p. 60.¹⁶ See p. 11.¹⁹ See p. 12.²² See p. 70.¹⁷ See p. 33.²⁰ See p. 20.²³ See p. 191.

Maggiore at Rome, all show the sword type wherein the soldiers kill the children with their swords. On the Milan ivory, however, as on the other ivories of the group, is the smashing type where the soldiers hurl the innocents to the ground. The first example of the smashing type is on a sarcophagus cover of the early fifth century in the crypt of St. Maximin in Provence. In the sixth century the type occurs in the miniatures inserted into a Carolingian manuscript at Munich and in the ninth century appears on two Carolingian book covers. The type was thus traditional in Gaul and the earliest example we know was found in the famous crypt of St. Maximin whither pilgrims from all parts of Gaul were wont to travel, to do reverence before its relics. The original provenience of the smashing type may be located by the close connection of the church of St. Maximin with the abbey church of St. Victor at Marseilles. The Holy Innocents were worshipped from ancient times at Marseilles and their relics were brought from the Orient to that city by Cassianus. It is likely, then, that in the church of St. Victor, whence the cult in Provence emanated, the smashing type originated; and it is even possible that the Milan covers were executed under the auspices of this same abbey in Marseilles.

The distinctive composition of the Baptism and its presence on the Werden casket, the Bodleian book cover, and the Berlin fragment, as well as on the Milan covers, places the origin of the whole group in that region where any one of the ivories may be shown to have originated. Since no doubt can be expressed as to the Western and Gallic origin of the Bodleian ivory²⁵ the fact that the same singular composition of the Baptism, as well as of the Massacre of the Innocents, occurs on that ivory as on the Milan covers, offers one proof of the Gallic origin of the Milan ivories. The features of the Baptism which are uniformly preserved on all the ivories and distinguish the scene from other representations are: the small Christ with long hair, the bearded John the Baptist wearing an exomis and carrying in his hand a shepherd's crook, and the waters of the Jordan piled up behind Christ like a waterfall.²⁶

The Western character of the scene on the Milan ivory is evinced by several details: Jesus is immersed in the water only to His ankles after the manner of representation on the Western sarcophagi while on the Eastern

²⁵ See p. 248 *sq.*

²⁶ See p. 76.

monuments He is waist deep in the Jordan; He is small of stature, which is a more common feature of Western than of Eastern scenes; the *exomis* which John wears instead of the *pallium* is more frequently used in the West than in the East.²⁷ The characteristic of the composition, however, which distinguishes the scene from all others and marks the group is the *pedum*, or shepherd's crook, which John carries. The only other example of the *pedum* in a scene of the Baptism is in a mosaic of Santa Maria in Cosmedin at Ravenna where the composition in other details is quite different. Another detail that clearly connects the scene with Provence is the manner of representing the waters of the Jordan as a waterfall. The waterfall occurs on no Eastern representations and appears on only one Roman sarcophagus. On the other hand it is a feature of the Baptism on two sarcophagi of Arles, on one of Soissons, one of Mas d'Aire, and on another of Madrid. With the exception of the *pedum*, the features of the composition on the Milan cover are those of the Baptisms on the sarcophagi of Provence.

Besides the last two scenes, the Virgin in the Temple, the Adoration of the Ox and the Ass, the Appearance of the Star, and the Adoration of the Magi, which all occur on two or more of the ivories of the group, may be attributed to Provence. In the first place the Virgin in the Temple, that appears on both the Milan and Werden ivories and nowhere else in the early Christian art of either East or West, occurs in an abbreviated rendering on a fifth century slab of the crypt of St. Maximin which at once associates the scene with St. Victor at Marseilles.

The representation of what is generally recognized as the Nativity but is really a scene of the Adoration of the Ox and the Ass, besides occurring in identical manner on the Milan, Werden, and Nevers ivories of the group and later on the Carolingian book cover in the Bodleian which was copied from the diptych of which the Nevers fragment was possibly a part, may be compared to a unique representation of the same scene on a sarcophagus of Arles.²⁸ The scene on the sarcophagus of Arles, in that the Magi are also figured adoring the Child, is a frank combination of the two adorations in a symbolical sense without any connection with the Nativity. That the same curious combination of the two adorations was in the mind of the ivory carver is shown by the way in

²⁷ See Table IV.

²⁸ See Fig. 14.

which he associated the two scenes; the Adoration of the Ox and the Ass, coming out of chronological order, occupies on one cover the large top panel while the same place is assigned to the Adoration of the Magi on the other cover.

The links that bind the Milan scenes to Provence are further strengthened by the Appearance of the Star to the Three Magi.²⁹ While this is combined with the Adoration on Roman monuments, it appears as a separate scene on the Milan covers, and in like manner on two sarcophagi of Arles.³⁰ Its rendering on the ivory, where the Magi wear odd notched chitons and look with marked gestures of surprise at the star above their heads, is identical, even to the cut of the chitons and the specific gestures of the Magi, with the sarcophagi representations. It is nearly identical, again, with the scene of three young Hebrews before the bust of the Assyrian king on a sarcophagus of St. Gilles.³¹ Besides the Appearance of the Star, which more firmly establishes the attribution of the Milan covers to Gaul, it is also to be noted that the very rare representation of the Widow's Mite, which appears on the covers, was seen in the fifth century by Perpetuus on the walls of the church of Saint Martin at Tours. As to the other scenes, which I have not attempted to attach directly to Provence, reference to the iconographical discussions in the first part of the book will show that none of them hinders the attribution and many of them show special details which are more similar to the scenes on Provençal sarcophagi than to those of Rome.

The eclectic character of these ivory covers, whose iconography is so largely that of Roman monuments and whose scenes yet present so many marks of Eastern influence, reflects quite naturally the eclectic nature not only of the art of Provence but also of the racial, social, and religious characteristics of the region.

On the other hand, the ornament on the Milan book covers manifests no conclusive arguments for the Provençal origin of the covers although it fully sustains the attribution. At first sight the curious use of *orfèvrerie cloisonnée* would seem to complicate the question of locating the ivories. In fact it has given rise to the suggestion that the lamb and cross may have been added some centuries after the covers were carved. This obvious solution of the difficulties is unsatisfactory, for it does not account

²⁹ See p. 34.

³⁰ See Fig. 26.

³¹ See p. 35.

for the framed spaces which the absence of the lamb and cross would have left vacant, and it should be resorted to only when it is proved that such gold work at the beginning of the sixth century was impossible. To Strzygowski, who believes that *orfèvrerie cloisonnée* originated in Armenia,⁸² its presence on the covers would tend to prove that they came from Asia Minor.⁸³

The Eastern origin of cloisonné is readily admitted. Both Molinier⁸⁴ and Kondakoff⁸⁵ agree in attributing its inception to Persia; and it was probably known and used in the Christian art of Constantinople as early as the time of Constantine.⁸⁶ There was, however, a marked difference between the technique of the cloisonné in gold that was brought into Gaul, as Molinier⁸⁷ and Lasteyrie⁸⁸ assert, by the barbarians from the north and the Byzantine process, which was later introduced from the south. The Northern method consisted in a cloisonné setting of either semi-precious stones or bits of colored paste in gold, while the Byzantine process was the usual pure enamel cloisonné in which the enamel was spread into small spaces of the design outlined by fine gold wires and was then polished down to a perfectly smooth surface. Inasmuch, then, as the cross on the Milan covers is made of square and circular stones set in gold, and the lamb, according to Dalton,⁸⁹ is made up of stones which have not been polished down to a flat surface, the use of this Northern and un-Byzantine process is consistent with the Provençal origin of the covers.

Moreover, the "barbaric art" of gold work found in the Merovingian graves of France is in many cases almost identical with the ornament on the ivories. The tomb of Childeric (d. 481) at Tournay contained the sword of a chieftain which has a hilt and handle decorated with a cloisonné not unlike that of the lamb on the Milan cover.⁴⁰ At Gourdon there was discovered a flat dish ornamented in the middle with a cloisonné

cross composed of alternating pieces of circular and rectangular stones or glass which is similar to the cross on the book covers. Other excavations scattered over France⁴¹ have disclosed numerous examples of this work whose fabrication may be dated from the fifth to the seventh century.⁴² There is also the testament of Perpetuus, which tells of the gold work which was done in Gaul as early as the fifth century,⁴³ and the evidence of Gregory of Tours that beautiful pieces of gold work set with stones existed in Narbonne and Avignon.⁴⁴ While Labarte would show that the earliest examples of this work in Gaul came from Constantinople, he points out that Gaul in the early Christian times had already acquired a great reputation in the art of goldwork and the cities of Arles, Rheims, and Trier had ateliers where work was done for the emperors.⁴⁵

It therefore seems justifiable, as far as the cloisonné work on the covers bears on the attribution, to assume that the Milan covers were executed in Provence for, if anything, this particular form of ornament appears to sustain the attribution. Even the point made by Strzygowski, that the lamb and the cross were Palestinian motives, does not bear on the question for Schönewolf has already remarked Syro-Palestinian influence on the Gallic sarcophagi in the frequent use of the "crux gemmata."⁴⁶ In fact, even if these motives be Eastern, the corresponding representation of the lamb on a sarcophagus from St. Maximin⁴⁷ would help confirm the attribution to Provence.

Aside from the cloisonné, the ornament on the Milan book covers is not particularly instructive in locating the ivories. The Corinthian capitals and the acanthus mouldings which frame the panels are simply a debased rendering of classical motives such as might be found in any artistic centre where Hellenistic traditions still survived. In the central panel the two curtains draped back to the columns, while a common enough motive in the East, was not very common on the monuments of Rome and seldom appears on the Roman sarcophagi. At the same time this motive occurs

frequently on the sarcophagi⁴⁸ of southern Gaul which show marked Eastern influence, including a sarcophagus of St. Maximin, and became later one of the most distinctive features of Carolingian art.

While the symbols of the Evangelists no doubt spread from Egypt and originated⁴⁹ from the liturgical cycle of Egypt, their use as personal emblems with the figures of the Evangelists, as they occur on the Milan covers, was Western and their first appearance with the Evangelists occurred in a mosaic of the Baptistry of St. John Lateran.⁵⁰ A very cogent argument against the suggested origin of the Milan covers in Asia Minor is the fact that in the Rossano Gospels from Anatolia the writing figure of the Evangelist Mark appears without the emblem.

The costumes of some of the figures on the ivories are either similar to the traditional dress of Gaul or like the dress seen on certain Gallic sarcophagi. During the early centuries of Christian art the form of dress was Hellenistic. In the sixth century, however, the rich Byzantine costumes of the Orient already appear in art. The first representation in Rome of the Madonna in the rich robes of a Byzantine empress is found in the sixth century at Santa Maria Antiqua and in Ravenna we see these new forms of dress in the mosaics of Sant' Apollinare Nuovo, and Sant' Apollinare in Classe. Marignan, in discussing the various aspects of Merovingian society,⁵¹ writes that the Gallo-Roman women wore the tunic with the long, straight sleeves, the dalmatica, the paenula, and the pallium; these different vestments were generally ornamented with embroidery. According to the same authority,⁵² the women also wore their hair either hanging loose upon their necks or bound in a knot on the top of their heads. Were it not for this description of the costume of the Gallic women, which so accurately accords with the dress of the young Virgin, in the two scenes of the Virgin in the Temple and the

⁴⁹ *Bys. Zeit.*, XV, p. 702.

⁵⁰ Garr., *op. cit.*, IV, pl. 239. While the mosaic is now destroyed, this method of depicting the Evangelists became customary in the West. In the East, however, the artists sometimes depicted the four symbols alone, often combining them in a single figure known as the Tetramorph, "but never, during the great period, associating them severally with the Evangelists" (C. R. Morey, *East Christian Paintings in the Freer Collection*, 1914, p. 39).

⁵¹ Marignan, *La Société Mérovingienne*, 1899, p. 127.

⁵² Marignan, *op. cit.*, p. 129.

Annunciation by the Spring, on the Milan covers, one would almost think her costume Byzantine. It accounts for the modish manner in which her hair is dressed and for the heavy embroideries which border her garments. Regarding the male garments as they appear on the covers, it is interesting to note that the costume of the soldiers of Herod in the Massacre of the Innocents is identical with the costume of the soldiers in the same scene on the sarcophagus of St. Maximin and is preserved in Merovingian times in the miniatures of the Codex Purpureus of Munich and also in the Judgment of Solomon on a Carolingian ivory in the Louvre.⁵³ Besides the dress of the Magi, whose similarity in costume to the Magi on Provençal sarcophagi has already been mentioned, the costumes of the other figures are either the regular Hellenistic dress used in the art of the period or the traditional dress for particular figures.

The date of the Milan book covers may be estimated fairly closely to be about the beginning of the sixth century. The earliest date which has been assigned is the fifth century and the principal authorities to sustain it are De Rossi,⁵⁴ Dobbert,⁵⁵ and Stuhlfauth.⁵⁶ Bugati⁵⁷ held that they were executed about the end of the fifth century or the beginning of the sixth century; Kondakoff⁵⁸ and Schmid⁵⁹ assign them to the beginning of the sixth century; Labarte,⁶⁰ Westwood,⁶¹ and Dalton⁶² attribute them to the sixth century while Grimoüard de Saint-Laurent⁶³ puts them as late as the close of the same century. The average then, of the dates which have been assigned to the covers would lie between the close of the fifth century and the beginning of the sixth century. Such a date, c. 500 A. D., may be sustained on other grounds than the appearance of the ivories and the vague criteria of style.

In the first place, most of the scenes on the covers dealing with the early life of Christ and the Virgin are based upon the account in the Latin Pseudo-Matthew. By the end of the fifth century the popularity of the Eastern apocryphal gospels in the West had become so great that Pope Gelasius (492-496) issued a decree against their use, which was recalled under the following pontiff. The Gospel of Pseudo-Matthew, clearly the source of many scenes on the Milan covers, was compiled during the course of the fifth century, according to the general view, and probably, as I have pointed out, at the beginning thereof.⁶⁴

Furthermore, the first feast of the Virgin was not introduced from the East into Gaul before the sixth century and it is doubtful if a work like the Milan cover, where two special scenes of the Virgin are represented, would have been executed much before her cult was established. That the covers could not have been carved very late in the sixth century is shown not only by the fact that the style is of the early sarcophagi of the West but also because they present so many types of scenes peculiar to the sarcophagi of the fourth and fifth centuries and show only traces of Eastern iconography. Also, by the fifth century in Provence we have seen this same mingling of Eastern and Western iconography and ornament on the sarcophagi from which some of the peculiar scenes of the covers, as the Virgin in the Temple, the Massacre of the Innocents, the Appearance of the Star, and the Entry into Jerusalem, were derived. From the dependence of the covers on the Latin Pseudo-Matthew, from the Virgin scenes, and from their relation with the best sarcophagi types of the fifth century, I would, therefore, place the execution of the Milan book covers about 500 A. D.

IV

WERDEN CASKET IN THE VICTORIA AND ALBERT MUSEUM

Casket	South Kensington
Date... 500-525.	Victoria and Albert Museum.

In the Victoria and Albert Museum in South Kensington there are preserved three sides of a small ivory casket (Figs. 157-159) which came from

⁶⁴ See p. 191.

the abbey of Werden in Westphalia.¹ Commencing with the long panel (Fig. 157), which was probably the front of the casket, and reading to the left, the scenes run as follows: the Virgin in the Temple, the Visitation, the Departure of the Virgin from the Home of Elizabeth, Joseph's Dream, and the Annunciation by the Spring. The short panel of what was the left hand side of the box is lost but, from the sequence of the scenes and from their similarity to the scenes on the Milan covers, it must have borne the representation of the Massacre of the Innocents. On the other long panel (Fig. 158) occur the Appearance of the Star to the Magi, the Adoration of the Ox and the Ass, and the Adoration of the Magi.

FIG. 157. S. KENSINGTON: VICTORIA AND ALBERT MUSEUM,
IVORY CASKET FROM WERDEN. FRONT.

Finally, on the short panel (Fig. 159) of the right side of the casket are depicted the coming of the Pharisees and Sadducees to John the Baptist at the Jordan, the Laying of the Ax to the Unfruitful Tree, and the Baptism of Christ.

The principal reason for connecting the Werden casket with Provence is its marked similarity to the Milan covers. While some of the scenes are different and there are certain slight variations in the iconography of the scenes which are common to both ivories, the likeness of the two works is so close that several authorities have considered them to have been carved by the same hand and all agree that they came from the same art centre. Inasmuch as the greater part of the scenes on the casket are the same in subject and rendering as those on the covers, the casket necessarily shows an eclectic iconography, a tendency to follow the account of the scenes in the Gospel of Pseudo-Matthew, and is to be attributed along with the Milan covers to a Provençal atelier. Such new scenes as appear on the casket are so uncommon in early Christian art of the sixth century

¹ Garr., *Storia*, VI, pl. 447/1, 2, 3.

that they may well be neglected as far as the solution of the origin of the box is concerned.

The scene of the Virgin in the Temple is, with the exception of the priest who reads by the steps of the temple, similar to the same scene on the Milan cover. While it has been interpreted by Westwood² to represent Zacharias, book in hand, standing by the temple, such an interpretation, as well as that of Stuhlfauth,³ who calls the scene "the annunciation of the birth of Mary to Zacharias," is impossible, for no recognition is made of the figure of the young maiden toward whom the angel looks as he points heavenward. That this maiden is meant to represent the Virgin is partly shown by the similarity of her costume and hair with the figure of the Virgin in the scene of the Annunciation. The interpretation of De Waal⁴ and Leclercq,⁵ that it depicts the Presentation of the Virgin in the Temple, is, so far as the original meaning of the scene goes, the same as my own, which has already been set forth.⁶ The assertion of Stuhlfauth that the explanation offered by De Waal is impossible because the Presentation of the Virgin was unknown in early Christian art does not take into account the fifth century slab found at St. Maximin in Provence, where the Virgin in the Temple is represented with an explanatory inscription. While the priest, as I have said, is omitted in the scene on the Milan covers (see Fig. 1), the two renderings are otherwise identical and, in spite of this one difference, are clearly related. With this in mind, it is interesting to note that the source of the scene is the Gospel of Pseudo-Matthew as in the case of so many of the scenes on the Milan covers, a fact which is also pointed out by De Waal.

Following the Virgin in the Temple should come the Annunciation by the Spring; but the demands of composition were such that apparently the artist chose to use this scene as a suitable terminus for his panel. Otherwise, the scenes as they are depicted on the casket adhere to the order of events as related in the Gospels. Of the Annunciation nothing more can be said than has already been advanced regarding the same scene on the

Milan cover (see Fig. 4), for both are identical even to the embroidered dress of the Virgin.⁷

The Visitation, where Mary and Elizabeth meet before a building with two towers, which represents the "city of Juda" wherein Elizabeth dwelt,⁸ does not occur on the Milan covers. Elizabeth, standing with her back to the towers as she extends her arms to the approaching Virgin, wears a heavy veil after the fashion of a matron, and a mantle whose long sleeves hang down at her side. The Virgin, on the other hand, as befits her age and position at the time, is clothed in more simple and youthful garments and her hair is dressed in a more stylish manner. As a means of locating or dating an early Christian monument, the Visitation is wellnigh useless. Outside the fact that the scene does not occur before the sixth century and only appears on monuments which were either of Eastern origin or may be connected with the East, it offers no distinctive iconography. While there have always been two methods of representing the scene, one, as on the ivory, where the two women meet without embracing, and the other where they clasp each other in their arms, neither type seems to have been peculiar to any specific region or century. Since the greater part of the examples occur on monuments from Syria or Egypt, we may only assume, if we accept the Provençal origin of the Werden casket, that the scene, like so many others we have seen in Provence, is to be accounted for by the large Oriental population in Provence and the intimate relation of the region with the East.

The Visitation is followed by a scene which is even less instructive and helpful and warrants only the briefest description, as it is unique in the Christian art of the first eight centuries, save for the curious fresco of the Departure of the Virgin from Elizabeth's House, at Bawit.⁹ The two standing figures, it is to be noted, are the same in every detail of their costumes as the two women in the Visitation, the figure at the right corresponding in respect to her heavy veil and matronly garb to the mother of John, while the other woman at the left is similar, in her more maidenly attire, to the Virgin. The composition of the group is, moreover, similar to that of the Visitation, save for the fact that the two women instead of ad-

⁷ See Figs. 4 and 5.

⁸ This is the interpretation given to the scene by Westwood (*op. cit.*, p. 42) and by Stuhlfauth (*op. cit.*, p. 72).

⁹ Clédat, *C. R. Acad. Inscr.*, 1904, p. 525.

vancing to greet one another appear to have turned their backs as if the event commemorated were a farewell. This representation, then, can only be explained as the departure of Mary, after her three months visit, from the home of Elizabeth. If this is the correct interpretation, the source of the scene, as of the Visitation, would probably be the account in the Gospel of Luke (i, 56).

After the departure of the Virgin there is depicted on this panel the Appearance of an Angel to Joseph. While this does not occur on the Milan covers, there are reasons for connecting it with Provence. In the first place it follows the account in both the Latin Pseudo-Matthew and the Gospel of Matthew, where it is related that Joseph, being of a mind to put Mary aside when he found her upon her return from the home of Elizabeth heavy with child, was visited in his sleep by an angel who assured him that he need have no fear. Furthermore, the only example of the scene which is similar to that on the ivory occurs on a sarcophagus of Le Puy¹⁰ (Fig. 154). Besides being very rare in early Christian art, its narrative character and lack of symbolism would suggest its origin in a region where the Oriental fondness for historical representations of Biblical events was more active than in Rome. Moreover the other examples of the scene which appear on Egyptian monuments present a rendering quite different from that on either the ivory or the sarcophagus. On the Maximianus chair (Fig. 150) and in a fresco of Antinoë (Fig. 151), Joseph sleeps in Eastern fashion on a mattress. On the ivory, however, Joseph lies on the ground, while on the sarcophagus he is curled up on a little couch. His costume on both the ivory and the sarcophagus is the same, while it is different from his dress on the two Egyptian examples. The type would then seem to be a local and Gallic one.

The next scene occupied the short panel of what was the left side of the casket. This panel, however, is gone and, although I think from the sequence of the scenes on the casket and their general similarity to those on the Milan covers that it contained the Massacre of the Innocents, it is useless to speculate. Passing, then, to the long panel (Fig. 158) which was at the back of the box, the next scene is the Appearance of the Star.

The Appearance of the Star to the Three Magi is, in the first place,

¹⁰ Le Blant, *Les sarcophages chrétiens de la Gaule*, pl. XVII/4.

identical with the scene on the Milan covers (see Fig. 27), even to the attitude and odd chitons of the Magi; second, like the scene on the covers, it is similar to the rendering of the Appearance of the Star on the Provençal sarcophagi and is, therefore, to be connected with that section of southern Gaul where the sarcophagi and the covers were executed.¹¹

The Adoration of the Ox and the Ass, which is next in sequence, as in the case of the rendering of the same scene on the Milan covers (see Fig. 12), which it seems to follow, may be connected with the account of the event in the Latin version of Pseudo-Matthew, and related to the

FIG. 158. S. KENSINGTON: VICTORIA AND ALBERT MUSEUM, IVORY CASKET FROM WERDEN. BACK.

representations on the sarcophagi of Provence.¹² Its close similarity to the Milan scenes appears in practically every detail of the composition, but especially in the presence of Joseph carrying a curiously shaped saw and in the marked form of the manger crib covered with straw or a soft material whose folds radiate from under the Child. Whatever is true for the Milan scene holds good, then, for the representation on the casket.

The relationship between the Adoration of the Magi on the casket and the same subject on the Milan covers (see Fig. 35) is apparent. As on the Milan ivory, the Virgin, heavily veiled and seated on a cathedra with a round back like those on the Roman sarcophagi, rests her feet on a suppedaneum and holds in her lap the young Jesus who is clothed in a long tunic as a child of two years; from the left the Magi, dressed in the distinctive notched chitons and flowing chlamydes, advance in a line toward the Child, bearing their gifts. The fact that the gifts of the Magi differ in the two representations is of no importance, for no artistic tradition as to the kinds of gifts which the Wise Men brought from the East was constantly maintained.¹³ The type, where the Magi are all beardless¹⁴ and advance in a line, is the Hellenistic type peculiar chiefly to the

¹¹ See p. 216.

¹² See p. 215.

¹³ See p. 40.

¹⁴ It has been said that the first Magus is bearded. Since the ivory has been badly

sarcophagi representations in the West.¹⁵ The rendering on the casket appears to have been based rather on the Adoration of the Milan book covers than on any text, and the characteristic which connects this representation on the Werden ivory with Provence is its obvious and symbolic combination of the Adoration of the Magi¹⁶ with the Adoration of the Ox and the Ass. This symbolic combination, while occurring on the ivories, appears most convincingly on the sarcophagi of Provence.¹⁷

Finally, on the last panel (Fig. 159) there is represented a combination scene wherein one part illustrates the words of John the Baptist when he was preaching to the people of Judea on the banks of the Jordan prior to the coming of the Saviour, and the complementary portion depicts the subsequent Baptism of Jesus. The scene at the left of the panel shows three men fleeing from the gates of a city and approaching one who buries his ax in the coils of a viper wrapped about the roots of a tree, while a second man, on the further side of the tree, raises his ax in preparation for cutting down the unfruitful tree. The representation is a direct pictorial rendering of the words of John, recounted in the third chapter of Matthew and Luke: "Oh generation of vipers, who has warned you to flee from the wrath to come? . . . and now also the ax is laid unto the root of the trees: therefore every tree which bringeth not forth good fruit is hewn down and cast into the fire." While unique, to my knowledge, among the scenes of Christian art before the ninth century and, therefore, valueless for comparative iconography, this composition shows that the casket was executed in an art centre which was not subservient to established traditions and only makes more manifest the eclectic and varied nature of this school of ivory carvers in Provence.

The Baptism, which completes the scenes on the Werden casket, offers a composition which, regardless of two added features, resembles so closely the scene on the Milan covers as well as on the other ivories of the Provençal group, that I have called the type Provençal.¹⁸

Although the Werden scene is obviously to be connected with the type

worn the original does not give, as a photograph does, the impression that the Magus wears a beard. Because the three Magi in the scene of the Appearance of the Star on the same panel are beardless and because the peculiar length of chin of all the faces on the casket gives the impression of beards, I believe that what looks to be a beard in the photograph is no more than a few irregularities caused by wear.

¹⁵ See p. 38.

¹⁶ See p. 22.

¹⁷ See Fig. 14.

¹⁸ See *Baptism*, p. 76, and *Milan Book Covers*, p. 214.

on the other ivories of the group, it has two added features in its composition which must be explained. The cruciform nimbus on the head

FIG. 159. S. KENSINGTON: VICTORIA AND ALBERT MUSEUM,
IVORY CASKET FROM WERDEN. SIDE.

of Christ must have been inscribed on the ivory at a later date, for it is not given to Christ in this scene on the Western monuments before the eighth century and does not appear in Oriental Baptisms until after the sixth century.¹⁹ The other odd feature is the personification of the Jordan, a jovial reminiscence of a pagan deity who sits upon a mass of rocks with his arms full of water plants and has at his feet an overturned urn from which the waters of the river flow down the side of the hill. The use of the personification of the river in this scene was, in all probability, an original characteristic of the Alexandrian-Coptic representations,²⁰ although as early as the fifth century the Jordan was personified in both the mosaics of S. Giovanni in Fonte and S. Maria in Cosmedin at Ravenna.²¹ The custom of personifying rivers and mountains was in itself a tradition introduced from the Hellenistic centres of the Orient into the West at an early date. While its use in the Christian scenes of the West was rare, there occurs on a sarcophagus of Syracuse, in the scene of Moses Striking Water from the Rock, a personification of the mountain.²² As a Hellenistic feature of uncertain origin its appearance in Provence is no more surprising than its use in any other art centre. From Gallo-Roman times Provence was in intimate relationship with Alexandria and the other Hellenistic cities of the East and the Provençal feature in the scene of the Baptism, of representing the waters of the Jordan piled back upon their source until they appear like a cataract, was derived from an Eastern account of the Baptism.²³

So far a review of the iconography on the Werden casket has not

¹⁹ See Table IV.

²⁰ See p. 79.

²¹ See p. 82.

²² See p. 12, note 7.

²³ See p. 81.

revealed any new links which attach the ivory or the group of ivories to Provence. Nevertheless, the comparison of such scenes as the Virgin in the Temple, the Annunciation, the Appearance of the Star, the Adoration of the Animals, the Adoration of the Magi, and the Baptism, with the same scenes on the Milan covers has shown beyond question that the origin of the Werden casket is the same as that of the Milan book covers. While all the authorities agree as to the close relationship between the two ivories and Westwood²⁴ and Strzygowski²⁵ see in the casket the work of the same hand that carved the Milan covers, Schmid²⁶ and Stuhlfauth²⁷ notice certain variations in the execution which make it necessary to suppose that a second artist did the casket. They assume, however, that both artists either worked from the same model or that the Werden casket was a weaker copy of the covers. Therefore, if the attribution of the Milan covers to Provence has been sustained in the previous chapter, the same origin must be ascribed to the Werden casket. None of the new scenes occurring on the casket and not on the covers has offered any iconography inconsistent with the traditions of Provence or incompatible with the eclectic art of that country. Moreover, the scene of Joseph's Dream finds its closest parallel on a sarcophagus of Le Puy and gives some evidence, at least, of the Gallic origin of the casket.

A small but important detail on the ivory is the structure with a façade flanked by two round towers in the scene of the Visitation (Fig. 157. Strzygowski, in discussing the origin of Romanesque art in the West, ascribes the Werden casket to Milan and claims the two-towered façade as an Oriental characteristic.²⁸ In evidence of this he cites the prevalence of this architectural form in the churches of Syria, its use on the Brescia casket which he ascribes to Anatolia, and its occurrence on the doors of Santa Sabina which were also of Eastern fabrication. At once we may ask, on the same grounds, why this feature could not have been introduced into Marseilles by Cassianus or one of his Eastern monks? Marseilles, as well as the church and monastery of St. Victor, was as closely connected with the Orient and with Syria as was Milan and any of its churches.

²⁴ Westwood, *op. cit.*, p. 42.

²⁶ Schmid, *Die Darstellung der Geburt Christi*, p. 109.

²⁷ Stuhlfauth, *op. cit.*, p. 73.

²⁸ Strzygowski, *Kleinasien*, pp. 214-215.

The question answers itself; for the use of the two-towered façade to represent a city was known and used in Gaul. On a Merovingian gem (Fig. 160) is represented a façade flanked by two towers not unlike those on the ivory.²⁹ On either side of the building stand the martyrs Gervasius (GERBA) and Protasius (PROTA), as the inscription tells us, and below is the inscription CAENOM(ANI), the tribe whose capital became the city of Le Mans. Thus the building on the gem does not neces-

FIG. 160. ENGRAVED GEM: STS. GERVASIUS AND PROTASIIUS BEFORE THE CITY OF LE MANS.

sarily represent a church, as one might imagine, but symbolizes the city of Le Mans where the remains of Gervasius and Protasius were preserved. This same use of a towered façade to symbolize a city occurs on the cover of the Lorsch Gospels, of the eighth or ninth century, in the Vatican; Herod is represented seated before a façade with flanking round towers as he receives the three Wise Men who are on their way in search of the new born Babe.³⁰ It is to be noted that the towers on all these Western monuments are round, while the towers on the Syrian churches are usually square, as also on the Brescia casket and the doors of Santa Sabina. It has been pointed out by Enlart that the circular tower was commonly used in Carolingian times in preference to the square tower and that it seems to have been more ancient in Gaul than the square form.³¹ Since the façade on the Werden casket must be interpreted to represent the city of Juda where Elizabeth lived, there is more reason for associating the circular towers with Gaul than with either Milan or the East.

While the relation of the Werden casket to the Milan covers is obvious, not only in iconography but also in the ornament and costumes of the fig-

²⁹ Garr., VI, pl. 478/40.

³⁰ Garr., VI, pl. 457/2.

³¹ Enlart, *Manuel d'archéologie française*, I, pp. 124-125.

ures, I would say neither that they were by the same hand nor that the Werden casket was a weaker copy. It is true that there do appear certain differences in the actual carving of the two ivories; the figures on the Milan covers are far more flat and sketchy in their rendering and they entirely lack the snap and form of those figures on the casket where there seems to have been an effort to obtain plastic effect and action. Nor do I feel that the casket can be called a "weaker copy." While a less pretentious work than the covers, it seems to me to be more virile and to show in incipient form those characteristics of style, such as the exaggerated animation and movement, which were later apparent in Carolingian art.

Without doubt the casket was executed at a date posterior to the carving of the covers. The diminished Hellenism of the style would show it, as also would the fact that on the casket the story of the Virgin is more fully developed than on the Milan ivories. Although somewhat later, the casket, nevertheless, could not have been done much after the beginning of the sixth century. The style is not Carolingian, and it is impossible to ascribe a work of this character to the seventh or eighth century. Therefore, accepting the date of the execution of the Milan book covers as about the year 500, I consider the Werden casket to have been carved at a time well within the first half of the sixth century.³²

V

DIPTYCH IN THE LIBRARY OF ROUEN

Diptych.

Rouen

Date, c. 475 A. D.

Library.

The diptych of Rouen,¹ which is today in the town library, has been in the cathedral of that city at least since the twelfth century when it was used to adorn the binding of a manuscript containing a miscellany of documents relating to the episcopal see of Rouen.² Each leaf (Fig. 161) is ornamented with a pediment sustained by channelled pilasters with Corinthian capitals; in each tympanum is figured a shell and on the raking cornices

³² This date is the same as that given by Stuhlfauth, Schmid, and De Rossi.

¹ C. de Linas, *Gazette archéologique*, 1886, pl. IV; Laurent, *Les ivoires prégothiques*, figs. 7, 8.

² De Linas, *op. cit.*, p. 25.

FIG. 161. ROUEN: PUBLIC LIBRARY, IVORY DIPTYCH. SAINTS PETER AND PAUL.

stands a bird. Within the niches are two apostles: St. Peter, who is nimbed and holds in his hand a key, stands in a three-quarters position; St. Paul, who is also nimbed and advances toward the right holding in his left hand a roll, while with his right hand he makes a gesture of either speech or blessing, is designated in the customary fashion by his bald head and long beard.

The striking similarity, which has been frequently remarked by art critics, of the two apostles on the ivories to the rendering of the same Saints on a sarcophagus of St. Victor at Marseilles (Fig. 162) together with the resemblance of the figure of Paul to the same figure on another sarcophagus from St. Victor,³ indicate that the Rouen diptych must have been executed in Saint Cassianus' monastery of St. Victor at Marseilles. The connection with Marseilles is sustained by the style and architectural details of the ivories which are similar to the pseudo-Eastern sarcophagus type of Provence. The face of the first named sarcophagus from Marseilles is broken into seven rectangular panels, of which the last at the left is now gone. The central panel is framed by Corinthian capped pilasters. The figures represent Christ and six of His apostles arranged in groups of three on either side. In the space to the left of the Saviour is the figure of St. Paul executed in a manner almost identical with the same personage on the diptych, and in the panel to the right is St. Peter.

That some relation must have existed between the sarcophagus and the diptych has already been recognized by Molinier,⁴ Laurent,⁵ and Dalton.⁶ Molinier, who praises highly the fine workmanship of the ivories which shows that the artist had under his eye a good model, suggests that whoever, at the end of the Roman period, executed the ivories was inspired by the same model as the artists who carved the sarcophagus. Instead of agreeing with De Linas, who first published the ivories and held them to be the work of Greek image makers, he prefers to consider them the product of Occidental artists, either Italian or Gallo-Roman. Stuhlfauth,⁷ on the other hand, who ignores the parallel with the sarcophagi, claims, on the basis of the architectural niche and a vague resemblance of the

⁴ Molinier, *Hist. gén. des arts appliqués*, I, *Ivoires*, p. 53.

⁵ Laurent, *op. cit.*, pp. 23-25.

⁶ Dalton, *Byzantine Art and Archaeology*, p. 194.

ivories to the Archangel panel⁸ in the British Museum, that the diptych was a product of Byzantine art and done by a Greek artist.

While accepting a direct relation between the figures of the sarcophagus and the ivories, Laurent says that the type of the figures is not at all the same as the ordinary type of the Western sarcophagi and that both monuments show the influence of Oriental art upon the West. In explaining the Eastern type of figures, as he calls them, on the sarcophagus, he propounds three theories. First, the sarcophagus may have been done in the East. Then, on the contrary, it may have been executed in Gaul, the sculptor copying the ivories. Or better, as Molinier thinks, both the sarcophagus and the ivories were inspired by the same model.

FIG. 162. MARSEILLES: MUSEUM, SARCOPHAGUS. CHRIST AND APOSTLES.

This last conclusion of Molinier's seems to me to be correct, save that he has not sufficiently emphasized the connection of both ivories and sarcophagi with Marseilles. In the first place, the sarcophagus of St. Victor, on which Peter and Paul are represented, is not in the least similar, as Laurent notes, either to the characteristic Roman sarcophagi or to those of the atelier of Arles which followed Roman models. There was, however, a second school of sarcophagus carvers in southern Gaul which did not participate in the styles of Arles and Rome, but attached itself, by contact more or less direct, to the Christian art of the Orient. This Eastern art stream, coming largely from Syria and transmitting to the Provençal sarcophagus carvers many Syrian motives, spread into Gaul from Marseilles.⁹ While the vine motive and the conch shell borne by pilasters are not features

⁷ Stuhlfauth, *Elfenbeinplastik*, p. 176.

⁸ Garr., *op. cit.*, VI, pl. 457/1.

⁹ See *Orientalizing of Gaul*.

found upon Roman sarcophagi, they are characteristic of the sarcophagi of southern Gaul.¹⁰ The setting of the figures in panels or shallow niches and the general low relief of the carving on the St. Victor sarcophagus are again features peculiar to this Provençal type.¹¹

Accepting, then, a relationship between the sarcophagus and the diptych, it is impossible, when we consider the similarity of the architectural details as well as of the figures, to suppose that the Rouen diptych was carved by an Italian artist. On the other hand, it is equally unlikely that the diptych was executed in the East, or was even copied, at least directly, from an Oriental model. It is true that niches with birds on the pediment, as they occur on the ivories, are Eastern features, but they were also common in Provence. Furthermore, the niche on the diptych with only a small shell ornamenting the centre of the tympanum is quite different from the customary Eastern niche wherein a large conch shell, supported by columns with spiral channellings, takes the place of a pediment. The types of the two apostles, Laurent and Stuhlfauth to the contrary notwithstanding, are not primarily Eastern. Comparing the two Saints with the same personages on the Maximianus chair,¹² and the Tongres-Brussels diptych,¹³ there appear certain marked differences. On the Eastern ivories St. Paul wears a pointed instead of a round beard and his head is not so bald as it is on the Rouen diptych. The apostles on all the Oriental ivories are figured in a rather rigid frontality while the profile and three-quarters pose of the two Saints on our diptych recall a much finer Hellenistic tradition. The costume, also, of these apostles does not agree in the least with that of the figures on the Eastern ivory carvings. Thus, although there are certain Eastern reminiscences on the Rouen diptych, there is nothing, to my mind, which justifies either attributing it to the East or assuming that it was copied from an Eastern model. Moreover, if the figure of Paul on the diptych be compared with the same personage on a sarcophagus of St. Victor¹⁴ and a sarcophagus of Aix¹⁵ it will be seen that the heads, postures, and costumes are practically iden-

¹⁴ Le Blant, *op. cit.*, pl. XVI/1.

¹⁵ Le Blant, *op. cit.*, pl. LI/2.

tical on all three examples. The analogies, then, are all with Provence and, what is more, with monuments which are to be connected with the church and monastery of St. Victor at Marseilles.

By thus attributing the Rouen diptych to Marseilles the objections to its Provençal origin are to a large extent removed. Provence, we have seen, was overrun with Greeks and Syrians, and the church of St. Victor, which Cassianus, after prolonged sojourn in the East, founded about 414, was more intimately connected with the Orient than with the West.¹⁶ Therefore the conviction of De Linas and Stuhlfauth that the diptych came from the hands of a Greek artist and the contention of Laurent that it was copied from an Eastern model, may be all admitted without weakening the attribution to Marseilles or discarding Molinier's opinion that it was carved by a Gallo-Roman.

The date of the Rouen diptych should be somewhere about the beginning of the last quarter of the fifth century. As compared with the Milan book covers, the Rouen diptych presents a style quite similar in general lowness of relief, in the channelled pilasters with Corinthian capitals, and in the egg and dart mouldings, though it seems superior in design and workmanship. The freedom of draperies, the careful modelling, the details of the costumes such as the tassels which ornament the angles of the pallium, and the exactitude of the movements, point to a date earlier than the Milan covers before art had begun to abandon the finer technique and classical freedom of the Hellenistic examples for the rather slack sketchiness of the Oriental style. Besides the style we have the approximate date of the sarcophagus in St. Victor for purposes of comparison. Le Blant in publishing the sarcophagus intimates that it could not have been earlier than the end of the fourth century¹⁷ and De Rossi states that the particular form of the cruciform monogram carved on it originated in Gaul in the first half of the fifth century, or at the earliest at the end of the fourth century.¹⁸ Therefore since the sarcophagus was found in the crypt of St. Victor and as there is every reason to suppose that it had been executed in Marseilles for that church, it would be quite consistent to place its execution after 414, when the church and monastery were founded by Cassianus. Inas-

¹⁶ See p. 196.

¹⁷ Le Blant, *op. cit.*, p. 47.

¹⁸ De Rossi, *Bull. di arch. christ.*, 1880, p. 155.

much as it is not likely that a school of art would have grown up around a new order until some time after it had been thoroughly established, and as the style of the monogram was more common at the end of the fifth century than at its beginning, I am inclined to believe that the sarcophagus was carved between 450 and 475 A. D. and that the Rouen diptych could not have been done much later. Moreover, the style and execution of the diptych, as in the case of the Milan diptych, are less plastic, bold, and hence less Hellenistic than the work on the Berlin and Nevers fragments, which in the next chapter I shall show to have been executed about the second quarter of the fifth century.

VI

TWO IVORY FRAGMENTS IN THE BERLIN AND NEVERS MUSEUMS

Two Diptych Fragments.

Berlin and Nevers
Museums.

Date, c. 450 A. D.

Among the ivories to be considered in the Provençal group are two fragments, of which one¹ is the side panel of a five part diptych (Fig. 163) and is preserved in the Berlin Museum; the other, possibly belonging to the same diptych, is in the Museum of Nevers (Fig. 164). The ivory fragment which is now in the Berlin Museum was previously in the possession of M. Mallet at Amiens. The three scenes on this panel are separately framed by an egg and dart moulding, and on the right hand edge of the ivory is a narrow bead and reel moulding which originally surrounded the whole diptych. Reading down, the scenes are the smashing type of the Massacre of the Innocents, the Baptism, and the Miracle of Cana. That the Nevers fragment² was possibly part of the same diptych as the Berlin panel is suggested not only by their similarity in style and in

¹ Haseloff, *Jb. Preuss. Kunsts.*, XXIV, 1903, p. 47 sq; Abbé Drival, *Revue de l'art chrétien* 2e Série (1875), pl. XIX; Stuhlfauth, *Elfenbeinplastik*, p. 75, pl. IV/1; Strzygowski, *Kleinasiens*, p. 199; Fleury, *La Messe*, VI, p. 119; Dalton, *Byz. Art and Arch.*, p. 203.

² Barbier de Montault, "L'ivoire latin du musée de Nevers," *Bulletin Monumental*, 1885, no. 8; A. Darcel, *Trésor des églises et objets d'art français appartenant aux musées exposés en 1889 au palais du Trocadéro*, vol. I, no. 14; Haseloff, *op. cit.*, p. 52, gives the dimensions of both fragments and points out the relation; Molinier, *Ivoires*, p. 60, note 6; Stuhlfauth, *op. cit.*, p. 77, wrongly attributes the ivory to Toulouse; Dalton, *op. cit.*, p. 203.

the mouldings which they both employ, but also by the measurements of the two ivories. The dimensions of the Nevers fragment, which are 7.4 by 12.9 cm., indicate that it might fit on to the top of the Berlin fragment, whose dimensions are 20 by 8.1 cm. Thus the Adoration of the Magi on the Nevers fragment would be set above the Massacre of the Innocents on the Berlin panel, while the Nativity, with the missing Joseph and Mary (p. 18), and a third scene, would complete the crowning frieze of one leaf of a five part diptych.

The intimate relation of the Nevers and Berlin fragments with the Milan book covers and the Werden casket in the South Kensington Museum has been readily accepted by all the writers on these ivories.³ In fact, the iconographical connection between them is so apparent that they have all been considered products of the same school. While attributing both fragments to the same atelier as the Milan covers, Stuhlfauth failed to recognize the relation between them and dated the Nevers panel as the earliest example of what he called a Milan school, while he set the execution of the Berlin fragment between the Milan covers and the Werden casket.⁴ His principal reason for dating the Berlin ivory after the Milan covers and before the Werden casket was the fact that the Saviour wears a plain nimbus on the Berlin panel and a cruciform nimbus on the Werden casket. In marked contrast with Stuhlfauth's views is the theory of Haseloff, who attributes the whole group of ivories to Rome and dates the fragments in the closing years of the fourth century. Inasmuch as a modification of Haseloff's theory seems to me to be the truth, I will first give his reasons for placing the execution of the Berlin fragment at Rome and for dating it so long before the time when the Milan covers are supposed to have been done.

It is at once apparent, when compared with the Milan covers, that the Berlin and Nevers ivories are superior in workmanship and must have been done at a time when better traditions still existed among the ivory craftsmen. To find a working basis from which to approach the date and place of execution of the Berlin fragment, Haseloff traces the development of ivory carving in Rome. Beginning with the Symmachi diptych of either

FIG. 163. BERLIN MUSEUM, IVORY. MASSACRE OF INNOCENTS,
BAPTISM, MIRACLE AT CANA.

392-394 or 401,⁵ he follows the continuation of certain ornamental motifs and points of style, through the Probianus diptych of the latter part of the fourth or the very first of the fifth century,⁶ the "Lampadiorum" diptych at Brescia of the middle of the fifth century,⁷ to the Trivulzio group which according to him consists of the leaf with the scene of the Holy Women at the Tomb, in the collection of Prince Trivulzio at Milan,⁸ the four plaques, with scenes of the Passion, in the British Museum,⁹ and the three panels, with scenes from the lives of Moses, Paul, and Peter, in the same museum.¹⁰

When Haseloff contrasts the two fragments with the Trivulzio group, he finds that they are cruder and smoother in execution and differ in the construction of the figures and in the handling of the draperies. But when the same fragments are compared with the pagan group of consular diptychs, they appear to be remarkably similar to the Probianus diptych. They are similar to this diptych in the broad, flat background behind the figures, in the shape of the heads, and in the treatment of the hair, hands and costumes. Therefore, from this marked likeness to the Probianus diptych and from the fact that after the beginning of the fifth century all the Roman diptychs become very crude, flat, and inferior,¹¹ he attributes the Berlin and Nevers fragments to a period in Rome just before the date of the Probianus diptych, which would have been the end of the fourth century. Thus, according to his theory, these ivories were the earliest examples of a Roman school of Christian ivory carvers who later produced the Milan covers and the Werden casket. This connection of the group with Rome would be further borne out by the fact that the Milan covers have the same outer moulding of palmette ornament which occurs on the Symmachi diptych, the Probianus diptych, and the Trivulzio ivory.

While keeping in mind the analogies which Haseloff has shown to exist between the two fragments and the Roman ivories of the first part

¹¹ Haseloff, *op. cit.*, pp. 59-60, cites as examples of this decline in Roman ivory carving the Basilius diptych of the year 480, the diptych of Boëthius of 487, and the Orestes diptych of 513.

of the fifth century, I wish to consider their iconography before continuing the discussion of style. The Adoration of the Ox and the Ass on the Nevers panel,¹² of which only half the scene is preserved, is the same Provençal type, following the account in Pseudo-Matthew, which occurs on the Milan book covers and the Werden casket.¹³ Even in the half-scene there are figured the stable, the adoring animals, and the distinctive stone crib which we have seen were peculiar to the group. The Adoration of the Magi on the same panel is again similar in iconography to the Adoration on the Milan covers.¹⁴ In both examples the Virgin is seated in a high backed, round headed cathedra, the Magi are dressed in the curious tri-notched chiton which I have shown to be distinctive of the monuments of Provence,¹⁵ the Magi offer practically the same gifts consisting of two platters of uncertain objects and a cornucopia, and on both monuments the scene is set in a house.¹⁶ Furthermore, the combination of the Adoration of the Ox and the Ass with the Adoration of the Magi I have already pointed out as peculiar to the Provençal monuments.¹⁷

Turning to the iconography of the Berlin fragment, the scene of the Massacre of the Innocents besides presenting the best proof of the Provençal origin of the ivory also offers a *terminus post quem* for its date of execution. The "smashing" Massacre of the Innocents, in which the soldiers of Herod smash the children to the ground instead of cutting them down with swords, I have already shown was peculiar to Provence in early Christian times and to Gaul during the Carolingian period.¹⁸ Since the remains of the first martyrs were brought by Cassianus from Palestine to Provence during the first quarter of the fifth century, and since it was not until after the installation of their remains in Cassianus' church of St. Victor at Marseilles that their cult became established in the region, it is unlikely that the first example of the "smashing" Massacre on a sarcophagus cover in the church of St. Maximin, which was a dependency of St. Victor, dates before the end of the first quarter of the fifth century.¹⁹ At Rome, moreover, no special recognition was made of the Innocents until the sixth century, and the only representation there of the Massacre, on the arch mosaics of Santa Maria Maggiore, showed a symbolic rendering of the sword type. Therefore, inasmuch as I have elsewhere pointed out²⁰

²⁰ See p. 66.

wherein the iconography of the Massacre on the sarcophagus of St. Maximin is more primitive and earlier than either the Berlin or Milan scene, we have a *terminus post quem* of the first quarter of the fifth century for the execution of the Berlin and Nevers fragments.

The Baptism on the Berlin panel, although it offers little evidence regarding either the date or provenience of the original diptych, indisputably connects the fragment with the Milan and Werden ivories.²¹ The scene, with the exception of the nimbus on the head of Jesus, is practically identical with the same scene on the Milan covers. The presence of a nimbus on the head of Christ, which led Stuhlfauth to date the ivory after the Milan covers, has little or no bearing on the date, for it seems certain to me that it must have been added sometime after the ivory had been carved. In confirmation of this assumption it will appear, on careful observation, that the waves of the Jordan behind Jesus run straight across the nimbus, as if the nimbus were a circle inscribed on the ivory regardless of the background.

The Miracle of Cana represents the transitional or Alexandrian-Coptic type introduced from the East into the West sometime during the fifth century.²² At the end of the fourth century, when Haseloff supposes the Berlin ivory to have been carved, the Hellenistic type, wherein Jesus touches with His wand the jars of water and in which no servant is included, was faithfully followed on the sarcophagi of Rome. Moreover, this scene on the Berlin fragment, while of the same type as the scene on the Milan covers, depicts an earlier and simpler rendering of it.²³ Here again the nimbus is of little importance, for if the nimbus in the Baptism was added later it is presumable that this one on the head of Christ was also inscribed at a later date.

Viewed as a whole, then, the iconography shows that the Berlin and Nevers fragments, close enough in style to be parts of the same diptych, are so intimately related to the Milan book covers that they must have been executed in the same art centre, if not in the same atelier, as were the covers. Therefore, if the connection of the Milan covers with Provence has been established, the Provençal origin of the Berlin and Nevers panels is at once proved. Independently of this relation with the ivories already connected

²¹ See *The Baptism*, p. 76.

²³ See p. 91.

²² See *The Miracle of Cana*, p. 90.

with Provence, the combination scene of the two Adorations on the Nevers fragment and the "smashing" Massacre on the Berlin ivory show Provençal types which themselves fix the place of origin. As to the question of date, the iconography at once makes it clear that the two fragments are earlier than the Milan covers and at the same time are posterior to the first quarter of the fifth century. This date is suggested by the improbability that the Massacre of the Innocents would have been carved on an ivory of Provence before the cult of the Innocents was intro-

FIG. 164. NEVERS: MUSEUM, IVORY. THE NATIVITY AND ADORATION OF THE MAGI.

duced into the country during the first part of the fifth century.²⁴ Thus the iconography establishes the Provençal origin of the fragments and sets their execution somewhere between the first quarter of the fifth century and the beginning of the sixth century when the Milan covers were probably carved.

While it seems to me that the iconography offers the most conclusive evidence as to the date and provenience of the ivories, let us return to Haseloff's stylistic theory as to the fourth century date of the Berlin and Nevers fragment. It has already been admitted that an obvious gap separates the style of the two fragments from the style of the Milan covers. The difference is manifest in the more sketchy carving on the Milan covers, in the more intense and angular bodies and the more energetic movement of the figures. In other words, the work on the Berlin and Nevers frag-

²⁴ See p. 67.

ments is superior to, and therefore earlier than, the work on the book covers; it shows a superior execution, greater plastic sense, and a more classic handling of draperies. While earlier than the Milan covers, is the work also slightly anterior to the Probianus diptych (Fig. 165), as Haseloff asserts? Waiving the evidence as to date adduced above, I would say, "No." Although a marked likeness, and one that must be considered, exists between the two works in the flat backgrounds, in the build of the figures, in the shape of the heads, in the cut of the hair, and in the costumes, the style of the two fragments seems inferior to that of the Probianus diptych. They appear to represent a direct, though later, continuation or reminiscence of the better style that occurs on the Roman diptych; the figures are fatter, more stubby, and in certain cases are almost repulsively bloated.

Since the Berlin and Nevers fragments are no longer to be considered as Roman works, but as Provençal ivories, how can any stylistic similarity between them and a Roman diptych bear on their date? It is here that I feel that the attribution of the ivories to Provence removes the weak point in Haseloff's theory. His principal reason for setting the Berlin fragment at the end of the fourth century was the fact that after the beginning of the fifth century, when the Probianus diptych was carved, the work on Roman consular diptychs appears to have ceased and that, when they commenced to be carved again, their execution was coarse, crude, and hasty. It is this sudden cessation of Roman ivory carving that solves the problem and bridges the gap between Provence and Rome. For about a generation after the beginning of the fifth century artistic production stopped at Rome. Even before Alaric actually entered Rome in 410, fear drove away a large part of the population. All classes, though principally the patricians and the artisans, fled to other parts of the Empire. So complete was the flight of craftsmen and so slight was the inducement to return to Rome after the state had been freed from the invaders, that legislation was necessary to force the artists to return.²⁵ At this time sarcophagus carving practically stopped at Rome; and the craftsmen appear to have emigrated in great numbers to Provence, for about the beginning of the fifth century there sprang up a fully developed school of

²⁵ Frothingham, *Monuments of Christian Rome*, p. 52.

FIG. 165. BERLIN: MUSEUM, DIPTYCH OF PROBIANUS.

sarcophagus carvers at Arles who carried on the traditions of the Roman school.²⁶

The bearing of such an exodus of artists from Rome at the beginning of the fifth century upon the Provençal school is obvious. While the Berlin and Nevers fragments are Provençal because of their affinities with the Milan and Werden ivories from that region, we have also noted that these two fragments bear a marked similarity to early Roman ivory carving such as appears on the Probianus diptych of c. 400. Furthermore, the rather curious palmette ornament on the Milan covers and also on the Rouen diptych is similar to the moulding on the Symmachi and Probianus

FIG. 166. MARSEILLES: MUSEUM, SARCOPHAGUS.

diptychs. The conclusion to be deduced seems to satisfy all these problems. The ivory carvers of Rome, like the sarcophagus carvers, must have also fled to Gaul and have continued in that region many traditions of the imperial school. If the monastery of St. Victor, or even Marseilles, is accepted as the probable centre of this ivory school, it seems likely that the monastery, which was founded shortly after 414, or certainly the city, received some of these Roman artisans, who founded a local school. Sometime between the end of the first quarter of the fifth century and the end thereof, as the iconography would prove, these artists or their native pupils carved the diptych, or diptychs, of which there remain only the Nevers and Berlin fragments, the earliest examples of the Provençal group. While they preserved, instinctively, in this diptych the stylistic tradition of the Roman school before the year 410, they, at the same time, had to adapt themselves to the semi-Oriental taste of the

²⁶ See *The Orientalizing of Gaul*.

community. Therefore, in certain scenes they followed the newly composed and popular Pseudo-Matthew, executed a particular type of the Massacre of the Innocents created after their relics had been brought to Provence by Cassianus, and combined the Eastern iconography they found with the Hellenistic forms they had brought with them from Rome. Hence the confusing eclectic character of the ivories.

About all has been said in regard to the date of the Berlin and Nevers fragments that can be said; being earlier than the Milan covers and

FIG. 167. ST. MAXIMIN: SARCOPHAGUS.

posterior to the end of the first quarter of the century, they would date 425-500. Again, the style of the two fragments appears to be a little earlier than that of the Rouen diptych, which I dated between 450 and 475 A. D. The style on the Rouen diptych, while superior to the work on the Milan covers, seems closer to the more nervous work on the covers than to the heavy and stolid style of the Berlin and Nevers fragments. I have therefore assigned the fragments to a date c. 450; the bearing of this date on that of Pseudo-Matthew has already been pointed out (p. 191). The thickset character of the work on the fragments recalls in many ways a small class of sarcophagi in Provence. Certain sarcophagi from Marseilles²⁷ (Fig. 166), St. Maximin²⁸ (Fig. 167), Arles²⁹ (Fig. 168), and Vienne³⁰ show figures whose large hands, bloated dimensions, features and costumes are noticeably similar in general accent to the work on the Berlin and Nevers fragments. In the original diptychs (or diptych) of which these fragments were parts we find the first fruits of what I have called

the Provençal School of Ivory Carvers, and it is on the assumption that Roman ivory workers came to Provence that we may best explain the curious eclectic character of the work on the group.³¹

VII

IVORY BOOK COVER IN THE BODLEIAN LIBRARY, OXFORD

Book cover.	Oxford
Date. end of eighth or beginning of ninth century.	Bodleian Library.

In the Bodleian Library at Oxford is one leaf of a small diptych (Fig. 169) which, although it is a Carolingian work of the eighth or ninth century, is related to the Provençal school of ivories and has often been included in the group under discussion. This relation consists in its being a partial copy of the Provençal diptych of which the Berlin fragment was a part. A similar relation exists between the fragment of a Carolingian plaque at Munich and the Berlin ivory (see p. 64, note 15). The interest of this cover increases as its connection with Provence and its use of certain Alexandrian-Coptic types of scenes help to explain in what manner Oriental and so-called Syro-Egyptian motifs and iconographical types entered Carolingian and Ottonian art.¹

The cover is divided into twelve compartments, three on each side, which form a border about a large rectangular panel. Within this central panel the Redeemer, young and beardless, is depicted trampling under foot the lion and the dragon, the asp and the basilisk. In the small panels across the top of the cover, reading from left to right, are figured the Prophet Isaiah standing by a tree and holding a scroll inscribed with the

³¹ It is interesting to note that Dalton, *Byz. Art and Arch.*, p. 203, remarks that the Berlin and Nevers fragments are the earliest of the group.

¹ Sauerland and Haseloff, *Der Psalter Erzbischof Egberts von Trier*, 1901, pp. 104, 136.

words ECCE VIRG(O) CONCI(PIET),² and the scenes of the Annunciation and the Nativity. Continuing down the right hand side of the cover are carved the Adoration of the Magi, the Massacre of the Innocents, and the Baptism. Across the bottom, from right to left, are the Miracle of Cana, Christ Asleep in a Ship with Three Apostles on the Sea of Galilee, and the Raising of Jairus' Daughter. Reading up the left side of the cover are Christ Driving the Demons into the Herd of Swine, the Paralytic, and the Woman with an Issue of Blood.

It is curious that an ivory whose iconography so clearly establishes its provenience and in a general way its date should have been so poorly attributed as the Bodleian cover. Many writers have attributed it to Italy: Westwood³ and later Maskell⁴ have called it an Italian work of the ninth or tenth century; Durand⁵ has said that it was in the Roman style and could not be dated before the end of the eighth century; and Strzygowski⁶ has called it sixth century work from Ravenna. Stuhlfauth,⁷ realizing that there was something odd and apparently inexplicable about the ivory, declared that it was an "offenbare moderne Fälschung." Although he refrained from either dating or attributing the cover, Beissel⁸ said that it was a work done in the manner of the five part diptychs from Syria and Egypt, but was copied from a Roman or Gallic model of the fifth or sixth century. This analysis is remarkably near the truth, as is Haseloff's assertion that the Bodleian cover is a Carolingian ivory, to be connected with certain Carolingian ivories from Metz, and was copied from the "Roman" diptych of which the Berlin fragment was a part.⁹

Inasmuch as the Bodleian cover is not a member of the Provence group, I intend only to point out its connections with Provence and to discuss those scenes which prove its Carolingian origin. Much of the iconography on the cover, if not copied directly from the Provençal diptych, of which the Berlin fragment was a part, was derived either from the scenes on the

FIG. 169. OXFORD: BODLEIAN LIBRARY. IVORY BOOK COVER.

other Provençal ivories or from the scenes on the early Christian sarcophagi of Gaul. In the first place the three scenes on the Berlin fragment, the smashing type of the Massacre of the Innocents,¹⁰ the Provençal type of the Baptism,¹¹ and the Alexandrian-Coptic type of the Miracle of Cana,¹² occur in the same place and order on the Bodleian cover. Aside from a difference in style the Massacre and the Baptism on the two ivories are nearly identical, while the Miracle of Cana on the Carolingian ivory shows the jars increased from four to six after the customary number on Eastern monuments from the sixth century on. Furthermore, the Nativity¹³ and the Adoration¹⁴ on the cover recall by their rendering the same scenes on the Milan book covers. Other scenes on the ivory, like the Woman with an Issue of Blood and the Raising of Jairus' Daughter, were taken from the types on the sarcophagi of southern Gaul.¹⁵ It is not impossible, then, so far as the iconography of these scenes leads us, to consider the Bodleian book cover a Provençal ivory of the fifth century.

Turning to the distinctively Carolingian types on the cover, Christ Triumphant over the Four Beasts is the most valuable scene in establishing the date and origin of the ivory, and for this reason I have treated it separately.¹⁶ The results of this study of Christ Triumphant are clear and conclusive. The type itself originated in Alexandria and then, like other Alexandrian types, passed into Coptic art. Thence it must have been introduced directly into Gaul and subsequently transmitted into Carolingian art, for the developed type, where Christ tramples on the four beasts, outside the early Christian monuments of Egypt only occurs on the Frankish monuments of the Carolingian and Ottonian periods. The scene on the Bodleian cover, in its composition, its beardless type of Christ, and in its nervous draperies, finds its only convincing parallels in the miniatures of the Godescalc school and two Carolingian ivory book covers which, in their turn, are connected with this same Carolingian school of miniature painting. Therefore, on the basis of this scene alone the Bodleian cover appears to date from the end of the eighth century or the very beginning of the ninth and to have come from that centre in northern France where the famous Godescalc, Ada, and Soissons Gospels were executed.¹⁷

¹⁶ See *Christ Triumphant*, p. 146.

¹⁷ See p. 157.

Other scenes which attest the Carolingian workmanship are the Annunciation and the scene of Christ Asleep with Three Apostles on the Sea of Galilee. The two distinctive features in the scene of the Annunciation, wherein the Virgin is seated as the angel accosts her, are the female attendant who stands behind the Virgin, and the curious tower which rises at the right of the composition. While the Annunciation was frequently represented on the monuments of early Christian art, the attendant in the scene does not occur until the eighth or ninth century and then on Carolingian monuments. A Carolingian reliquary of the eighth century in the Sancta Sanctorum¹⁸ and another ivory of the tenth century in the Louvre¹⁹ figure an attendant behind the seated Virgin. Again in the type of the Annunciation with the standing Virgin, the first use of the attendant is on a Carolingian ivory in the Bibliothèque Nationale in Paris.²⁰ A miniature of the Soissons Gospels,²¹ a work of the Godescalc school, represents an Annunciation, which, with the one exception that the attendant does not appear in the composition, is noticeably close in other respects to the scene on the ivory; the pose and draperies of the Virgin and the form of the chair in which she is seated are about the same in the two examples.

While no examples of Christ Asleep in a Ship on the Sea of Galilee exist, to my knowledge, on any early Christian monuments, the scene occurs frequently in the manuscripts of the Ottonian period in northwestern Europe. These Ottonian examples, whose iconography was naturally derived in large measure from Carolingian monuments, are very similar to the rendering of the scene on the Bodleian book cover.²² While the scene seems to be absent from early Christian monuments, we have nevertheless the testimony of Perpetuus that it was represented in the fifth century on the walls of the church of St. Martin at Tours.²³

A summary of the iconographical types on the cover supports the conclusion indicated above. While the Carolingian character of the work is evinced by the scenes of Christ Triumphant, the Annunciation, and Christ

Asleep in a Ship, its connection with the Provençal ivories appears in the Nativity, the Adoration, the Massacre of the Innocents, the Baptism, and the Miracle of Cana. Further connection with the early Christian types of Provence lies in the Raising of Jairus' Daughter and in the scene of the Woman with an Issue of Blood, which both appear on Gallic sarcophagi. Besides the Carolingian and Provençal types, the cover presents in the scenes of Christ Triumphant, the Healing of the Paralytic, and the Miracle of Cana certain Alexandrian-Coptic types. These Egyptian types, arriving by the trade route which existed between Egypt and the ports of southern Gaul,²⁴ must have entered Provence through Marseilles, as Strzygowski has suggested in the case of Egyptian motifs appearing on the ivory pulpit of Aachen,²⁵ and were then transmitted through Merovingian times to Carolingian art.

It is interesting, in the light of these Egyptian types appearing on the ivories, to see how my iconographical deductions were already grasped in a general way by Beissel. While Haseloff claimed that the Bodleian cover was a Carolingian copy of a Roman ivory, Beissel recognized in the cover a Syro-Egyptian manner, but said that it had been copied from either a Roman or *Gallic model* of the fifth or sixth century. In discussing the Berlin fragment, which was the *fifth century* prototype for the Bodleian cover, I have shown how the Massacre of the Innocents and the Baptism on it were Provençal types, how the Miracle of Cana was an Alexandrian-Coptic type, and how the work resembles the Roman ivory carving of the beginning of the fifth century. The explanation of this curious mixture of Gallic and Egyptian types and a Roman style may well lie in the emigration of Roman ivory carvers, after the sack of Rome in 410, to Provence, where they commenced to work for a semi-Oriental population and consequently had to adopt many Eastern ideas and motifs. Thus my arguments for the Provençal origin of the Berlin fragment, from which the Carolingian ivory was partly copied, account for the conflicting and

²⁴ Besides the commercial and monastic affinities which united Marseilles and Egypt (see *Orientalizing of Gaul*, p. 195) Egyptians were numerous enough at Arles to have an oratory in honor of St. Menas (De Rossi, *Bull. di arch. crist.*, 1869, p. 32) and in Marseilles we have examples of the name Menas (Le Blant, *Inscript. chrét. de la Gaule*, 1865, II, p. 309, no. 551a; "Bonam requiem habeat in die futuro maritus meus Menas"); Cabrol, *Dictionnaire*, etc., s. v. *Ampoules*, col. 1727.

²⁵ Strzygowski, *Hell. und Kopt. Kunst.*, p. 69.

apparently inexplicable elements in the Bodleian cover which Beissel recognized and which probably led Stuhlfauth to call the work a forgery.

The style of the Bodleian cover confirms its attribution. The mouldings around the panels are conventionalized and crudely executed copies of the egg and dart and bead and reel mouldings on the Berlin fragment. The nervous drapery of the figures, which I have discussed more fully in my treatment of *Christ Triumphant*,²⁶ is the distinctly Carolingian feature of the style. Inasmuch as it is not as animated as the drapery of the Carolingian work of the later ninth and the tenth centuries and as it resembles very closely the form of drapery in the miniatures of the Godescalc school, I would date the work at the end of the eighth or beginning of the ninth century. This date is sustained by a comparison of the Bodleian cover with later Carolingian ivories. Although certain points of iconography associate the Bodleian ivory with two Carolingian book covers in the Bibliothèque Nationale at Paris,²⁷ which were probably carved at Metz,²⁸ the styles are entirely different. The two Paris ivories, which are very accomplished and pretentious pieces of ivory carving, can not be much, if any, earlier than the tenth century, while the poor modelling, the lack of animation in the figures, the comparatively mild drapery, and the rather hesitating execution of the Bodleian cover date it about a century earlier than the Paris examples.²⁹ Therefore the Bodleian ivory may be said to date from about 800 and to have been carved in that centre of northern France where the Godescalc school of miniaturists flourished.

TABLES

NOTE

In the Tables, a dash indicates the occurrence of the motif named at the head of the column in which the dash occurs. The addition of a circle to the dash indicates a nimbus; if the circle is crossed vertically, the nimbus is cruciform.
